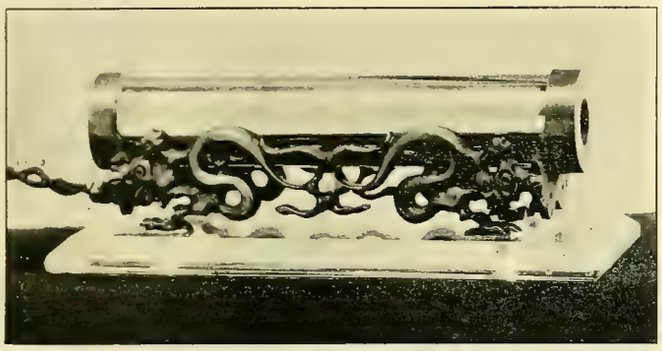
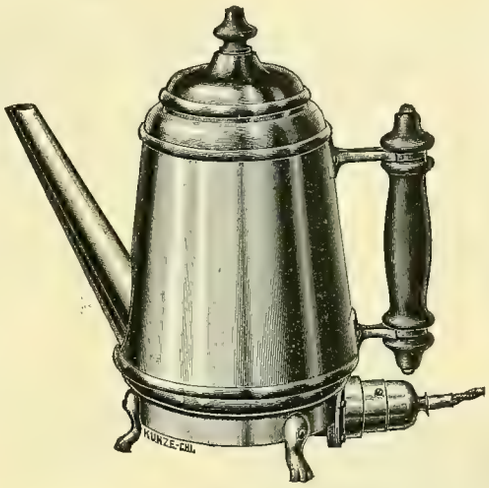
# Electric Heating and Cooking.



This Curling Tong Heater will be highly prized by the ladies. We have sold a number of them in Chicago and hear nothing but favorable comment. They are very artistically designed and handsomely mounted on beveled edged cut glass base. Any make of curling tongs can be used.



We also carry in stock Electric Coffee Pots, Pan-cake Griddles, Stew Pans, Chafing Dishes, Glue Pots, Laundry and Tailor's Irons. These articles are no longer in the experimental stage, and can be depended upon for practical and efficient service.

Our Electric Soldering Copper is the most successful one in the market. Takes only 50 watts. Has removable copper heads, so that any shape can be put on to suit the work in hand.

# CENTRAL STATION SUPPLY CONTRACTING STREET RAILWAY MEN!!

DEAR SIRS:—As the Fall and Winter seasons are now approaching, permit me to call your attention to an exceptional opportunity for the purchase of ARC LAMPS and CARBONS. The goods which I am offering **must be sold to close an estate** and I can offer them at figures which cannot be duplicated in the electrical trade.

These goods are of STANDARD MAKES, ENTIRELY NEW and in PERFECT ORDER, and the offer will not remain open long. They consist of STANDARD "WARD" ARC LAMPS FOR DIRECT AND ALTERNATING Current Circuits; also Series, Focusing, Double Carbon and Railway "WARD" Lamps. The "WARD" Lamp is the Arc Lamp which built up the business of Arc Lighting on Incandescent Circuits, and more of them have been sold than of all the other makes in this country.

I can offer also the "KNIGHT" ARC LAMP for both DIRECT and ALTERNATING Current Circuits, for series and railway work, and twin lamps. "Knight" Lamps are offered by several other parties, but it is not possible for them to give the low prices I quote.

I have also a large stock of FOREIGN and DOMESTIC CARBONS of the following types:

## Foreign--SIEMENS, LACOMBE, HARDTMUTH AND SHIP CORED.
## Domestic--NATIONAL, FIDELITY, SOLAR AND GLOBE.

Write me at once, stating kind, size and quantity you desire. Yours truly,

**CHAS. H. WATERMAN,** 1305 HAVEMEYER BUILDING, 26 Cortlandt St., NEW YORK.

**Sales Agent for Wm. T. Hamilton and John F. Randolph, Assignees for Francis R. Upton.**

**IF** you are anxious to secure the latest electrical books, **YOU** should write to the Electrician Publishing Co., Chicago. You **CAN'T** procure too many reliable, readable books to **READ.**

# EDDY GENERATORS.

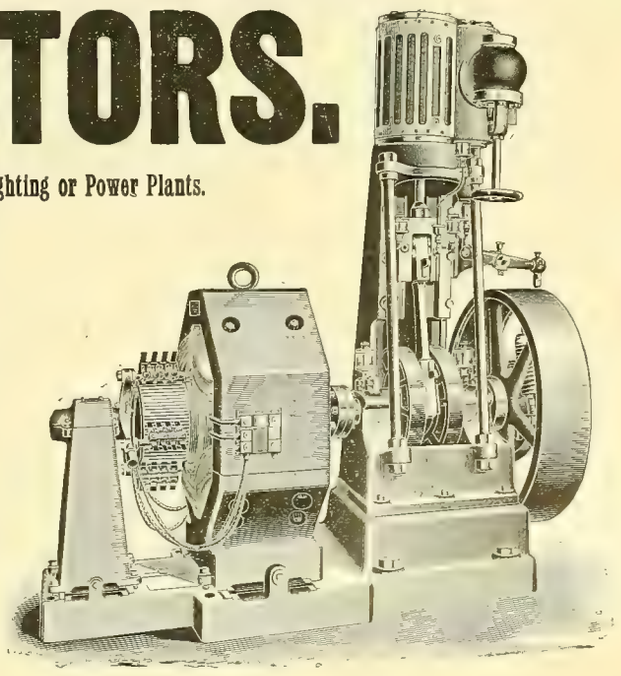
**Direct Connected or Belted for Electric Railways, Central Stations, Isolated Lighting or Power Plants.**

## EDDY MOTORS—SLOW, MEDIUM OR HIGH SPEED.

***We build all necessary apparatus for the transmission of Electrical Power through factory or other buildings.***

## THE EDDY ELECTRIC MFG. CO.,

***WINDSOR, CONN.***



NEW YORK, H. B. Coho & Co., Mail and Express Building.

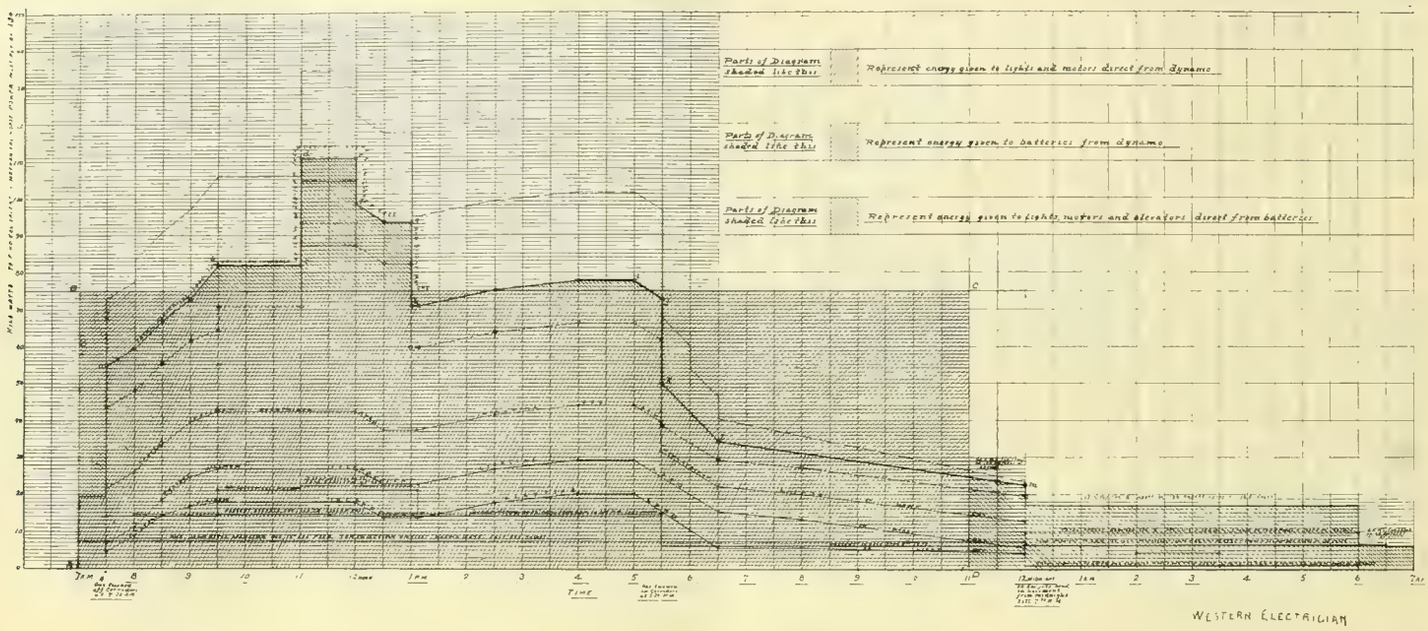
# STORAGE BATTERIES.



**LOAD DIAGRAM OF THE CHICAGO BOARD OF TRADE PLANT,**

Showing how **one** 75 K. W. Generator and Engine, working from 7 a. m. to 11 p. m., or 16 hours per day, **at their most economical load**, and standing idle from 11 p. m. till 7 a. m., operating in conjunction with **60 1600-Ampere Hour Pumpelly-Sorley Cells,** handle a variable load consisting of

**4 30 H. P. ELECTRIC ELEVATORS,**
**6 10 H. P. ELECTRIC MOTORS,**
**50 2000 C. P. ARC LIGHTS,**
**600 16 C. P. INCANDESCENT LAMPS.**

If you don't see how it is done, write us, and we will tell you.

---

TEN POINTS TO CONSIDER.

**A STORAGE BATTERY AUXILIARY**

Reduces the first cost of plant.
Enables the engines and generators to carry a steady load.
Raises the efficiency of the entire plant.
Removes the danger of sudden strains on machinery.
Puts down the running time.
Reduces "wear and tear" and depreciation.
Lowers operating expenses and labor account.
Effects a saving in the coal bills.
Insures a reserve in case of a break down.
Makes possible an increase in output, without an addition to generating plant.

These are not "fairy tales," but **facts from actual practice.** Write for information and estimates.

---

# Pumpelly-Sorley Storage Battery Co.,

**Main Office: 1540 MARQUETTE BLDG., CHICAGO, ILL.**

# THE ELECTRIC STORAGE BATTERY COMPANY

## OF PHILADELPHIA, PA.,

In addition to all American Patents heretofore controlled, has recently acquired from the

**Accumulatorem-Fabrik Aktien-Gesellschaft,**

OF HAGEN (IN WESTPHALIA), PRUSSIA.

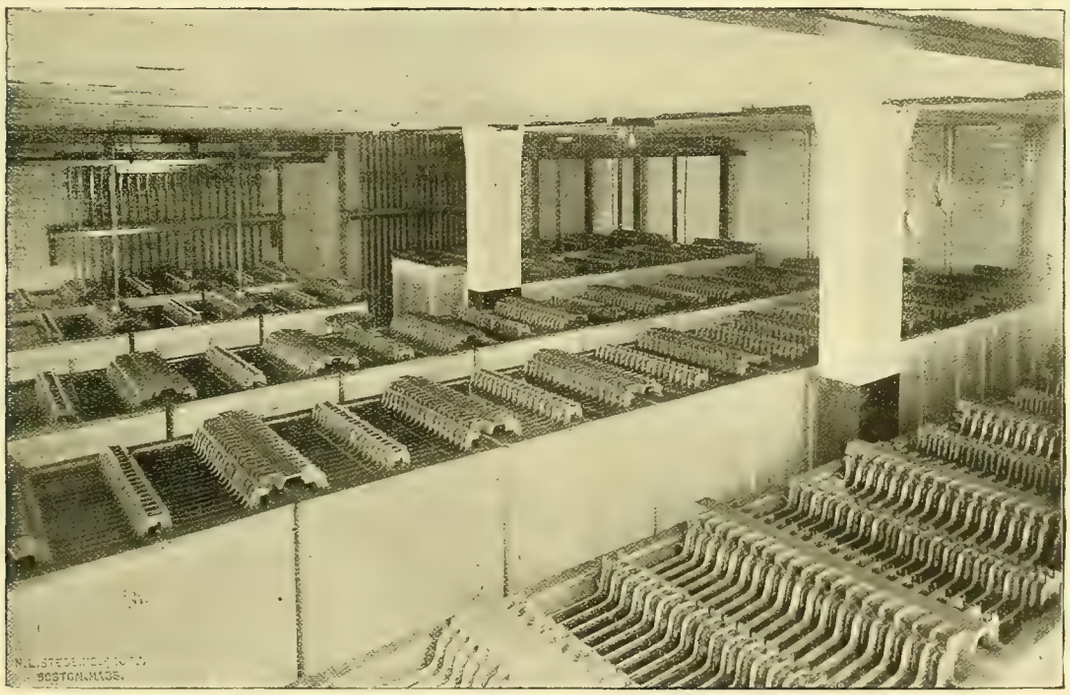
All patent rights for the exclusive manufacture of

# Tudor Storage Batteries

in the United States, and is prepared to furnish Batteries of this type of any desired size.

**In Germany and Austria** the TUDOR BATTERY is used in eighty per cent. (80%) of all Central Stations—besides being installed in

**15 RAILWAY POWER PLANTS and 5000 ISOLATED LIGHTING PLANTS.**



TUDOR STORAGE BATTERIES—BOSTON EDISON STATION.

**Storage Batteries are Needed in Central Stations:**

**1st.** To effect reduction in first cost of plant. (Half steam power plant and half Storage Battery Plant costs only three-quarters of what all Steam Plant would cost for same work.)
**2d.** To convert variable into steady loads. This will save machinery from strain.
**3d.** To effect a saving of from 20 per cent. to 40 per cent. in coal bills.
**4th.** To insure reserve power in case of accident to generating machinery.

For particulars address,

# THE ONLY REFLECTOR PLATE ALTERNATING ARC LAMP.

## The Helios Electric Company claims:

That they have more alternating arc lamps in use than all other makes combined.
They guarantee 80 per cent. more available light than is obtained from any other alternating arc lamp.
They guarantee to give as much light as any direct current lamp using the same number of watts.

# SPENCER'S IMPROVED ALTERNATING ARC LAMP

## Possesses the following advantages:

Minimum choke in the regulating coil.
Practically no energy absorbed in the regulating device.
Durability of all its parts; not liable to get out of order.
Can be used successfully on all periods.
Starts quickly.

# SPENCER'S DIRECT CURRENT CONSTANT POTENTIAL LAMP.

## Guaranteed not to see-saw.

## No. 11 DOUBLE GROOVE PONY INSULATOR.

**Can be Used for Transposing.**

The points or teats on the lower rim of the petticoat attracts the water on the outer surface of the insulator into drops. The water drops from these points on to the cross-arm, thereby preventing the moisture from creeping up on the inner petticoat, and thence to the pin. Owing to the great success of our Patent Teat Insulator in Telegraph Work, where the efficiency of the Insulator has proven to be more than twice that of the ordinary Insulator, we have concluded to apply the device to all Insulators for Telegraph, Telephone and Street Railway Work.

Standard Screw Glass Insulators,
Floor Insulators, Glass Break Knobs, Battery Jars, Arc Light Globes for all Systems,
Colored Glass Insulators to designate different currents.

THE

# "CLARK" WIRE.

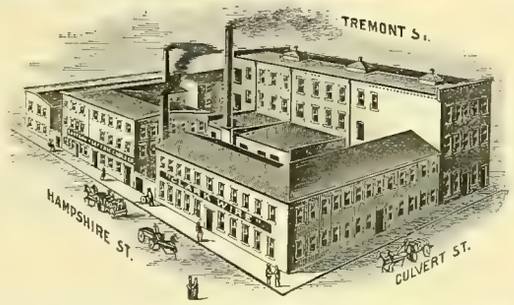
TRADE MARK.

For Switchboard, Railway and Motor use, we make all sizes of Stranded and Flexible Wire and Cables with Clark's Insulation.

The Clark Wire has been before the public and in use for the past nine years, and has met with universal favor. Thousands of miles of this wire have been sold, and are in use throughout the United States and Foreign Countries, and the demand for it is constantly increasing, because it always gives perfect satisfaction.

**BRANCH OFFICE:**

**1649, 1650, 1651 MONADNOCK BLDG.,**
**CHICAGO, ILLINOIS.**



**In a Letter from the Inspector of the Boston Fire Underwriters' Union, he states: "A Thoroughly Reliable and Desirable Wire in every respect."**

The Rubber used in insulating our Wires and Cables is especially chemically prepared, and will not deteriorate, oxidize or crack, and will remain flexible in extreme cold weather, and is not affected by heat.

We guarantee our Insulation wherever used, Aerial, Underground or Submarine, and our net prices are as low, if not lower, than any other first-class Insulated Wire.

We shall be pleased to mail Catalogues with Terms and Discounts for Quantities.

## LOCATIONS FOR INDUSTRIES.

The name of the Chicago Milwaukee & St. Paul Railway has long been identified with practical measures for the general upbuilding of its territory and the promotion of its commerce, hence manufacturers have an assurance that they will find themselves at home on the Company's lines.

The Company has all its territory districted in relation to resources, adaptability and advantages for manufacturing, and seeks to secure manufacturing plants and industries where the command of raw material, markets and surroundings will ensure their permanent success.

Mines of coal, iron, copper, lead and zinc, forests of soft and hard wood, quarries, clays of all kinds, tanbark, flax and other raw materials exist in its territory in addition to the vast agricultural resources.

The Chicago, Milwaukee & St. Paul Railway Company owns and operates 6,168 miles of Railway, exclusive of second track, connecting track or sidings. The eight States traversed by the Company, Illinois, Wisconsin, Northern Michigan, Iowa, Missouri, Minnesota, South Dakota, and North Dakota, possess, in addition to the advantages of raw material and proximity to markets, that which is the prime factor in the industrial success of a territory—a people who form one live and thriving community of business men, in whose midst it is safe and profitable to settle.

A number of new factories and industries have been induced to locate—largely through the instrumentality of this Company—at points along its lines. The central position of the States traversed by the Chicago, Milwaukee & St. Paul Railway, makes it possible to command all the markets of the United States. The trend of manufacturing is westward. Confidential inquiries are treated as such. The information furnished a particular industry is reliable. Address,

**LUIS JACKSON,**

Industrial Commissioner, C. M. & St. P. R'y,

appeared on the scene with an application for a patent on a microphonic transmitter, and according to the rules of the Patent Office no patent could be issued to any of the three until it was determined whether the Drawbaugh claim was valid or not. This was finally decided against Drawbaugh, as it was proved that the Edison carbon transmitter had been in public use for more than two years before Drawbaugh made his application for a patent, and his application was thrown out. A patent was then issued to Berliner on the broad

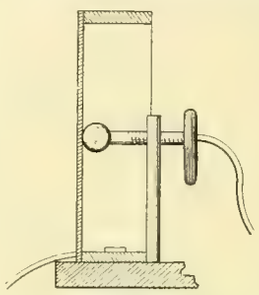

FIG. 44. BERLINER'S FIRST TRANSMITTER.

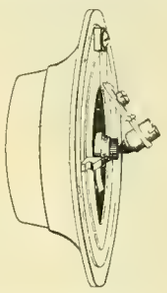

FIG. 45. BERLINER CARBON TRANSMITTER.

principle of the microphone transmitter in November, 1891. In May of the following year a patent was issued to Edison, so that both sides of the interference eventually got their patents—more than fourteen years after the filing of the original applications.

78. Both Berliner and Edison obtained in 1878 patents on special forms of transmitters designed in accordance with the principles laid down in their applications for the broad principle of battery telephones, and the Berliner transmitter especially has been modified out of all semblance to its original form. The broad claim in the Berliner patent is as follows: "The method of producing in a circuit electrical undulations similar in form to sound waves by caus-

**TESTIMONIALS.**

We submit among hundreds of others the following testimonials, and call attention to the fact that they are from expert electricians, managers of exchanges and superintendents of railroad telegraph.

"A whisper is distintly heard. We pronounce the Standard perfect." STEELE CO. (N. D.) TEL. Co.

"We talked to Rowell, 75 miles, through storm induction. Have discarded the Bell for Standard." PECOS IRRIGATION & IMP. CO., Eddy, New Mexico.

"Have used Cushman, Harrison and Bell, but consider the Standard far superior." C. A. ROOD, Reedsburg, Wis.

"I should recommend Standard to our people as against any other with which I am familiar. The test we gave was between St. Paul and Dickinson, 559 miles." O. C. GREENE, Supt. Telg. Northern Pacific Ry.

"Your instruments are working very nicely and every one exceedingly pleased with them. You will have all the business you can do." HOME TELEPHONE CO., Sioux City, Iowa.

"The Standard when known will knock out inferior instuments." U. J. FRY, Supt. Tel. C., M. & St. P. Ry.

"Better than any of the others we have." E. PENNINGTON, Supt. Tel. "Soo" Ry.

"Have given Standard extremely hard test where induction is heavy, with most satisfactory results. J. R. MICHAELS, Supt. Tel. St. Paul & Duluth Ry.

"The Standard will transmit a whisper or a shout with equal clearness." HUMPHREY JONES, Washington C. H., Ohio.

"Their efficiency and working is perfect. We shall use nothing but Standard." GALLAGHER BROS. Meridian, Miss.

ELECTRICIAN PUBLISHING COMPANY,

6 Lakeside Building, Chicago.

## Continuous Current Dynamos and Motors:

THEIR THEORY, DESIGN, AND TESTING.

With Sections on Indicator Diagrams, Properties of Saturated Steam, Belting Calculations, Etc.

AN ELEMENTARY TREATISE FOR STUDENTS.

By FRANK P. COX, B.S.

Cloth. 271 Pages, 83 Illustrations. Price $2.00.

Intended for students, this work gives the theory and design of continuous current dynamos and motors as understood and practiced in the designing-room, and the methods of testing described are those of the factory testing-shop. The practical side of the various questions treated is always kept in view, discussions having little bearing in this direction being excluded, and the higher branches of mathematics avoided. The application to the design of armatures, field-magnets and motors of the principles developed is explained by reference to numerical problems, thus thoroughly impressing them on the student's mind. Methods of testing a complete machine and of investigating its characteristics are given, with discussions on the effect of various changes in design and operation. The steam-engine being so closely allied to the testing and operation of dynamos and motors, sections on indicator diagrams, steampower calculations, and belting are included. Almost all of the numerous curves in the book are derived from actual commercial tests.

CONTENTS.

Chapter I. The Absolute System of Measurement.—Chapter II. Electro-Magnetic Induction.—Chapter III. Classification of Machines and General Principles of the Magnetic Circuit.—Chapter IV. The Dynamo as a Motor.—Chapter V. Calculations Pertaining to the Magnetic Circuit.—Chapter VI. Theory of Windings, Losses, etc.—Chapter VII. The Dynamo Considered as a Motor.—Chapter VIII. Design of Armatures.—Chapter IX. Design of field-magnets.—Chapter X. Design of Motors.—Chapter XI. Dynamo and Motor Testing.—Chapter XII. Efficiency Tests.—Chapter XIII.—Indicator Diagrams.—Chapter XIV. Steam-Engine Calculations.—Appendix I. Tests of Iron.—Appendix II. Ampere Turntables.—Appendix III. Determination of Sizes of Wire for Armatures and Field Coils.—Appendix IV. Belting.

# Progress the Order of the Age.

## THE NEW AMERICAN LEADS.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickman, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

**Westinghouse Electric & Mfg. Company's Advertisement in the *"WESTERN ELECTRICIAN"* of July 27, 1895.**

Our new factory at East Pittsburg is now completed, and our facilities for manufacturing electrical apparatus for lighting and power purposes of all kinds are unsurpassed. We have made important additions to our equipment of machine tools, and are prepared to maintain and even strengthen the recognized reputation of the Company for excellence of mechanical design and construction, combined with the highest electrical efficiency.

We are the sole owners of the Tesla Polyphase System of electrical power transmission —the only practical and economical method in successful operation. This system is used to drive the machinery in our new works, where inspection of its workings is invited. It is the system adopted by the Cataract Construction Company for the great plant at Niagara Falls.

We are the pioneers of the alternating current system of central station incandescent and arc lighting in America—a result largely due to the excellent mechanical design and construction of our apparatus. In electric railway work the superiority of our multipolar generators, improved motors and controllers, and general power station apparatus, is recognized by the owners and managers of the most successful electric railways.

Our manufacture of smaller electrical appliances, such as Converters, Shallenberger Meters, Sawyer-Man Incandescent Lamps, Fan Motors, Direct Current Stationary Motors, Wurts' Non-Arcing Lightning Arresters, Ammeters, Voltmeters, Cut-Outs, Circuit Breakers, etc., etc., is recognized as standard throughout the electrical trade.

**General Electric Company's Advertisement in the *"WESTERN ELECTRICIAN"* of September 21, 1895.**

Our factories at ——— are the most extensive electrical factories in the world, and our facilities for manufacturing electrical apparatus for lighting and power purposes of all kinds are unsurpassed. We have made important additions to our equipment, machinery and tools, and are prepared to maintain our recognized reputation for the excellence of the mechanical design and construction of our apparatus, combined with the highest efficiency.

By our ——— and ——— electric power transmission to near or distant points is rendered practicable. These are the only commercial economical methods in successful operation.

We are the pioneers of all systems of central station and isolated incandescent and arc lighting, throughout the country, and still remain the foremost—a result due to the great inventors associated with us from the start, and the excellent mechanical design and construction of our apparatus. In electric railway work the superiority of our multipolar generators, motors, series parallel controllers and general station apparatus is so recognized by owners and managers of the most successful railways in this country that they are considered the standard to which all other makes are compared.

Our smaller electrical appliances, such as Transformers, Recording Watt Meters, ——— Incandescent Lamps, Fan Motors, Lightning Arresters, Ammeters, Voltmeters, Porcelain Cut-Outs and Switches, Circuit Breakers, etc., are recognized as the standard throughout the world.

**The above advertisements are submitted to all intending purchasers of Electrical Apparatus. The Westinghouse Electric & Mfg. Company has always maintained its position as the leading electrical company in this country, and the fact that even our advertisements are copied by our competitors is excellent testimony of our assertion.**

**DRY BATTERIES.**

BEST OF ALL IS **THE STANDARD,**

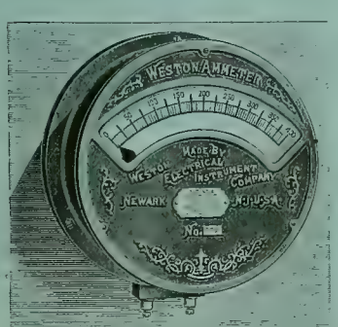
Made by J. H. BUNNELL & CO., 76 Cortlandt St., New York.

Best Construction and Ingredients. Strongest, most Durable and Reliable. Size 6x2½, 60 cts per cell.

LIBERAL DISCOUNTS.

**WESTON Electrical Instrument Co.,**

114 120 William St., NEWARK, N. J., U. S. A.



Weston "Round Pattern" Ammeter, Type F.

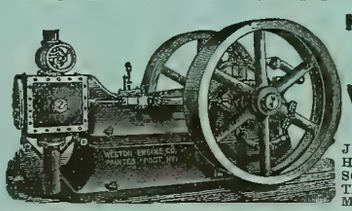
We desire to call attention to a line of **cheap** but excellent Switchboard Instruments for Direct Current Circuits, which we designate as

"Round Pattern," Style F.

These Instruments are particularly suitable for Isolated Plants and Feeder Circuits in Railway and Power Plants. Voltmeters in ranges from 3 to 750 volts. Ammeters in ranges from 1 to 2,500 amp. All Weston Instruments are unsurpassed in excellence of workmanship, in accuracy and economy of operation.

Mention the WESTERN ELECTRICIAN when writing for catalogues.

**WESTON ENGINES.**



High Pressure Boilers.
Complete Power Plants.

Estimates and Drawings Submitted.

WESTON ENGINE CO., PAINTED POST, N. Y.

# CENTRAL STATION SUPPLY CONTRACTING STREET RAILWAY MEN!!

DEAR SIRS:—As the Fall and Winter seasons are now approaching, permit me to call your attention to an exceptional opportunity for the purchase of ARC LAMPS and CARBONS. The goods which I am offering **must be sold to close an estate** and I can offer them at figures which cannot be duplicated in the electrical trade.

These goods are of STANDARD MAKES, ENTIRELY NEW and in PERFECT ORDER, and the offer will not remain open long. They consist of STANDARD "WARD" ARC LAMPS FOR DIRECT AND ALTERNATING Current Circuits; also Series, Focusing, Double Carbon and Railway "WARD" Lamps. The "WARD" Lamp is the Arc Lamp which built up the business of Arc Lighting on Incandescent Circuits, and more of them have been sold than of all the other makes in this country.

I can offer also the "KNIGHT" ARC LAMP for both DIRECT and ALTERNATING Current Circuits, for series and railway work, and twin lamps. "Knight" Lamps are offered by several other parties, but it is not possible for them to give the low prices I quote.

I have also a large stock of FOREIGN and DOMESTIC CARBONS of the following types:

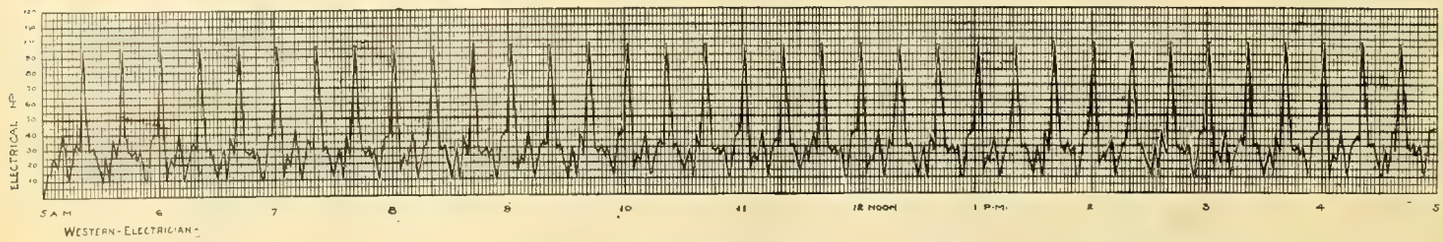
## Foreign--SIEMENS, LACOMBE, HARDTMUTH AND SHIP CORED.
## Domestic--NATIONAL, FIDELITY, SOLAR AND GLOBE.

Write me at once, stating kind, size and quantity you desire. Yours truly,

**CHAS. H. WATERMAN,** 1305 HAVEMEYER BUILDING, 26 Cortlandt St., NEW YORK.

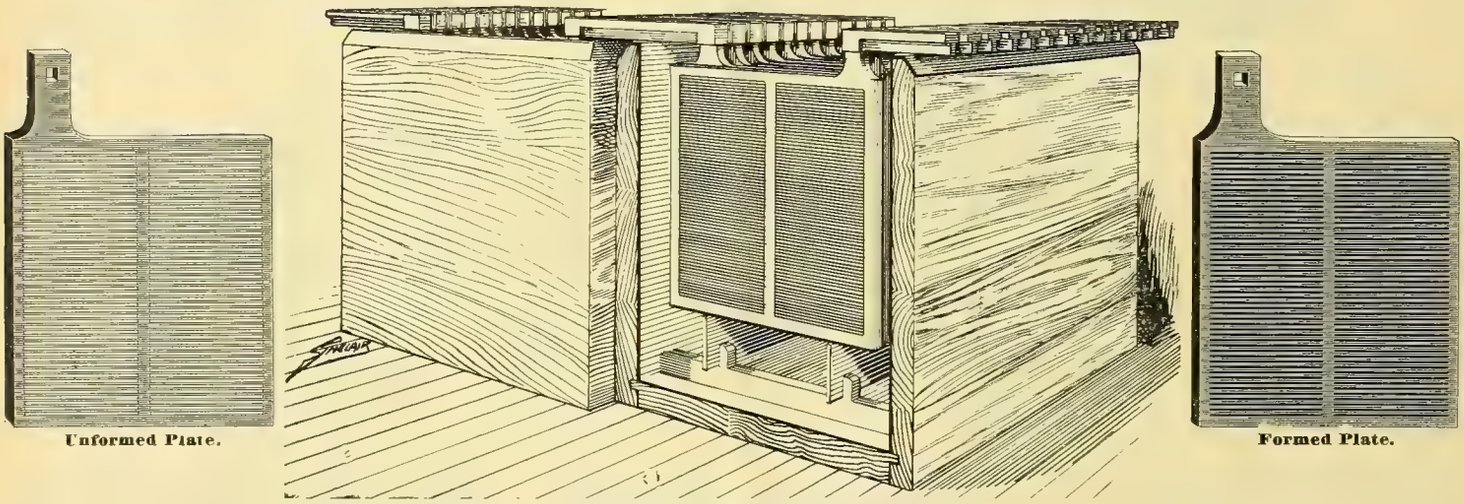
**Sales Agent for Wm. T. Hammer and John F. Randolph, Assignees for Francis R. Upton.**

# STORAGE BATTERIES.



**Load diagram of the St. Joseph and Benton Harbor, Mich., Street Railway Company's Plant,** showing how the load varies from an average of 40 H. P. to a maximum of 120 H. P. every 20 minutes, owing to a car reaching a heavy grade at 20-minute intervals. By installing **240 200-Ampere Hour Pumpelly-Sorley Storage Batteries,** the "**load line will be evened up**" and the road will be operated by one 50 H. P. engine, instead of keeping an engine of 250 H. P. in constant operation, as is now done in order to meet the maximum demand. Results: steady load; greater plant efficiency; no strain on machinery; reduced depreciation and **lower coal bills.**

## A "Storage Battery Auxiliary" will do the same for most Electric Railway Plants.



Unformed Plate.

Pumpelly-Sorley Central Station Cell.

Formed Plate.

## Why the Pumpelly-Sorley Battery is Superior to Any Other Storage Battery on the Market:

1st. Because each **plate or electrode** is made from **one integral piece of rolled lead.**
2d. Because the plates are without **joints or solder.**
3d. Because no "active material" or "paste" is applied to the plate to drop off under heavy discharge.
4th. Because the **lead oxide,** filling the interstices of the charged plate, **is formed from the plate itself,** by an electro-chemical process.
5th. Because its initial electromotive force is sustained during nearly its entire period of discharge.
6th. Because it has a **higher efficiency.**
7th. Because it has a **greater durability.**
8th. Because it gives **entire satisfaction** wherever used.

**WRITE FOR INFORMATION AND ESTIMATES.**

# Pumpelly=Sorley Storage Battery Co.,

**Main Office: 1540 MARQUETTE BLDG., CHICAGO, ILL.**

# THE ELECTRIC STORAGE BATTERY COMPANY

## OF PHILADELPHIA, PA.,

In addition to all American Patents heretofore controlled, has recently acquired from the

## Accumulatorem-Fabrik Aktien-Gesellschaft,

OF HAGEN (IN WESTPHALIA), PRUSSIA.

All patent rights for the exclusive manufacture of

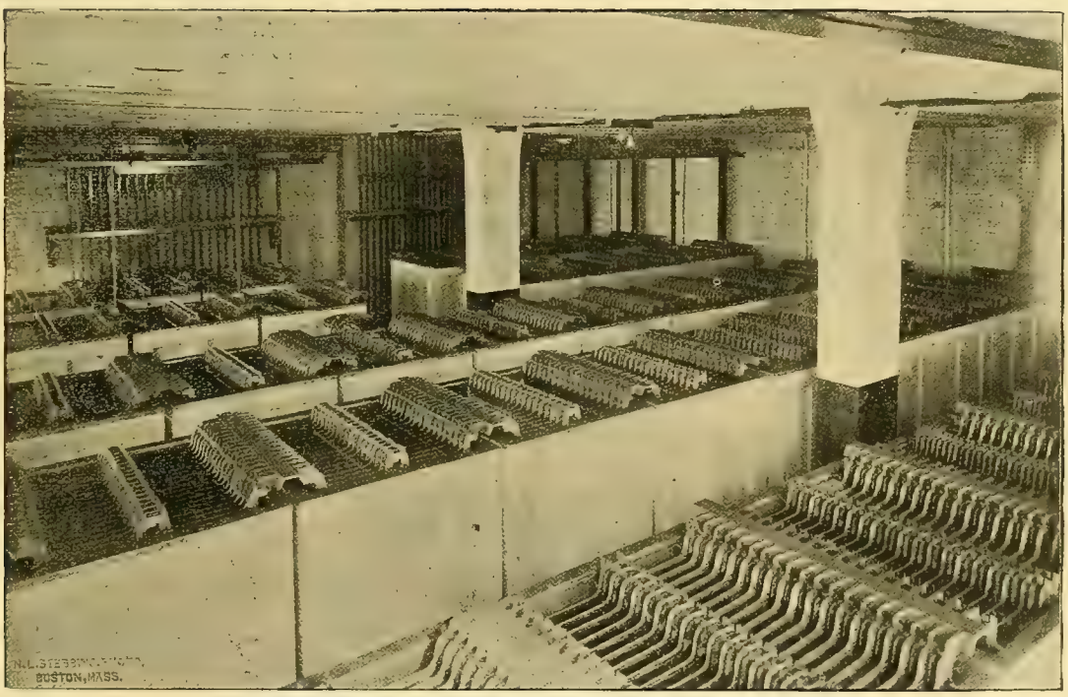
# Tudor Storage Batteries

in the United States, and is prepared to furnish Batteries of this type of any desired size.

---

**In Germany and Austria** the TUDOR BATTERY is used in eighty per cent. (80%) of all Central Stations—besides being installed in

## 15 RAILWAY POWER PLANTS and 5000 ISOLATED LIGHTING PLANTS.



TUDOR STORAGE BATTERIES—BOSTON EDISON STATION.

**Storage Batteries are Needed in Central Stations:**

**1st.** To effect reduction in first cost of plant. (Half steam power plant and half Storage Battery Plant costs only three-quarters of what all Steam Plant would cost for same work.)
**2d.** To convert variable into steady loads. This will save machinery from strain.
**3d.** To effect a saving of from 20 per cent. to 40 per cent. in coal bills.
**4th.** To insure reserve power in case of accident to generating machinery.

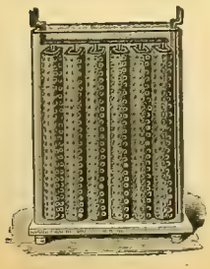
# The Ohio Storage Battery Company,



**Sole Manufacturers, under Exclusive License, of the Ford-Washburn Storelectro Co.'s Storage Batteries:** **The most durable Batteries ever produced. For Street Railways, Lighting Plants, Electric Launches, Electric Carriages, Doctors and Dentists; and for any other work where Storage Batteries can be used.**

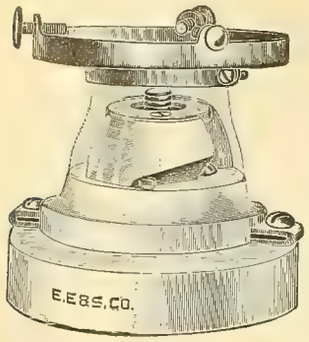
**SPECIALTIES:** Isolated Plants for house lighting, and cells for surgical, telegraph, telephone and phonographic uses. Small cells made to order. Send for catalogue giving capacities, weights, etc.

**MAIN FEATURES OF THE CELL:** **The ability to stand an incessant charge and discharge without any injury, which is an advantage that cannot be exaggerated; the capability of enduring a repeated discharge on a dead short circuit without injury to the cells; the special form of cell which frees it from the weaknesses that have made other types a failure.**

**EASTERN OFFICE: 203 Broadway, New York City. J. A. MACHADO, Agent.**

## THE OHIO STORAGE BATTERY CO.,

52 WADE BUILDING, CLEVELAND, OHIO, U. S. A.



# E. E. & S.

## RECEPTACLE FOR SHADE HOLDER.

Double pole. Easily fused. No wiring to the socket. Contact made direct on the rosette ears. Top porcelain is interchangeable, and will fit any one of our different styles of rosette bases.

# Electric Engineering and Supply Company,

New York Office: THAMES BUILDING. SYRACUSE, N. Y.

## Heating by Exhaust Steam,

WITHOUT BACK PRESSURE,

BY THE VACUUM SYSTEM.

ADVANTAGES.

1st.—Can be attached to existing plants at little expense.

2nd.—Effects greatest efficiency from the heating surface by the removal of the water and air, preventing water hammer and stagnant circulation.

3rd.—Saves coal by removal of back pressure from engines; water of condensation, etc.

We are owners of the patent and have equipped the largest plants in the United States; over 500 now in use. Will visit your plant and tell you how much we can benefit you, if you so desire. Send for catalogue P.

We Guarantee Protection to All Customers

TESTIMONIALS.

We submit among hundreds of others the following testimonials, and call attention to the fact that they are from expert electricians, managers of exchanges and superintendents of railroad telegraph.

"A whisper is distintly heard. We pronounce the Standard perfect." STEELE CO. (N. D.) TEL. CO.

"We talked to Rowell, 75 miles, through storm induction. Have discarded the Bell for Standard." PECOS IRRIGATION & IMP. CO., Eddy, New Mexico.

"Have used Cushman, Harrison and Bell, but consider the Standard far superior." C. A. ROOD, Reedsburg, Wis.

"I should recommend Standard to our people, as against any other with which I am familiar. The test we gave was between St. Paul and Dickinson, 559 miles." O. C. GREENE, Supt. Telg. Northern Pacific Ry.

"Your instruments are working very nicely and every one exceedingly pleased with them. You will have all the business you can do." HOME TELEPHONE CO., Sioux City, Iowa.

"The Standard when known will knock out inferior instuments," U. J. FRY, Supt. Tel. C., M. & St. P. Ry.

"Better than any of the others we have," E. PENNINGTON, Supt. Tel. "Soo" Ry.

"Have given Standard extremely hard test where induction is heavy, with most satisfactory results. J. R. MICHAELS, Supt. Tel. St. Paul & Duluth Ry.

"The Standard will transmit a whisper or a shout with equal clearness." HUMPHREY JONES, Washington C. H., Ohio.

"Their efficiency and working is perfect. We shall use nothing but Standard." GALLAGHER BROS., Meridian, Miss.

CORRESPONDENCE SOLICITED.

THE

# ARC LAMPS

—MANUFACTURED BY THE—

## Auerbach=Woolverton Electric Company

Embody the following ADVANTAGES:

Shortest Lamp on the market with longest life.
Stationary Arc.
Short-circuiting absolutely impossible.
Will never take more current than they are built for.
Will not see-saw.
Always start with proper size arc.
Variations in the voltage [of power and railway circuits] have no effect on the proper working of the Lamp.
Perfect insulation in all its parts.
Feeding mechanism is acknowledged to be the best ever constructed.
Our 14-hour Lamp is 33 inches long over all.

---

We make a specialty of Short Lamps for low=ceiling stores.

We manufacture Lamps for Direct and Alternating Currents (high and low tension) and railway circuits.

The above claims can be readily substantiated by a trial.

We make our Lamps in plain and ornamental styles.

Other particulars and prices on application.

---

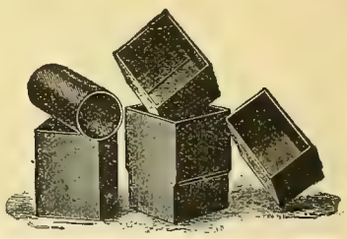
J. Frank Dunbar, Treasurer,

## NEWTON RUBBER CO.,

87 Summer St., Boston Mass.



# The S. K. C. Two Phase Alternating Current System.

THE FIRST AND ONLY COMPLETE AND PERFECTED SYSTEM BY WHICH LIGHT AND POWER CAN BE SUPPLIED FROM THE SAME GENERATOR AND CIRCUITS. POWER TRANSMISSION AND DISTRIBUTION MADE PRACTICAL AND COMMERCIALLY SUCCESSFUL.

## POINTS OF SUPERIORITY:

Our system is much more simple and consequently more durable than any other, either direct or alternating.

Our generator is much more efficient than any other alternator, requires less attention and absolutely no supplies except lubricant for bearings.

It is practically self-regulating without the loss of energy involved by compounding or compensating. Other multiphase machines require a balance of load.

We have entirely eliminated from our generators the usual sources of trouble, expense and interruption of service: i. e., the revolving armature, commutator, collector rings, brushes, etc.

They can be built for any voltage from 110 for isolated lighting to the high voltages required for power transmission work; in latter case doing away with the expense and loss of step-up transformers; the usual central station machine can be connected at will for either 1,000 or 2,000 volts.

The motors excel in simplicity of construction; in starting torque and simplicity of starting device; in efficiency in the manner in which they take current in proportion to their load, and in uniformity of speed under different conditions of load.

Our transformers insure satisfactory service and the greatest economy. We are prepared to fill all orders promptly, and carry a full stock of transformers in Chicago.

**Patents**—Our apparatus is novel, different from anything heretofore made, and covered by patents that fully protect us and our customers. We are not infringing patents belonging to others, and shall avail ourselves of the patents under which we operate to protect ourselves from piracy by other manufacturers.

**A complete stock of parts for "Ward Lamps" at reduced prices, and all styles of arc lamp globes.**

**Having purchased from the receiver all the stock of the Electric Construction & Supply Company, I will continue the business, giving prompt attention to all orders.**

# O. B. Greene,

## 14 Cortlandt Street, New York.

## THE ONLY

# Reflector Plate Alternating Arc Lamp.

**The Helios Electric Company claims:**

That they have more alternating arc lamps in use than all other makes combined.

They guarantee 80 per cent. more available light than is obtained from any other alternating arc lamp.

They guarantee to give as much light as any direct current lamp using the same number of watts.

## Spencer's Improved Alternating Arc Lamp

**Possesses the following advantages:**

Minimum choke in the regulating coil.
Practically no energy absorbed in the regulating device.
Durability of all its parts; not liable to get out of order.
Can be used successfully on all periods.
Starts quickly.

## Spencer's Direct Current Constant Potential Lamp.

**Guaranteed not to see-saw.**

The Heine Boiler Co.,
St. Louis, Mo.
Dear Sirs:--
We enclose check for amount of bonus due you by reason of your having exceeded the amount of evaporation guaranteed in your contract. We had expected the situation as to payment to have been reversed, especially as you guaranteed nearly half a pound greater evaporation than your competitors, and as it had been predicted, by all the furnace men to whom we had spoken, that you would be unable to fulfill your guarantee with plain grates.
Yours truly,
The J. Walker Brewing Co
Chas. Andrew Sec'y.

OUR BOOK,
"HELIOS,"
IS A VALUABLE REFERENCE BOOK.
SENT FREE TO ENGINEERS.

# Another Bonus Check.

We guaranteed to evaporate 10¼ lbs. water per pound of Pittsburg coal. We showed 10¾ lbs.

We will guarantee you the same, under heavy forfeit for failure.

# Progress the Order of the Age.

## THE NEW AMERICAN LEADS,

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Stickman, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

## CALIFORNIA EXCURSIONS.

**PERSONALLY CONDUCTED.**

Leave Chicago via the Burlington Route (C. B. & Q. R. R.) every Wednesday at 6.35 p. m. Route via Denver, Denver & Rio Grande Ry. (the scenic line) and Salt Lake City. These excursions are accompanied by an experienced agent of the Burlington Route, thoroughly familiar with California. The latest model of Pullman tourist sleeping cars are used. They are fitted with every comfort; carpets, upholstered seats, mattresses, pillows, bed linen, toilet rooms, etc. They lack only some of the expensive finish of the Pullmans run on the limited express trains, while the cost per berth is only about one-third. Ask your nearest ticket agent for particulars and descriptive folders, or write to T. A. Grady, Manager Burlington Route Excursion Bureau, 211 Clark Street, Chicago, Ill.

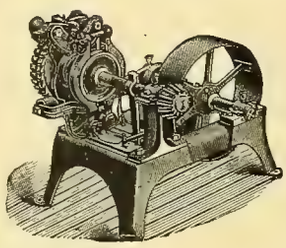
---

# Going to California.

The Burlington Route is the only railway running "Personally Conducted" Excursions via Denver to Colorado Springs, Salt Lake, Ogden, Sacramento, San Francisco, Stockton, Merced, Fresno, Bakersfield, and Los Angeles at the lowest rates and without change of cars.

Leave Chicago every Wednesday. Write or call on T. A. Grady, Excursion Manager, 211 Clark Street, Chicago

---



# WATER-POWER

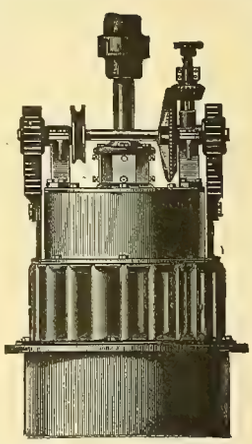
## GOVERNED FOR ELECTRICAL WORK.

The limit of government of water-power is often determined by the design and construction of plant. Consult us if possible before completing your plans.

With **REPLOGLE'S COMPOUND REGULATORS** we are prepared to undertake and **guarantee** the government of water-power for all purposes, including **Electric Railway, Power and Lighting Plants.** We make and sell all of Replogle's Electrical and Mechanical Governors and other devices for the government of water-power. Expert advice furnished on application. If results of your present system are not satisfactory, write us. Address all inquiries to

**THE REPLOGLE GOVERNOR WORKS,**
MARK A. REPLOGLE, Chief Engineer. **AKRON, OHIO.**

---



# THE McCORMICK TURBINE,

**On Vertical or Horizontal Shaft, Especially Adapted for Electric Work.**

**Gives more power as to diameter with a higher percentage of useful effect than any other water-wheel heretofore made.** All sizes, right and left hand, are built from patterns perfected under systematic tests in the Holyoke Testing Flume.

Parties having power plants which are unsatisfactory, and those contemplating the improvement of powers, will find it to their interest to confer with me, **as I am willing to guarantee results where others have failed, no matter what make of turbine has been in use. STATE REQUIREMENTS AND SEND FOR CATALOGUE.**

**S. MORGAN SMITH, York, Pa.**

**Estimates furnished for complete power plants and results guaranteed.**

---

**FUSE WIRE AND LINKS FOR ALL SYSTEMS.** } Correct Carrying Capacity. Absolutely Uniform.

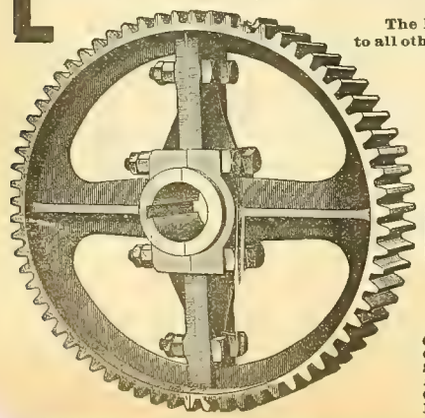
**The Independent Electric Co.,**
**39th St. and Stewart Ave., Chicago.**

---

# Electric Railway Supplies,

## GEARS, PINIONS, BEARINGS, TROLLEYS, TROLLEY WHEELS AND HARPS.

The largest and most prosperous street railway companies in the country are using our supplies, and they prefer them to all others on account of greater strength and durability. Correspondence Solicited.



This is the Improved Nuttall Trolley.

Try it once, and you will want no other.

# STORAGE BATTERIES.

## *ARE YOU POSTED?*

## CENTRAL STATION MEN

**DO YOU KNOW**

That a "Storage Battery Auxiliary" will help your plant over "that high point in the load line;" will insure a reserve in case of a break down; will make your entire plant more efficient; will make your service more reliable; will cut down your running time; will reduce depreciation; will lower operating expenses, and will save your coal?

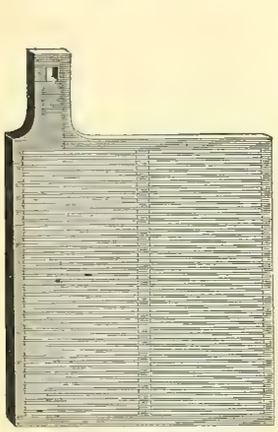
**?**

## ELECTRIC RAILWAY MANAGERS

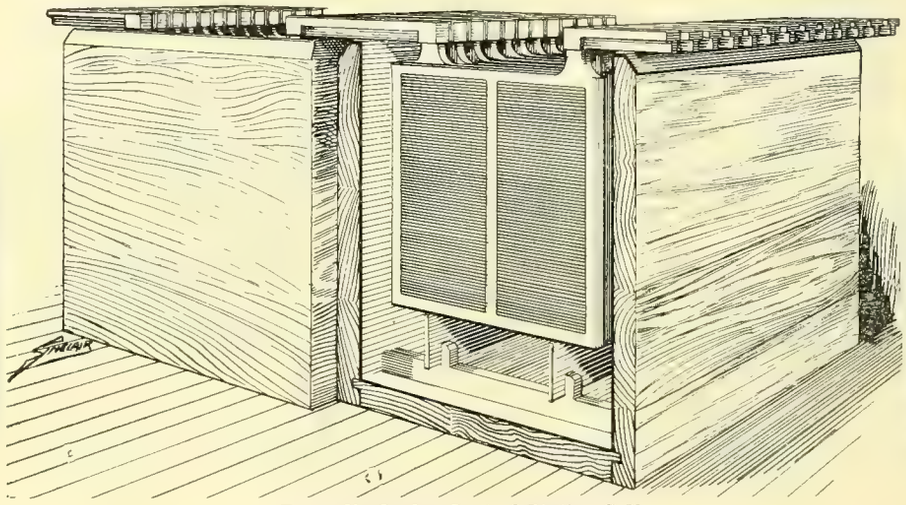
**DO YOU KNOW**

That a Storage Battery Auxiliary will effect a reduction in the first cost of plant; will convert a variable load into a steady load; will remove the danger of sudden strain on machinery; will reduce "wear and tear," and will increase the efficiency of your entire plant?

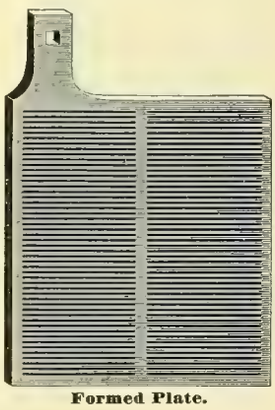
**?**



Unformed Plate.



Pumpelly-Sorley Central Station Cell.



Formed Plate.

**DO YOU KNOW**

That the **PUMPELLY SORLEY STORAGE BATTERY** is **superior to any other Battery on the Market,** because it is **stronger mechanically,** has a **higher efficiency,** and a **greater durability?**

**?**

## ELECTRICAL SUPPLY MEN

**DO YOU KNOW**

That there is a constantly increasing demand for a reliable Storage Battery from Dentists, from Physicians, for Fan Motors, for Phonographs, for Kinetoscopes, for Ventilating Fan Motors, for Sewing Machines, for Jewelers' Lathes, for Automatic Apparatus, for Laboratory Work, for Annunciators, for Gas Engines, for Telephones, for Block Signals, for Isolated Lighting Plants, for Carriage Illumination, for "Oarless Boats," Electric Launches, and "Moto-cycles?"

**?**

**"UP TO DATE"** Electrical men are posting themselves on the Storage Battery. Better write us AT ONCE for information. We like to answer questions.

# Pumpelly=Sorley Storage Battery Co.,

**Main Office: 1540 MARQUETTE BLDG., CHICAGO, ILL.**

# THE ELECTRIC STORAGE BATTERY COMPANY

## OF PHILADELPHIA, PA.,

In addition to all American Patents heretofore controlled, has recently acquired from the

**Accumulatorem-Fabrik Aktien-Gesellschaft,**

OF HAGEN (IN WESTPHALIA), PRUSSIA.

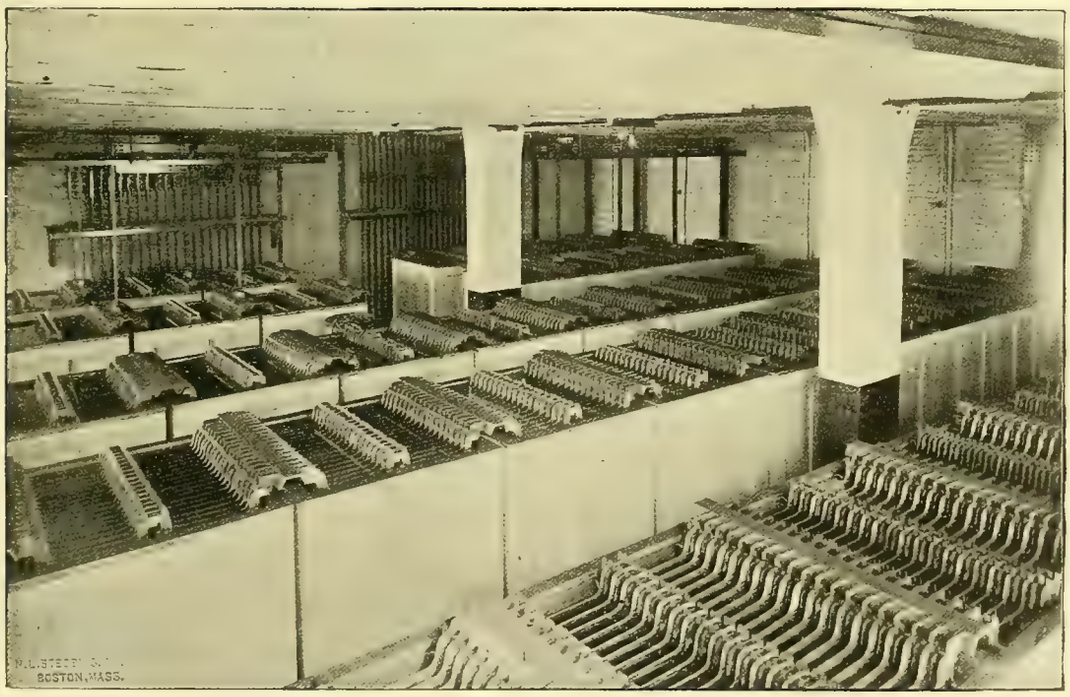
All patent rights for the exclusive manufacture of

**Tudor Storage Batteries**

in the United States, and is prepared to furnish Batteries of this type of any desired size.

**In Germany and Austria** the TUDOR BATTERY is used in eighty per cent. (80%) of all Central Stations—besides being installed in

**15 RAILWAY POWER PLANTS and 5000 ISOLATED LIGHTING PLANTS.**



TUDOR STORAGE BATTERIES—BOSTON EDISON STATION.

**Storage Batteries are Needed in Central Stations:**

**1st.** To effect reduction in first cost of plant. (Half steam power plant and half Storage Battery Plant costs only three-quarters of what all Steam Plant would cost for same work.)
**2d.** To convert variable into steady loads. This will save machinery from strain.
**3d.** To effect a saving of from 20 per cent. to 40 per cent. in coal bills.
**4th.** To insure reserve power in case of accident to generating machinery.

For particulars address,

# The Electric Storage Battery Company,

Sole Manufacturers of the "CHLORIDE ACCUMULATOR,"

**PHILADELPHIA, PENNSYLVANIA.**

# INCANDESCENT LAMPS.

WE MANUFACTURE THE "GLOBE." LIFE AND EFFICIENCY GUARANTEED.

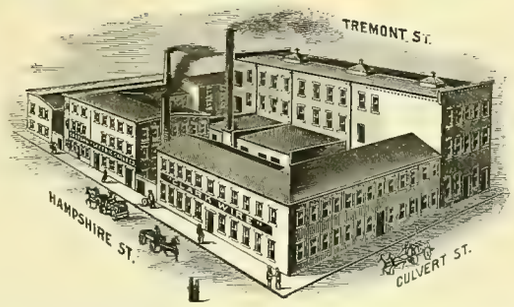
CHICAGO, ILLINOIS.

TRADE MARK.



In a Letter from the Inspector of the Boston Fire Underwriters' Union, he states: "A Thoroughly Reliable and Desirable Wire in every respect."

The Rubber used in insulating our Wires and Cables is especially chemically prepared, and will not deteriorate, oxidize or crack, and will remain flexible in extreme cold weather, and is not affected by heat.

We guarantee our Insulation wherever used, Aerial, Underground or Submarine, and our net prices are as low, if not lower, than any other first-class Insulated Wire.

We shall be pleased to mail Catalogues with Terms and Discounts for Quantities.

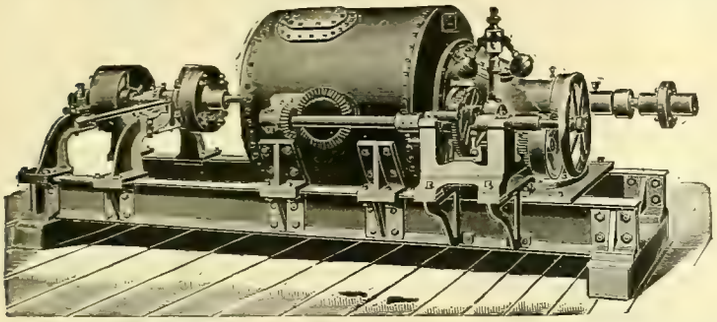
# VICTOR TURBINE WATER WHEEL.



Cylinder or Register Gate—Close Regulation and High Efficiency at Full and Partial Gate.

The attention of ELECTRIC COMPANIES is called to this **CELEBRATED WATER WHEEL** as particularly adapted to their use, on account of its **remarkably steady motion, high speed and great efficiency and large capacity** for its **diameter**, being **double** the **power** of most wheels of the same diameter. It is used by a number of the leading electric companies with great satisfaction. In the economical use of water it is without an equal, producing the highest per cent of useful effect **guaranteed.**

***SEND FOR CATALOGUE AND PARTICULARS.***

The accompanying engraving represents a single 10-inch Victor Turbine on horizontal shaft to develop 36 H. P. under 38 feet head. Arranged with 12-inch Worrell Friction Coupling at one end to disconnect pulley.

We are now prepared to furnish Victor Turbines, either single or in pairs, on horizontal shafts, and where the situation admits of their use we recommend them.

—TESTIMONIALS.—

We submit among hundreds of others the following testimonials, and call attention to the fact that they are from expert electricians, managers of exchanges and superintendents of railroad telegraph.

"A whisper is distintly heard. We pronounce the Standard perfect." STEELE CO. (N. D.) TEL. CO.

"We talked to Rowell, 75 miles, through storm induction. Have discarded the Bell for Standard." PECOS IRRIGATION & IMP. CO., Eddy, New Mexico.

"Have used Cushman, Harrison and Bell, but consider the Standard far superior." C. A. ROOD, Reedsburg, Wis.

"I should recommend Standard to our people, as against any other with which I am familiar. The test we gave was between St. Paul and Dickinson, 559 miles." O. C. GREENE, Supt. Telg. Northern Pacific Ry.

"Your instruments are working very nicely and every one exceedingly pleased with them. You will have all the business you can do." HOME TELEPHONE CO., Sioux City, Iowa.

"The Standard when known will knock out inferior instuments." U. J. FRY, Supt. Tel. C., M. & St. P. Ry.

"Better than any of the others we have." E. PENNINGTON, Supt. Tel. "Soo" Ry.

"Have given Standard extremely hard test where induction is heavy, with most satisfactory results. J. R. MICHAELS, Supt. Tel. St. Paul & Duluth Ry.

"The Standard will transmit a whisper or a shout with equal clearness." HUMPHREY JONES, Washington C. H., Ohio.

"Their efficiency and working is perfect. We shall use nothing but Standard." GALLAGHER BROS. Meridian, Miss.

Correspondence solicited regarding the application of Vertical Screw Belt Tightener, Improved Worrall Clutch System, High Grade Shafting, Pulleys and Hangers for the transmission of power.

# ELECTRICITY FOR ENGINEERS.

New Edition, Just Out! Now Published in One Complete Volume, 424 Pages, Profusely Illustrated.
Just the Work for Engineers, Electricians, Dynamo Tenders, etc.

**PART I. CONTENTS.**—CHAPTER I: Electricity; Positive and Negative; Conductors, Non-Conductors and Insulators; Electro-Motive Force; Volts; Resistance; Ohms; Current; Amperes.—CHAPTER II: Dynamos; Magnets; Field Coils; Electro Magnets; Permanent Magnets.—CHAPTER III: Armatures, Construction of, Different Kinds of; Commutators, How Made and Connected; Heating of Armatures; Eddy Currents.—CHAPTER IV: The Current; How Produced; Induction; Series Wound Dynamos; Shunt Wound Dynamos; Exciting the Fields; Constant Current and Constant Potential Dynamos; Series and Parallel; Parallel or Multiple Arc System.—CHAPTER V: Incandescent Lamps; Filaments; Connections; Flashing; Exhausting; Testing; Candle Power; Operated in Series; Automatic Cut-Out; In Multiple Arc or Parallel; Multiple Series; Multiple Series Cut-Out; Three Wire System.—CHAPTER VI: The Arc Light; How Formed; Causes of Unsteadiness; Remedy; Effect of Shades or Globes; Shape of Carbons under Different Conditions of Burning; Arc Lamps; Regulating and Cut-Out Mechanism; Action of Current; Clutch Lamps; Clockwork Lamps; Double Lamps; Troubles in Lamps.—CHAPTER VII: Commutators and Brushes; The Brush Commutators; Brushes; Different Styles of Brushes; Double Brushes; Single Brushes; Troubles with Commutators and Brushes; Correct Position of Brushes; Sparking at Brushes; Care of Brushes and Commutators; Flashing.—CHAPTER VIII: Current Regulation; Hand Regulation; By Position of Brushes; Resistance Box; Resistance Coils.—CHAPTER IX: American System of Automatic Current Regulation; The Dynamo; Regulator; Action of Regulator.—CHAPTER X: Brush System of Automatic Current Regulation; Brush Armature; Diagram of Circuits through Dynamo, Regulator and Lamps; Dial or Regulator; Care and Adjustment of Dial; Dial Controller; Circuits and Connections of No. 8 Brush Dynamo; Circuits of Compound Wound Constant Potential Brush Dynamo.—CHAPTER XI: The Edison System; Automatic Regulator; Circuits of Regulator; Circuits of Dynamo; Action of Regulator; Howell Pressure Indicator; Diagram of Circuits; Description of Parts and Operation.—CHAPTER XII: Excelsior System of Automatic Current Regulation; Dynamo; Armature; Diagram of Circuits; The Regulator and Motor; Action of Regulator.—CHAPTER XIII; Schuyler System of Automatic Current Regulation; Dynamo; Armature, Commutator and Brushes; Diagram of Circuits in Armature and Field; Regulator; Circuits in Regulator —CHAPTER XIV: Thomson-Houston System of Automatic Current Regulation; Dynamo; Armature; Commutator and Brushes; Controlling Magnet; Wall Controller; Diagram of Circuits; Air Blast.—CHAPTER XV: Waterhouse System of Three-Brush Automatic Current Regulation; Dynamo; Extra Brush; Resistance Coils and Regulator.—CHAPTER XVI: Ampere Meters; Tangential Scale; Solenoid Meters.—CHAPTER XVII: Voltmeters; Pressure and Potential Indicators.—CHAPTER XVIII: Testing; Galvanometers; Astatic Needle; Differential Apparatus.—CHAPTER XIX: Wheatstone Bridge or Electrical Balance; Diagram of Circuits and Methods of Use; Bridge and Rheostat; Round Form; Square Form.—CHAPTER XX: The Magneto as a Testing Instrument; Armature; Field; Bell; Diagram of Circuits.—CHAPTER XXI: Coupling Dynamos Together; In Series; In Shunt; Series, Shunt and Compound Wound Machines.—CHAPTER XXII: Switches and Switchboards; Loop Switch; Plug and Socket; Change Over Plug and Socket; Conclusion. CHAPTER XXIII: Electric Motors, General Principles the Same as in Dynamos; Types; Shunt and Series Motors Suitable for all General Purposes; Regulation of Shunt Motors; Of Series Motors; Counter E. M. F.; Direction of Rotation and Direction of Current; Starting Motors; Diagram of Connection.

**PART II. CONTENTS.**—CHAPTER I: Alternate Current Dynamos; Principles of the Field. Field Current Armature; Winding; Connections; Lamination; Different Types of Alternators; Regulation; Leading Systems; The Brush Generators; Magnets; Armature; Principles of Induction.—CHAPTER II: Dynamos, Continued; The Mordey Alternator; Stationary Armatures; Field Magnets; Ferranti Armature, Field Magnets; Winding; Collectors.—CHAPTER III: Dynamos, Concluded; Siemens Dynamo; Best Magnetic Circuits; Stanley Constant Current Dynamo; The Armature; Self Induction; Regulation —CHAPTER IV: Induction Coils; Converters; Transformers; Economy of Distribution; An Electrical H. P.; Losses in Conductor; Induction Coils; Effect of Induction; Transformers.—CHAPTER V; Transformers, Continued; Induction Coils; Converters; Transforming Up and Down; Design of Transformers; The Static Charge; Protection Against; Grounding the Secondary; Other Devices; The Foil Protector; Different Types of Transformers.—CHAPTER VI: Transformers, Concluded; Fuses; Regulation; Winding of Transformers; Connecting to Circuit; Regulation; Safety Fuses.—CHAPTER VII: Parallel System; Series Arc Light System; Diagram of Circuits; Parallel System; Primary Circuit; Secondary Circuit; Placing of Transformers; Fuses; Diagram of Series Arc Light Circuit —CHAPTER VIII: Lines of Force; Hysteresis; Magnetic Penetration; The Circuit of Lines of Force; Experiments with Magnet; Rapidity of Reversals and Hysteresis.—CHAPTER IX: Arc Lamps; In Series; The Westinghouse Arc Lamp; Diagram of Circuits in Lamp; Action of the Mechanism; Flat Carbons.—CHAPTER X: Arc Lamps, in Multiple; Slattery Differential Lamp; Mechanism of Lamp; Its Operation.—CHAPTER XI: Measuring and Indicating Apparatus; Instruments for Use with Alternating Currents Differ from those used with Continuous Currents; Ammeters; Voltmeters; Description of Several Forms of Instruments —CHAPTER XII: Measuring Instruments, Continued; Hot Wire Instruments; The Cardew Voltmeter; Details of the Instrument; Low Potential Voltmeter.—CHAPTER XIII: Voltmeters: Double Coil Voltmeter; Two Types.—CHAPTER XIV: Spring Meters; Curled Spring Meter.—CHAPTER XV: Twisted Strip Instruments; Diagram of Connections and Operation of Instrument.—CHAPTER XVI: Recording Meters; Stanley Meter; Construction and Principles of Operation; Diagrams of Parts; Slattery Induction Meter; Description of Parts and Principles of Operation; Watt Meter; Thomson Meter.—CHAPTER XVII: Generators in Parallel; Difficulties in Operating; Alternate Current Generators in Parallel; Arrangements of Circuits and Machines for Operating in Parallel; Diagram of Common Arrangement of Machines and Circuits.—CHAPTER XVIII: Ohm's Law; Strength of Current; Formulas and Examples; Power and Heating Effects of Currents.—CHAPTER XIX: Ground Alarms and Leak Detectors.

**PRICE, $2.50.**

# Just What You Are Looking For!

## A NEW AND VALUABLE BOOK.

# ELECTRIC LIGHTING PLANTS,

## THEIR COST AND OPERATION.

By W. J. BUCKLEY.

Data compiled from station reports of electric lighting plants employing overhead circuits, with suggestions pertaining to the information usually desired by the non-technical purchaser.

*With Numerous Illustrations, Diagrams, Plans, Tables, Etc. 275 Pages. Cloth. Price $2.00, Postage Free.*

This work gives all necessary data for the erection of an electric light plant of any size.

**THE COST OF ARC LIGHTING.** **THE COST OF INCANDESCENT LIGHTING.**

**READ THE TABLE OF CONTENTS:**

Alternating Arc Lamps, Arc Plants, Belting, Boilers, Boiler Settings, Boiler Efficiencies, Books, Building, Cost of Arc Dynamos and Lamps, Cost of Arc Plants Erected, Cost of Alternating Dynamos, Cost of Alternating Plants Erected, Cost of Belts, Cost of Boilers, Cost of Brick Chimneys, Cost of Copper for Alternating Circuit, Cost of Corliss Engines, Cost of Compound Corliss Engines, Cost of Compound High Speed Engines, Cost of Condensers, Cost of Friction Clutch Pulleys, Cost of Heaters, Cost of High Speed Engines, Cost of Incandescent Dynamos, Cost of Idlers, Cost of Injectors, Cost of Meters, Cost of Motors, Cost of Operating Lamps per hour, Cost of Power Generators, Cost of Poles, Cost of Plain Pulleys, Cost of Pillow Blocks, Cost of Pumps, Cost of Shafting, Cost of Shaft Couplings, Cost of Stacks—iron, Cost of Stacks—brick, Cost of Steam, Cost of Transformers, Cost of Wire, Chimneys, Circuit Loss, Contract Blanks, Current Distribution, Circuits—overhead, Circular Mils of Wire, Depreciation, Direct Connected Apparatus; Dynamos, Dynamo Data, Economy of Condensing, Economy of Covering Steam Pipes, Economy of Heater, Efficiency of Engines, Engines, Equivalent of Current in Horse Power, Equivalent Rates of Lighting, Fuel, Horse Power of Belting, Horse Power of Motors, Horse Power of Shafting, Incandescent Arc Lamps, Instruments, Instructions for Employes, Insulation, Labor, Load Chart, Meter Connections, Municipal Ownership, Natural Gas, N. E. L. A. Standard Rules, Oil, Outcome of Practical Management, Pole Line, Pulleys, Rope Transmission, Resistance of Wire, Rules—Fire Underwriters, Report Com. on Data N. E. L. A., Reports of Cities Owning Plant, Reports of Cities Contracting, Stock Room, Shafting, Transformers, Transformer Curves, Wiring Tables—Primary Wiring, Wiring Tables—Secondary Wiring, Wiring Tables, Motor Wiring, Wire, Wire Formula, Water Power, Wood as Fuel.

# Progress the Order of the Age.

## THE NEW AMERICAN LEADS.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Stockman, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

## CALIFORNIA EXCURSIONS.

**PERSONALLY CONDUCTED.**

Leave Chicago via the Burlington Route (C. B. & Q. R. R.) every Wednesday at 6.35 p. m. Route via Denver, Denver & Rio Grande Ry. (the scenic line) and Salt Lake City. These excursions are accompanied by an experienced agent, of the Burlington Route, thoroughly familiar with California. The latest model of Pullman tourist sleeping cars are used. They are fitted with every comfort; carpets, upholstered seats, mattresses, pillows, bed linen, toilet rooms, etc. They lack onlysome of the expensive finish of the Pullmans run on the limited express trains, while the cost per berth is only about one-third. Ask your nearest ticket agent for particulars and descriptive folders, or write to T. A Grady, Manager Burlington Route Excursion Bureau, 211 Clark Street Chicago, Ill.

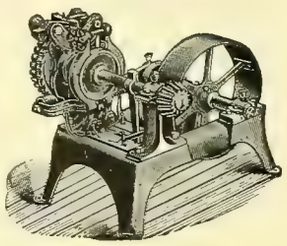
---

## Going to California.

The Burlington Route is the only railway running "Personally Conducted" Excursions via Denver to Colorado Springs, Salt Lake, Ogden, Sacramento, San Francisco, Stockton, Merced, Fresno, Bakersfield, and Los Angeles at the lowest rates and withont change of cars.

Leave Chicago every Wednesday. Write or call on T. A. Grady, Excursion Manager, 211 Clark Street, Chicago

---



# WATER POWER.

## GOVERNED FOR ELECTRICAL WORK.

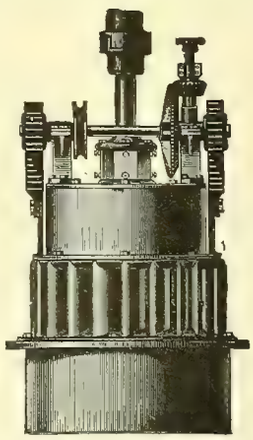
The limit of government of water-power is often determined by the design and construction of plant. Consult us if possible before completing your plans.

With **REPLOGLE'S COMPOUND REGULATORS** we are prepared to undertake and **guarantee** the government of water-power for all purposes, including **Electric Railway, Power and Lighting Plants.** We make and sell all of Replogle's Electrical and Mechanical Governors and other devices for the government of water-power. Expert advice furnished on application. If results of your present system are not satisfactory, write us. Address all inquiries to

**THE REPLOGLE GOVERNOR WORKS,**

MARK A. REPLOGLE, Chief Engineer. **AKRON, OHIO.**

---



# THE McCORMICK TURBINE,

**On Vertical or Horizontal Shaft, Especially Adapted for Electric Work.**

**Gives more power as to diameter with a higher percentage of useful effect than any other water-wheel heretofore made.** All sizes, right and left hand, are built from patterns perfected under systematic tests in the Holyoke Testing Flume.

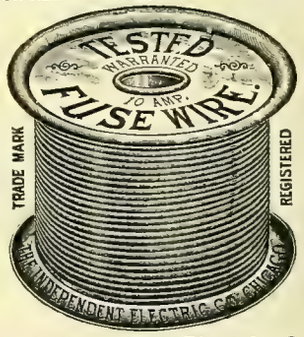
Parties having power plants which are unsatisfactory, and those contemplating the improvement of powers, will find it to their interest to confer with me, **as I am willing to guarantee results where others have failed, no matter what make of turbine has been in use. STATE REQUIREMENTS AND SEND FOR CATALOGUE.**

**S. MORGAN SMITH, York, Pa.**

**Estimates furnished for complete power plants and results guaranteed.**

---

**FUSE WIRE AND LINKS FOR ALL SYSTEMS.** } Correct Carrying Capacity. Absolutely Uniform.



WRITE US. TRADE MARK REGISTERED ALL SIZES IN STOCK.

**The Independent Electric Co.,**

**39th St and Stewart Ave., Chicago.**

OKONITE

TRADE MARK.

INSULATED WIRES AND CABLES.

For Aerial, Submarine and Underground Use.

Candee Aerial Wires.

Manson Protecting Tape.

Okonite Waterproof Tape.

BRANCHES: Chicago, Boston, Philadelphia, Pittsburgh, Minneapolis, Cincinnati, Kansas City, Omaha, Louisville, St. Louis, San Francisco, London and So. America.

IMPORTED

**Carbons**

FOR ARC LIGHTS.

EQUAL TO THE BEST.

Kept in Stock.

Ed. Wertheim, 55 S. Canal St., CHICAGO.

**SOLAR CARBON AND MANUFACTURING CO.,**

MANUFACTUREBS OF

Carbon Brushes, Battery Carbons,

Solid Electric Light Carbons,

For any System, of any degree of hardness.

Soft Cored Carbons (NOT HOLLOW),

For Arc Lamps on Incandescent and Railway Circuits

SOLAR CARBON AND MANUFACTURING CO.,

95 FIFTH AVENUE, PITTSBURG, PA.

**Best Boilers.**

Our Boiler Shop is equipped for making large boilers in two sheets as shown in the cut. No seams in fire, no laps to catch scale and mud; bottoms smooth and easily cleaned.

WRITE FOR PRICES.

The Murray Iron Works Co., BURLINGTON, IA.

**COLUMBIA**

COLUMBIA INCANDESCENT LAMP CO.,

1910-1914 Olive Street, ST. LOUIS.

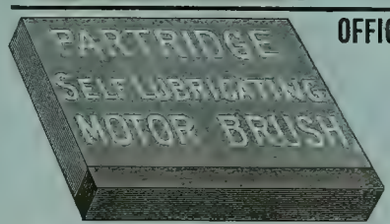
**ALFRED F. MOORE,**

MANUFACTURER OF

**INSULATED ELECTRIC WIRE,**

FLEXIBLE CORDS and CABLES.

200 and 202 North Third Street. - - PHILADELPHIA, PA.



OFFICE AND FACTORY, SANDUSKY, O.

—( AGENTS: )—

C. J. Mayer, Betz Bldg., Philadelphia, Pa.
Smith & Wallace, Hamilton St, Boston, Mass.
Ed. P. Sharp, 44 Niagara St., Buffalo, N. Y.
Arthur S. Partridge, Bank of Commerce Bldg., St. Louis, Mo.
Standard Ry. Supply Co., Monadnock Bldg., Chicago, Ill.
Reger & Atwater, 214 Pine St, San Francisco, California.
Central Electric Co., 173 Adams St., Chicago.
Harry M. Shaw, 126 Liberty St., New York.

**DRY BATTERIES.**

BEST OF ALL IS **THE STANDARD,**

Made by J. H BUNNELL & CO., 76 Cortlandt St., New York.

Best Construction and Ingredients. Strongest, most Durable and Reliable. Size 6x2½, 60 cts per cell.

LIBERAL DISCOUNTS.

**WESTON Electrical Instrument Co.,**

114-120 William St., NEWARK, N. J., U. S. A.

Weston "Round Pattern" Voltmeter, Style F.

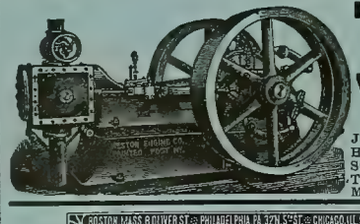
We desire to call attention to a line of **cheap** but excellent Switchboard Instruments for Direct Current Circuits, which we designate as

**"Round Pattern," Style F.**

These Instruments are particularly suitable for Isolated Plants and Feeder Circuits in Railway and Power Plants. Voltmeters in ranges from 3 to 750 volts. Ammeters in ranges from 1 to 2,500 amp. All Weston Instruments are unsurpassed in excellence of workmanship, in accuracy and economy of operation.

Mention the WESTERN ELECTRICIAN when writing for catalogues.

**WESTON ENGINES.**



High Pressure Boilers.

Complete Power Plants.

Estimates and Drawings Submitted.

WESTON ENGINE CO., PAINTED POST, N. Y.

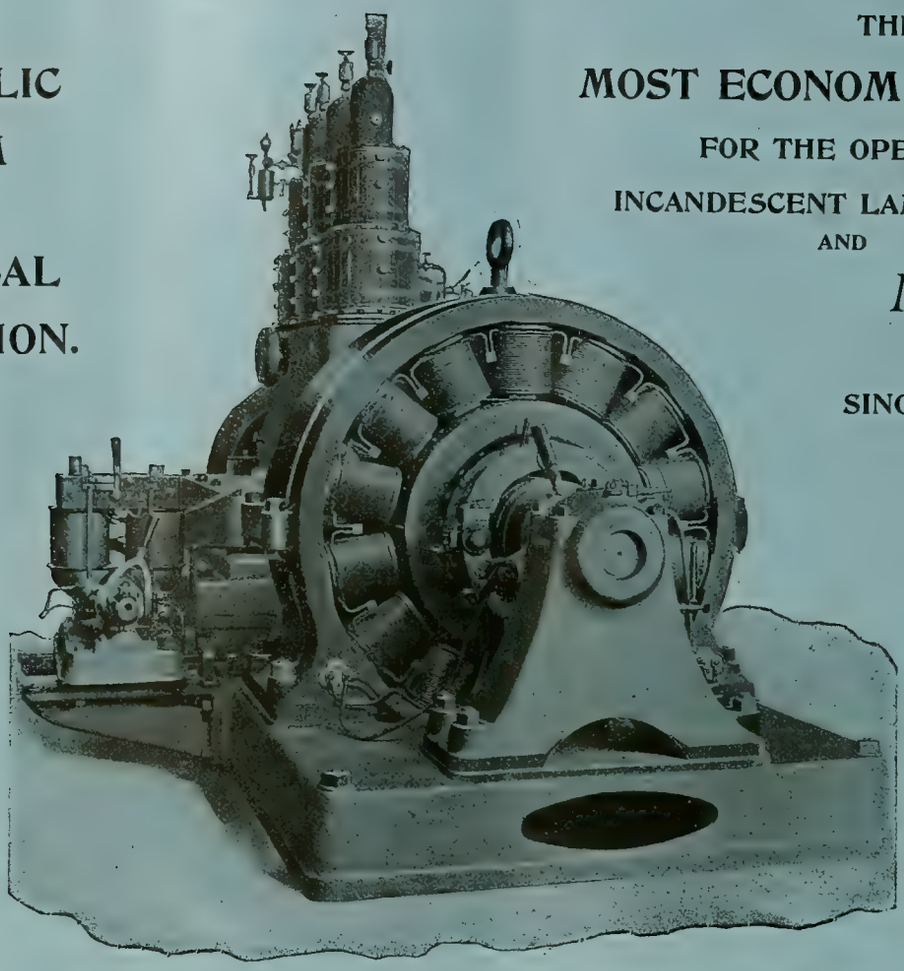
# General Electric Company.

THE
MONOCYCLIC
SYSTEM
OF
ELECTRICAL
DISTRIBUTION.



THE
MOST ECONOMICAL SYSTEM
FOR THE OPERATION OF
INCANDESCENT LAMPS, ARC LAMPS
AND
MOTORS
FROM A
SINGLE
ALTERNATING
GENERATOR.

MONOCYCLIC GENERATOR DIRECT-CONNECTED TO BULLOCK ENGINE.

**THE GENERATORS** are simple, practical and efficient. They are SELF-REGULATING. They will carry **Lights** and **Motors in any proportion** up to their full capacity.

**THE MOTORS** are EFFICIENT, SELF-STARTING and EASY to OPERATE. They have no commutators, collector rings or brushes. No condensers.

**GOOD REGULATION. NO UNBALANCING.**

**The Monocyclic System is the Solution of the Day Load Question.**

**MAIN OFFICE: SCHENECTADY, N. Y.**

**SALES OFFICES:**

Boston, Mass., 180 Summer Street.
New York, N. Y., 44 Broad Street.
Syracuse N. Y., Sedgwick, Andrews & Kennedy Bldg.
Buffalo, N. Y., Erie County Savings Bank Building.
Philadelphia, Pa., 509 Arch Street.

# CHICAGO EDISON CO.,

139 ADAMS ST., CHICAGO, ILL

DEALERS IN Electric Lighting **SUPPLIES,** Incandescent Lamps OF ALL CANDLE POWERS.

**NATIONAL CARBONS AND BRUSHES,**
**HARDTMUTH CORED AND SOLID CARBONS,**
**KNIFE SWITCHES, FROM 10 TO 1,000 AMPERES,** IN **STOCK.**
**CUT-OUTS, SOCKETS, ARC LAMPS AND GLOBES,**
**RUBBER COVERED WIRES, NORWICH CABLES, Etc.**

## ARC LAMPS!!

**For Incandescent Circuits. For Direct Current.**
**For Alternating Current. For Railway Circuits.**
**Focusing, Twin and Series Lamps.**
**All new lamps, all in perfect order and ready for use.**

## CARBONS!!

**High Class Foreign and Domestic.**
**Cored Carbons, Tested Carbons.**
**Siemens & Halske, Lacombe, Hardtmuth, Ship Cored, National, Fidelity, Solar and Globe Carbons.**
**These Standard Goods MUST BE SOLD to close an Estate. Write for particulars to**

**CHAS. H. WATERMAN,**
1305 Havemeyer Building,
26 Cortlandt Street, NEW YORK.

Sales Agent for { Wm. J. Hammer, John F. Randolph, } Assignees for Francis R. Upton.

## Gordon Primary Battery

EXCELS IN

Long Life, Efficiency,
Economy, Adaptability.
It is Absolutely Non Freezing,
Labor Saving,
Free from Local Action,
Freedom from Gases and Odors.
Superior Generation of Energy.

## THE "STAR" ARC LAMPS FOR ALL CURRENTS.

### DIRECT CURRENT LAMPS

(LOW-TENSION).

Stationary Arc.

Will not see-saw.
Never take more current than they are built for.
Short circuiting absolutely impossible.
Start always with proper size Arc.

Arc Lamps for Power and Railway Circuits.

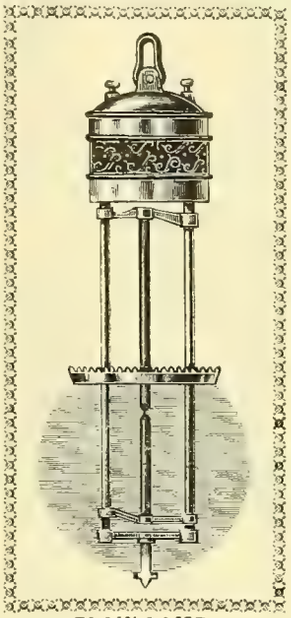
Variations in the Voltage have **no effect** on the proper working of our Lamps.

The **feeding mechanism** in all our Lamps is **superior** to any other.

Our 14 Hour Lamp is only 33 inches long, over all.

We make our Lamps in plain and ornamental styles.

No extra Hood required with our Outside Lamps.



PLAIN LAMP.

### DIRECT CURRENT LAMPS

(HIGH-TENSION.)

Stationary Arc.

Perfect Insulation. Steady Light.
Our cut-out (expressly designed for these Lamps) prevents overheating of Shunt Spool.
Our High-Tension Lamp is **the best** for interior lighting, on account of its shortness and neat design.

Arc Lamps for Alternating Current.

**Start without jumping.**
Keep always proper size Arc.
Light perfectly steady.
**No sticking possible.**
Practically noiseless.
We **guarantee** it to be **the best** Alternating Lamp ever put on the market.

**To substantiate all above claims, we will send our Lamps ON TRIAL to responsible parties. Other particulars and prices on application.**

## Auerbach=Woolverton Electric Company,

*Offices and Works, 113 and 115 Adams Street, = = HOBOKEN, N. J.*

THE ONLY

# Reflector Plate Alternating Arc Lamp.

**The Helios Electric Company claims:**

That they have more alternating arc lamps in use than all other makes combined

They guarantee 80 per cent. more available light than is obtained from any other alternating arc lamp.

They guarantee to give as much light as any direct current lamp using the same number of watts.

## Spencer's Improved Alternating Arc Lamp

**Possesses the following advantages:**

Minimum choke in the regulating coil.
Practically no energy absorbed in the regulating device.
Durability of all its parts; not liable to get out of order.
Can be used successfully on all periods.
Starts quickly.

## Spencer's Direct Current Constant Potential Lamp.

**Guaranteed not to see-saw.**

## FOR SALE, CHEAP! NEW 50 LIGHT Arc Dynamo.

This machine has never been used. In fact, has not yet been taken out of shop. Is of leading manufacture and will be guaranteed direct to purchaser by makers. Will be sold for one hundred dollars under market for cash.

Address **DYNAMO,**
WESTERN ELECTRICIAN OFFICE.

## DOMESTIC ELECTRICAL WORK.

Concise and Practical Explanations for Plumbers, Tinners and Hardware Dealers on How to Wire Buildings for Bells, Alarms, Anunciators, and for Gas Lighting from Batteries.

*Illustrated with Twenty-two Diagrams.*

By WILLIAM A. WITTBECKER.

**Price in Paper, 25 Cents.**
**Price in Cloth, 50 Cents.**

THE growing demand for simple electrical apparatus in dwelling houses, offices and workshops, and the need of plain instructions whereby any person without a previous knowledge of electricity may be enabled to undertake their successful installation, has prompted the publication of this little book. It is not intended for the amateur who seeks for nothing but experimental work, neither is it expected to enlighten the expert electrician; but to the person who is seeking for information that will assist him in increasing his daily earnings this little volume is addressed.

The information given is above all else practical, and with a close observance of the directions laid down anyone without the slightest knowledge of electricity should be able to do the work described.

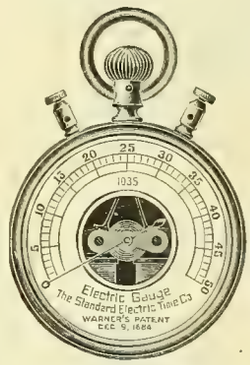
## THE ELECTRIC GAUGE.



For Testing Batteries and the Strength of Battery Currents.

The only convenient and practical instrument for the purpose. It is indispensable to those using batteries and having the care of them. The Pocket Gauge is the size of an ordinary watch, and is very convenient for the use of linemen, inspectors, etc. Price, $8.00. Call for WARNER'S PATENT ELECTRIC GAUGE. Manufactured only by

The Standard Electric Time Co., Waterbury, Conn.

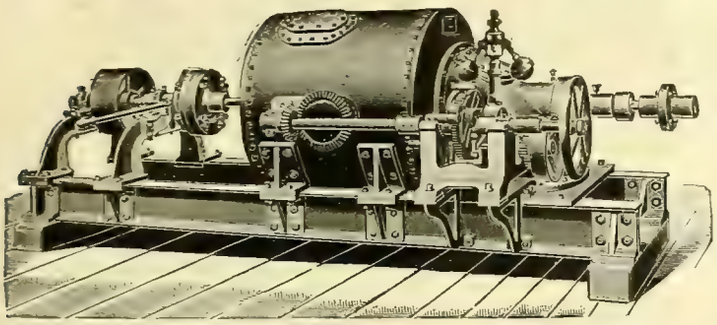
# VICTOR TURBINE WATER WHEEL.



Cylinder or Register Gate—Close Regulation and High Efficiency at Full and Partial Gate.

The attention of ELECTRIC COMPANIES is called to this **CELEBRATED WATER WHEEL** as particularly adapted to their use, on account of its **remarkably steady motion, high speed and great efficiency and large capacity** for its **diameter,** being **double** the **power** of most wheels of the same diameter. It is used by a number of the leading electric companies with great satisfaction. In the economical use of water it is without an equal, producing the highest per cent of useful effect **guaranteed.**

***SEND FOR CATALOGUE AND PARTICULARS.***

The accompanying engraving represents a single 10-inch Victor Turbine on horizontal shaft to develop 36 H. P. under 38 feet head. Arranged with 12-inch Worrell Friction Coupling at one end to disconnect pulley.

We are now prepared to furnish Victor Turbines, either single or in pairs, on horizontal shafts, and where the situation admits of their use we recommend them.

# KNOWLEDGE IS POWER.

Everyone engaged in the electrical business should keep posted on the developments in the art by reading the latest books on the subject. We are headquarters in the West for electrical books and can fill orders for any work published, promptly on receipt of price. We call your special attention to the following standard books:

**Badt, Lieut. F. B.**—New Dynamo Tenders' Hand Book. This is, as the name indicates, a **New Book**, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 226 pages, 140 illustrations, flexible cloth binding, size of type page 5½x3 inches . . . . . $1.00

——Incandescent Wiring Hand-book. A timely book containing full illustrations for incandescent wiring and complete information concerning methods of running wires, location of safety devices, splices, insulation, testing for faults, wire gauges, general electrical data calculating sizes of wires, wiring fixtures, elevators, buildings, isolated and central station plants. The only book of the kind published. Type page 5½x3 inches, flexible cloth binding 66 pages, 35 cuts and 5 tables, 3 of which are 12x18 inches . . . . . $1.00

——Bell Hangers' Hand-book. Just the book for people engaged in selling, installing or handling electric batteries, electric bells, elevators, house or hotel annunciators, burglar or fire alarms, electric gas lighting apparatus, electric heat apparatus. 106 pages, 97 illustrations, flexible cloth binding. Type page 5½x3 inches. . . . . $1.00

——Electric Transmission Hand-book. First edition, three thousand copies. 97 pages, 22 illustrations, 27 original tables . . . . . $1.00

Gives more *Practical* information on the subject than any work published to date. The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers and Motor Inspectors. With this book anybody may make estimates on the cost of Transmission Plants.

**Ayrton, W. E.**—Practical Electricity; a Laboratory and Lecture Course for First year Students of Electrical Engineering, based on the Practical Definitions of the Electrical Units. With numerous illustrations. Sixth edition . . . . . $2.50

**Atkinson, Philip.** The Elements of Electric Lighting. Seventh edition, fully revised, and new matter added. 104 illustrations. 260 pages . . . . . $1.50

——The Elements of Dynamic Electricity and Magnetism. 405 pages and 117 illustrations. Second edition . . . . $2.00

**Angell, J.**—Elements of Magnetism and Electricity, with Practical Instructions for the Performance of Experiments, and the construction of cheap apparatus. One hundredth thousand 160 illustrations . . . . $1.00

**Allsop, F. C.**—Electrical Bell Construction; Treatise on the Construction of Electric Bells, Indicators, and similar apparatus. 177 illustrations . . . . . $1.25

**Buckley, W. J.** Electric Lighting Plants, their cost and operation. 275 pages, many illustrations and diagrams. Cloth . . . . . $2.00
Paper . . . . . 1.00

**Bedell, Fred'k and Albert C. Crehore.** Alternating Currents; An Analytical and Graphical Treatment for Students and Engineers. Second edition. 112 illustrations . . . . . $2.50

**Blakesley, T. H.**—Papers on Alternating Currents of Electricity for the use of Students and Engineers. Third edition, enlarged. 12mo, cloth . . . . . $1.50

**Bonney, G. E.**—Electro-Plater's Hand Book. A Manual for Amateurs and Young Students on Electro-Metallurgy. 60 illustrations. 208 pages 12mo cloth . . . . $1.25

**Webb, H. L.**—A practical Guide to the Testing of Insulated Wires and Cables Illustrated . . . . . $1.00

**Webb, Herbert Laws.**—Telephone Hand-book. Illustrated. 12mo. cloth. Chicago, 1894 . . . . . $1.00
The only complete work on the Telephone. All possible information for any one interested in Telephones and how to make and operate them.

**Bottone, S. R.**—Electrical Instrument Making for Amateurs. A Practical Hand-book, with 48 illustrations. Fourth edition. Enlarged by a chapter on the Telephone . . . $0.50

—— The Dynamo, How Made and How Used. A Book for Amateurs. Eighth edition, with additional matter and 39 illustrations . . . . . $1.00

—— Electro-Motors. How Made and How Used. A Handbook for Amateurs and Practical Men. Reduced to $0.50

—— How to Manage the Dynamo. A Hand-book for Ship Engineers, Electric Light Engineers and Electro-Platers. . . . . $0.60

**Crosby, O. T., and Dr. Louis Bell.**—The Electric Railway in Theory and Practice. A Complete Treatise on the Construction and Operation of Electric Railways. Second edition, revised and enlarged. 183 illustrations . . . . . $2.50

**Cox, Frank P.**—Continuous Current Dynamos and Motors. An Elementary Treatise for Students and Engineers. Illustrated . . . . . $2.00

**Crocker, F. B., and Wheeler, S. S.**—The Practical Management of Dynamos and Motors. With a special chapter by H. A. Foster. Illustrated. Second edition, revised and enlarged . . . . . $1.00

**Dyer, A.**—Induction Coils. How Made and How Used. Third edition. Boards . . . . . $0.50

**Desmond, Chas.**—Electricity for Engineers. Part I. Constant Current A clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps Indicator and Measuring Instruments; also a full explanation of the electrical terms used in the work. Part II. Alternate Current Apparatus. Containing an explanation of the principles governing the generation of, and a description of the instruments and machinery used in connection with Alternate Electric Currents. Illustrated. Revised edition . . . . . $2.50

**Gore, G.**—The Art of Electro-Metallurgy, including all Known Processes of Electro Deposition. Fourth edition . . . $2.00

**Grier, Thos. G.**—Wiring for Motor Circuits. A handy little pamphlet containing tables for wiring and for motor service, arranged in convenient form for ready reference. $1.00

**Lockwood, T. D.**—Electricity, Magnetism and Electric Telegraphy A Practical Guide and Handbook of General Information for Electrical Students, Operators and Inspectors. 376 pages, 152 Illustrations . . . . . $2.50

——Electrical Measurement and the Galvanometer; its Construction and Use. Second edition . . . . . $1.50

——Practical Information for Telephonists. 12mo, cloth. N. Y. . . . . $1.00

**McClure, J. B.**—Edison and his Inventions, with Full Explanations of the Telephone, Phonograph, Tasemeter, Electric Light and all his Principal Discoveries, etc. . $1.00

**Martin, T. C.**—Inventions, Researches and Writings of Nikola Tesla. With special reference to his work in polyphase currents and high potential lighting. 500 pp. 300 Illustrations, second edition . . . . . $4.00

——**and Wetzler, J.**—The Electric Motor and its Applications. Third edition. With an Appendix on the Development of the Electric Motor since 1888. By Dr. L. Bell. 300 Illustrations . . . . . $3.00

**Meadowcroft, W. H.**—The A. B. C. of Electricity. 36 Illustrations . . . . . $0.50

**Maver, and Davis, M. M.**—The Quadruplex. With Chapters on the Dynamo-Electric Machine in Relation to the Quadruplex. The Practical Working of the Duplex Telegraph Repeaters and the Wheatstone Automatic Telegraph. 63 illustrations . . . . . $1.50

**Noll, Augustus.**—How to Wire Buildings. A manual of the art of interior wiring. Illustrated . . . . . $1.50

**Niaudet, Alfred.**—Elementary Treatise on Electric Batteries. Translated from the French by L. M. Fishback. Illustrated . . . . . $3.50

**Niblet, J. T.**—Secondary Batteries, being a Description of the Modern Apparatus for the Storage of Electrical Energy. 75 illustrations . . . . . $1.50

**Prindle, H. B** A Popular Treatise on the Electric Railway of to-day. Fully illustrated . . . . . $0.25

**Pope, Franklin Leonard.**—Modern Practice of the Electric Telegraph. A technical Hand-book for Electricians, Managers and Operators. 185 illustrations. 14th edition, rewritten and enlarged . . . . . $1.50

**Russell, Stuart A.**—Electric Light Cables and Distribution of Electricity. 107 illustrations . . . . . $2.25

**Salomons, Sir David.**—Electric Light Installations. Vol. 1. The Management of Accumulators. A Practical Hand-book. 7th edition, revised and enlarged. With illustrations. 12 mo, cl. London, 1893 . . . . . $1.50

**Sloane, T. O'Conner.**—Electricity Simplified. The Practice and Theory of Electricity, including a Popular Review of the Theory of Electricity, with Analogies and Examples of its Practical Application in every-day life. Illustrated . . . . . $1.00

——Electric Toy Making for Amateurs, including Batteries, Magnets, Motors, Miscellaneous Toys . . . . . $1.00

——The Arithmetic of Electricity. A Manual of Electrical Calculations by Arithmetical Methods including numerous rules, examples and tables in the field of practical electrical engineering and experimenting. Third edition, revised . . . . . $1.00

——The Standard Electrical Dictionary. A Popular Dictionary of Words and Terms used in the practice of Electrical Engineering, 350 illustrations . . . . . $3.00

**Gordon.**—School Electricity. Sources, Currents, Measurement, Telegraphy, Telephony, Lightning, Electrolysis, Induction, etc. 262 pages, with 140 illustrations . . . . . $2.00

**Hopkinson, Dr. John.**—Dynamic Electricity; Its Modern Use and Measurement, chiefly in its Application to Electric Lighting and Telegraphy . . . . . $0.50

**Hospitalier, E.**—Domestic Electricity for Amateurs. Translated from the French. With additions by C. J. Wharton. With illustrations . . . . . $2.50

**Hawkins, C. C. and F. Wallis.**—The Dynamo, its Theory, Design and Manufacture. 190 illustrations . . . . . $3.00

**Haskins, C. H.**—The Galvanometer and its Uses. A Manual for Electricians and Students. Fourth edition, revised . . $1.50

**Hopkins, Geo. M.** — Experimental Science. Elementary, Practical and Experimental Physics, 650 Illustrations. $4.00

**Houston, Prof. E. J.**—A Dictionary of Electrical Words, Terms and Phrases. Third edition, re-written and greatly enlarged. Large 8vo. 562 pages, and 570 illustrations . . . . . $5.00

**Hopkinson.**—Original Papers on Dynamo Machinery and Allied Subjects. Illustrated . . . . . $1.00

**Haskins.**—Transformers. Their Theory, Construction and Application Simplified. 38 illustrations . . . . . $1.25

**Hering.**—Practical Directions for Winding Magnets and Dynamos. 12mo. cloth, reprint without additions . . . . $1.25

**Fleming, J. A.**—Short Lectures to Electrical Artisans. A course of Experimental Lectures delivered to a Practical Audience. Fourth edition. 74 illustrations . . . . . $1.50

——The Alternate Current Transformer in Theory and Practice. Vol. I. The Induction of Electric Currents, 500 pages, fully illustrated and with copious index. Second edition . . . . . $3.00

Synopsis of contents; Chapter 1. Introductory. 2. Electro-Magnetic Induction. 3. The Theory of Simple Periodic Currents. 4. Mutual and Self Induction. 5. Dynamical Theory of Current induction.
Vol. II. The Utilization of Induced Currents. 8vo. cloth. London, 1892 . . . . . $5.00

**Kempe, H. R.**—A Handbook of Electrical Testing. Fifth edition. 200 illustrations. 8vo. cloth. London, 1892 . . . . $7.25
In this edition there is a considerable amount of new matter; the old matter has been thoroughly revised.

——The Electrical Engineer's Pocket Book. Modern Rules Formulæ, Tables and Data. 32mo, leather . . . . . $1.75

**Kapp, Gisbert.**—Electric Transmission of Energy and its Transformation, Subdivison and Distribution. A practical handbook. Third edition . . . . . $3.00

——Alternate Current Machinery Illustrated . . . . . $0.50
[Vol. 96 Van Nostrand's Science Series.]

——Alternating Currents of Electricity. Their Generation, Measurement, Distribution and Application. Authorized American ed. With an introduction by William Stanley, Jr. Illustrated . . . . . $1.00

——Dynamos, Alternators and Transformers. 138 illustrations . . . . . $4.00

**Tesla, Nikola.**—Experiments with Alternate Currents of High Potential and High Frequency. A lecture delivered before the Institution of Electrical Engineers, London. With a portrait and biographical sketch of the Author Illustrated . . . . . $1.00

——Lectures on the Electro-Magnet. Illustrated . . . . . $1.00

**Thurston, Prof. R. H.**—Stationary Steam Engines, especially adapted to Electric Lighting Purposes. Treating of the development of Steam Engines, the Principles of Construction and Economy, with description of Moderate and High Speed Engines. With many folding plates . . . . . $1.50

**Thomson, Prof. Elihu.**—What is Electricity? Illustrated. $0.25

**Thompson, Sylvanus P.**—Dynamo-Electric Machinery. A Series of Lectures, with an introduction by Franklin L. Pope. 16mo. Numerous illustrations, fancy boards (Van Nostrand's Science Series, No. 66) . . . . . $0.50

——Polyphase Electric Currents and Alternate-Current Motors. Mailed to any address in the world on receipt of . . . . . $3.50

——Recent Progress in Dynamo-Electric Machines, being a Supplement to Dynamo-Electric Machinery. 16mo. (Van Nostrand's Science Series, No. 75) . . . . . $0.50

——Dynamo-Electric Machinery. Fourth edition, revised and rewritten. Numerous illustrations and 29 plates. 1,000 pages . . . . . $6.00

**Trevert.**—How to Make Electric Batteries at Home. Illustrated . . . . . $0.25

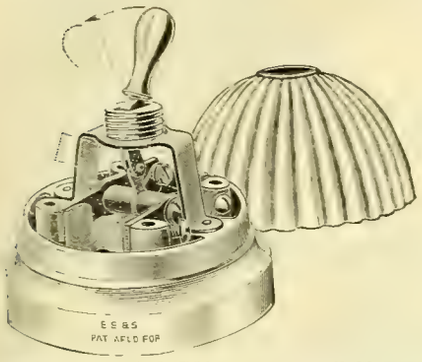
**Urquhart.**—Electro-Plating. A Practical Hand-book on the Deposition of Copper, Silver, Nickel, Gold, Aluminum, Brass, Platinum, etc. Second edition; carefully revised, with additions . . . . . $2.00

**Walker, F.**—Practical Dynamo Building, for Amateurs. How to wind for any output. With numerous illustrations. 16mo, boards. (Van Nostrand's Science Series, No. 98). $0.50

# ELECTRICIAN PUBLISHING CO.,

6 LAKESIDE BUILDING, CHICAGO.

# E. E. & S. CANOPY SWITCH.



This Switch is in all respects **A KNIFE SWITCH** placed **UNDER** a **COVER.** The break is quick and positive, entirely out of the control of the hand. Contacts and blades are made of pure copper. Easily wired and well proportioned.

Send us your orders and they will be promptly filled.

We Guarantee Protection to All Customers

**TESTIMONIALS.**

We submit among hundreds of others the following testimonials, and call attention to the fact that they are from expert electricians, managers of exchanges and superintendents of railroad telegraph.

"A whisper is distintly heard. We pronounce the Standard perfect." STEELE CO. (N. D.) TEL. CO.

"We talked to Rowell, 75 miles, through storm induction. Have discarded the Bell for Standard." PECOS IRRIGATION & IMP. CO., Eddy, New Mexico.

"Have used Cushman, Harrison and Bell, but consider the Standard far superior." C. A. ROOD, Reedsburg, Wis.

"I should recommend Standard to our people, as against any other with which I am familiar. The test we gave was between St. Paul and Dickinson, 559 miles." O. C. GREENE, Supt. Telg. Northern Pacific Ry.

"Your instruments are working very nicely and every one exceedingly pleased with them. You will have all the business you can do." HOME TELEPHONE CO., Sioux City, Iowa.

"The Standard when known will knock out inferior instuments." U. J. FRY, Supt. Tel. C., M. & St. P. Ry.

"Better than any of the others we have." E. PENNINGTON, Supt. Tel. "Soo" Ry.

"Have given Standard extremely hard test where induction is heavy, with most satisfactory results. J. R. MICHAELS, Supt. Tel. St. Paul & Duluth Ry.

"The Standard will transmit a whisper or a shout with equal clearness." HUMPHREY JONES, Washington C. H., Ohio.

"Their efficiency and working is perfect. We shall use nothing but Standard." GALLAGHER BROS. Meridian, Miss.

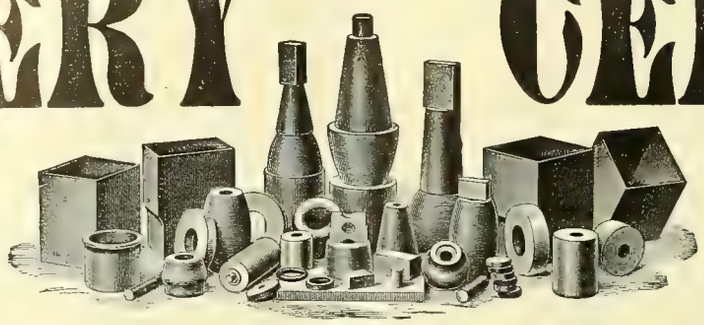
**CORRESPONDENCE SOLICITED.**

Address, **STANDARD TELEPHONE & ELECTRIC CO.,** Madison, Wisconsin.

P. L. SPOONER, President. H. A. TAYLOR, Treasurer. E. W. BATCHELDER, Secretary.

# THE FREEMAN

# BATTERY CELLS.



Estimates Furnished on Application. Prompt Delivery.

Standard Sizes Always on Hand.

The composition used in the manufacture of these battery cells makes them positively acid-proof, which result has never before been accomplished, providing additional strength to such an extent that this cell can be used where no other would be practical.

## THESE CELLS ARE A NEW PRODUCTION AND FULLY GUARANTEED.

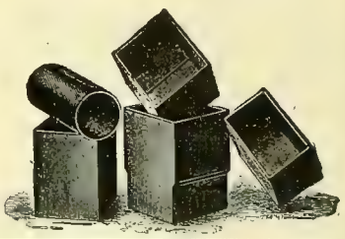
**For Prompt Reply Address**

J. Frank Dunbar, Treasurer, **NEWTON RUBBER CO.,**

87 Summer St., Boston Mass.



# The S. K. C. Two Phase Alternating Current System.

THE FIRST AND ONLY COMPLETE AND PERFECTED SYSTEM BY WHICH LIGHT AND POWER CAN BE SUPPLIED FROM THE SAME GENERATOR AND CIRCUITS. POWER TRANSMISSION AND DISTRIBUTION MADE PRACTICAL AND COMMERCIALLY SUCCESSFUL.

## POINTS OF SUPERIORITY:

Our system is much more simple and consequently more durable than any other, either direct or alternating.

Our generator is much more efficient than any other alternator, requires less attention and absolutely no supplies except lubricant for bearings.

It is practically self-regulating without the loss of energy involved by compounding or compensating. Other multiphase machines require a balance of load.

We have entirely eliminated from our generators the usual sources of trouble, expense and interruption of service: i. e., the revolving armature, commutator, collector rings, brushes, etc.

They can be built for any voltage from 110 for isolated lighting to the high voltages required for power transmission work; in latter case doing away with the expense and loss of step-up transformers; the usual central station machine can be connected at will for either 1,000 or 2,000 volts.

The motors excel in simplicity of construction; in starting torque and simplicity of starting device; in efficiency in the manner in which they take current in proportion to their load, and in uniformity of speed under different conditions of load.

Our transformers insure satisfactory service and the greatest economy. We are prepared to fill all orders promptly, and carry a full stock of transformers in Chicago.

**Patents**—Our apparatus is novel, different from anything heretofore made, and covered by patents that fully protect us and our customers. We are not infringing patents belonging to others, and shall avail ourselves of the patents under which we operate to protect ourselves from piracy by other manufacturers.

Just the Work for Engineers, Electricians, Dynamo Tenders, etc.

**PART I. CONTENTS.**—CHAPTER I: Electricity; Positive and Negative; Conductors, Non-Conductors and Insulators; Electro-Motive Force; Volts; Resistance; Ohms; Current; Amperes.—CHAPTER II: Dynamos; Magnets; Field Coils; Electro Magnets; Permanent Magnets.—CHAPTER III: Armatures, Construction of, Different Kinds of; Commutators, How Made and Connected; Heating of Armatures; Eddy Currents.—CHAPTER IV: The Current; How Produced; Induction; Series Wound Dynamos; Shunt Wound Dynamos; Exciting the Fields; Constant Current and Constant Potential Dynamos; Series and Parallel; Parallel or Multiple Arc System.—CHAPTER V: Incandescent Lamps; Filaments; Connections; Flashing; Exhausting; Testing; Candle Power; Operated in Series; Automatic Cut-Out; In Multiple Arc or Parallel; Multiple Series; Multiple Series Cut-Out; Three Wire System.—CHAPTER VI: The Arc Light; How Formed; Causes of Unsteadiness; Remedy; Effect of Shades or Globes; Shape of Carbons under Different Conditions of Burning; Arc Lamps; Regulating and Cut-Out Mechanism; Action of Current; Clutch Lamps; Clockwork Lamps; Double Lamps; Troubles in Lamps.—CHAPTER VII: Commutators and Brushes; The Brush Commutators; Brushes; Different Styles of Brushes; Double Brushes; Single Brushes; Troubles with Commutators and Brushes; Correct Position of Brushes; Sparking at Brushes; Care of Brushes and Commutators; Flashing.—CHAPTER VIII: Current Regulation; Hand Regulation; By Position of Brushes; Resistance Box; Resistance Coils.—CHAPTER IX: American System of Automatic Current Regulation; The Dynamo; Regulator; Action of Regulator.—CHAPTER X: Brush System of Automatic Current Regulation; Brush Armature; Diagram of Circuits through Dynamo, Regulator and Lamps; Dial or Regulator; Care and Adjustment of Dial: Dial Controller; Circuits and Connections of No. 8 Brush Dynamo; Circuits of Compound Wound Constant Potential Brush Dynamo.—CHAPTER XI: The Edison System; Automatic Regulator; Circuits of Regulator; Circuits of Dynamo; Action of Regulator; Howell Pressure Indicator; Diagram of Circuits; Description of Parts and Operation.—CHAPTER XII: Excelsior System of Automatic Current Regulation; Dynamo; Armature; Diagram of Circuits; The Regulator and Motor; Action of Regulator.—CHAPTER XIII; Schuyler System of Automatic Current Regulation; Dynamo; Armature, Commutator and Brushes; Diagram of Circuits in Armature and Field; Regulator; Circuits in Regulator —CHAPTER XIV: Thomson-Houston System of Automatic Current Regulation; Dynamo; Armature; Commutator and Brushes; Controlling Magnet; Wall Controller; Diagram of Circuits; Air Blast.—CHAPTER XV: Waterhouse System of Three-Brush Automatic Current Regulation; Dynamo; Extra Brush; Resistance Coils and Regulator.—CHAPTER XVI: Ampere-Meters; Tangential Scale; Solenoid Meters.—CHAPTER XVII: Voltmeters; Pressure and Potential Indicators.—CHAPTER XVIII: Testing; Galvanometers; Astatic Needle; Differential Apparatus.—CHAPTER XIX: Wheatstone Bridge or Electrical Balance; Diagram of Circuits and Methods of Use; Bridge and Rheostat; Round Form; Square Form.—CHAPTER XX: The Magneto as a Testing Instrument; Armature; Field; Bell; Diagram of Circuits.—CHAPTER XXI: Coupling Dynamos Together; In Series; In Shunt; Series, Shunt and Compound Wound Machines.—CHAPTER XXII: Switches and Switchboards; Loop Switch; Plug and Socket; Change Over Plug and Socket; Conclusion. CHAPTER XXIII: Electric Motors, General Principles the Same as in Dynamos; Types; Shunt and Series Motors Suitable for all General Purposes; Regulation of Shunt Motors; Of Series Motors; Counter E. M. F.; Direction of Rotation and Direction of Current; Starting Motors; Diagram of Connection.

**PART II. CONTENTS.**—CHAPTER I: Alternate Current Dynamos; Principles of the Field. Field Current Armature; Winding; Connections; Lamination; Different Types of Alternators; Regulation; Leading Systems; The Brush Generators; Magnets; Armature; Principles of Induction.—CHAPTER II: Dynamos, Continued; The Mordey Alternator; Stationary Armatures; Field Magnets; Ferranti Armature, Field Magnets; Winding; Collectors.—CHAPTER III: Dynamos, Concluded; Siemens Dynamo; Best Magnetic Circuits; Stanley Constant Current Dynamo; The Armature; Self Induction; Regulation —CHAPTER IV: Induction Coils; Converters; Transformers; Economy of Distribution; An Electrical H. P.; Losses in Conductor; Induction Coils; Effect of Induction; Transformers.—CHAPTER V; Transformers, Continued; Induction Coils; Converters; Transforming Up and Down; Design of Transformers; The Static Charge; Protection Against; Grounding the Secondary; Other Devices; The Foil Protector; Different Types of Transformers.—CHAPTER VI: Transformers, Concluded; Fuses; Regulation; Winding of Transformers; Connecting to Circuit; Regulation; Safety Fuses.—CHAPTER VII: Parallel System; Series Arc Light System; Diagram of Circuits; Parallel System; Primary Circuit; Secondary Circuit; Placing of Transformers; Fuses; Diagram of Series Arc Light Circuit —CHAPTER VIII: Lines of Force; Hysteresis; Magnetic Penetration; The Circuit of Lines of Force; Experiments with Magnet; Rapidity of Reversals and Hysteresis.—CHAPTER IX: Arc Lamps; In Series; The Westinghouse Arc Lamp; Diagram of Circuits in Lamp; Action of the Mechanism; Flat Carbons.—CHAPTER X: Arc Lamps, in Multiple; Slattery Differential Lamp; Mechanism of Lamp; Its Operation.—CHAPTER XI: Measuring and Indicating Apparatus; Instruments for Use with Alternating Currents Differ from those used with Continuous Currents; Ammeters; Voltmeters; Description of Several Forms of Instruments.—CHAPTER XII: Measuring Instruments, Continued; Hot Wire Instruments; The Cardew Voltmeter; Details of the Instrument; Low Potential Voltmeter.—CHAPTER XIII: Voltmeters; Double Coil Voltmeter; Two Types.—CHAPTER XIV: Spring Meters; Curled Spring Meter.—CHAPTER XV: Twisted Strip Instruments; Diagram of Connections and Operation of Instrument.—CHAPTER XVI: Recording Meters; Stanley Meter; Construction and Principles of Operation; Diagrams of Parts; Slattery Induction Meter; Description of Parts and Principles of Operation; Watt Meter; Thomson Meter.—CHAPTER XVII: Generators in Parallel; Difficulties in Operating; Alternate Current Generators in Parallel; Arrangements of Circuits and Machines for Operating in Parallel; Diagram of Common Arrangement of Machines and Circuits.—CHAPTER XVIII: Ohm's Law; Strength of Current; Formulas and Examples; Power and Heating Effects of Currents.—CHAPTER XIX: Ground Alarms and Leak Detectors.

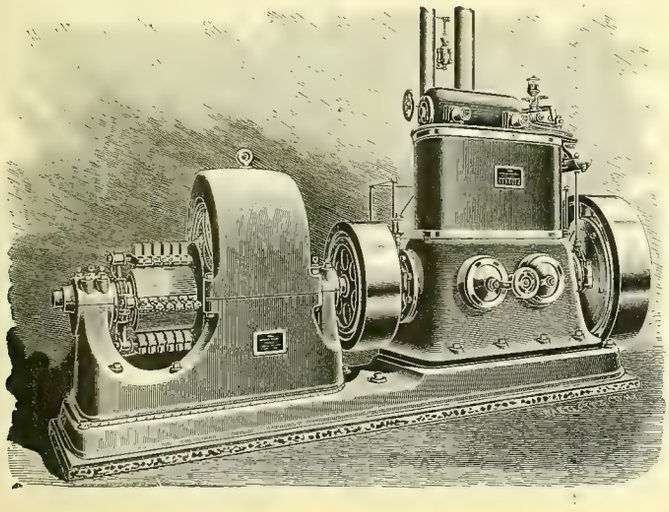
## ELECTRICIAN PUBLISHING CO., 6 Lakeside Bldg., Chicago.



STEAM POWER PLANTS
—OF—
HIGH EFFICIENCY
*ARE EQUIPPED WITH*
WESTINGHOUSE ENGINES.

THREE TYPES:

**COMPOUND, 35 to 1,000 H. P.,** Unequaled adaptability, high fuel duty and moderate cost
**STANDARD, 5 to 250 H. P.,** High-class automatic engine for general service.
**JUNIOR, 5 to 75 H. P.,** A durable and efficient automatic engine at a low price.

CATALOGUE ON APPLICATION.

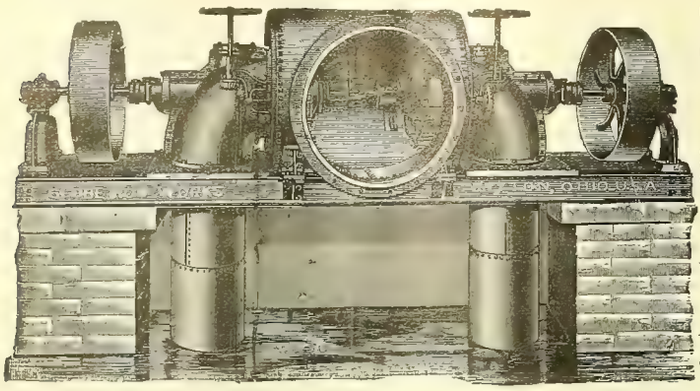
All Offices of the Westinghouse Electric & Mfg. Co. And All Foreign Countries.



# Progress the Order of the Age.

## THE NEW AMERICAN LEADS.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickman, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

**Test of a 45-inch Wheel—July 9, 1894.**

## CALIFORNIA EXCURSIONS.

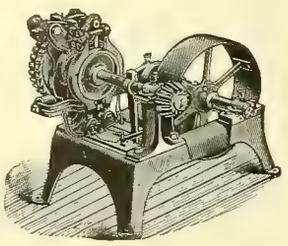
**PERSONALLY CONDUCTED.**

Leave Chicago via the Burlington Route (C. B. & Q. R. R.) every Wednesday at 6.35 p. m. Route via Denver, Denver & Rio Grande Ry. (the scenic line) and Salt Lake City. These excursions are accompanied by an experienced agent, of the Burlington Route, thoroughly familiar with California. The latest model of Pullman tourist sleeping cars are used. They are fitted with every comfort; carpets, upholstered seats, matt esses, pillows, bed linen, toilet rooms, etc. They lack onlysome of the expensive finish of the Pullmans run on the limited express trains, while the cost per berth is only about one-third. Ask your nearest ticket agent for particulars and descriptive folders, or write to T. A. Grady, Manager Burlington Route Excursion Bureau, 211 Clark Street Chicago, Ill.

## Going to California.

The Burlington Route is the only railway running "Personally Conducted" Excursions via Denver to Colorado Springs, Salt Lake, Ogden, Sacramento, San Francisco, Stockton, Merced, Fresno, Bakersfield, and Los Angeles at the lowest rates and without change of cars.

Leave Chicago every Wednesday. Write or call on T. A. Grady, Excursion Manager, 211 Clark Street, Chicago



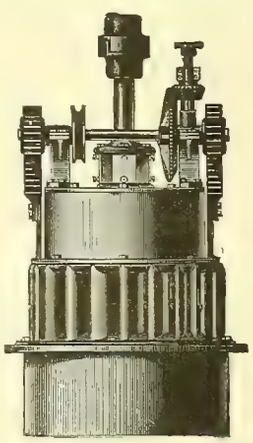
# WATER POWER.

## GOVERNED FOR ELECTRICAL WORK.

The limit of government of water-power is often determined by the design and construction of plant. Consult us if possible before completing your plans.

With **REPLOGLE'S COMPOUND REGULATORS** we are prepared to undertake and **guarantee** the government of water-power for all purposes, including **Electric Railway, Power and Lighting Plants.** We make and sell all of Replogle's Electrical and Mechanical Governors and other devices for the government of water-power. Expert advice furnished on application. If results of your present system are not satisfactory, write us. Address all inquiries to

**THE REPLOGLE GOVERNOR WORKS,**
MARK A. REPLOGLE, Chief Engineer. **AKRON, OHIO.**



# THE McCORMICK TURBINE,

**On Vertical or Horizontal Shaft, Especially Adapted for Electric Work.**

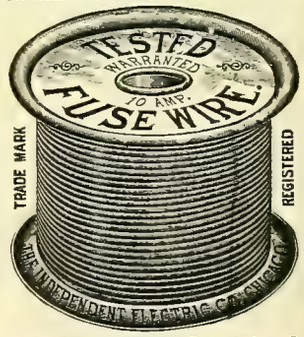
**Gives more power as to diameter with a higher percentage of useful effect than any other water-wheel heretofore made.** All sizes, right and left hand, are built from patterns perfected under systematic tests in the Holyoke Testing Flume.

Parties having power plants which are unsatisfactory, and those contemplating the improvement of powers, will find it to their interest to confer with me, **as I am willing to guarantee results where others have failed, no matter what make of turbine has been in use. STATE REQUIREMENTS AND SEND FOR CATALOGUE.**

**S. MORGAN SMITH, York, Pa.**

**Estimates furnished for complete power plants and results guaranteed.**

**FUSE WIRE AND LINKS FOR ALL SYSTEMS.** } Correct Carrying Capacity. Absolutely Uniform.



**The Independent Electric Co.,**
**39th St and Stewart Ave., Chicago.**

# Electric Railway Supplies,

**The largest and most prosperous street railway companies in the country are using our supplies, and they prefer them to all others on account of greater strength and durability. Correspondence Solicited.**

These are not results from "manufacturers' tests," but are from the regular tests of a large central station, the lamps being taken at random from a shipment of 2,000. The letter accompanying the above states: "**The lamps were burned during the test at a voltage about 2 per cent. to 4 per cent. above that for which they are marked, and at which the candle power and current measurements were made.**"

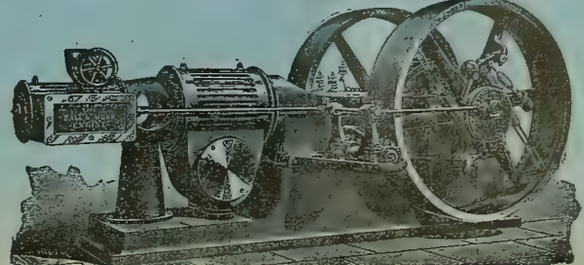
**THE BALL & WOOD COMPANY,**

Builders of Improved Automatic Cut-off Engines.



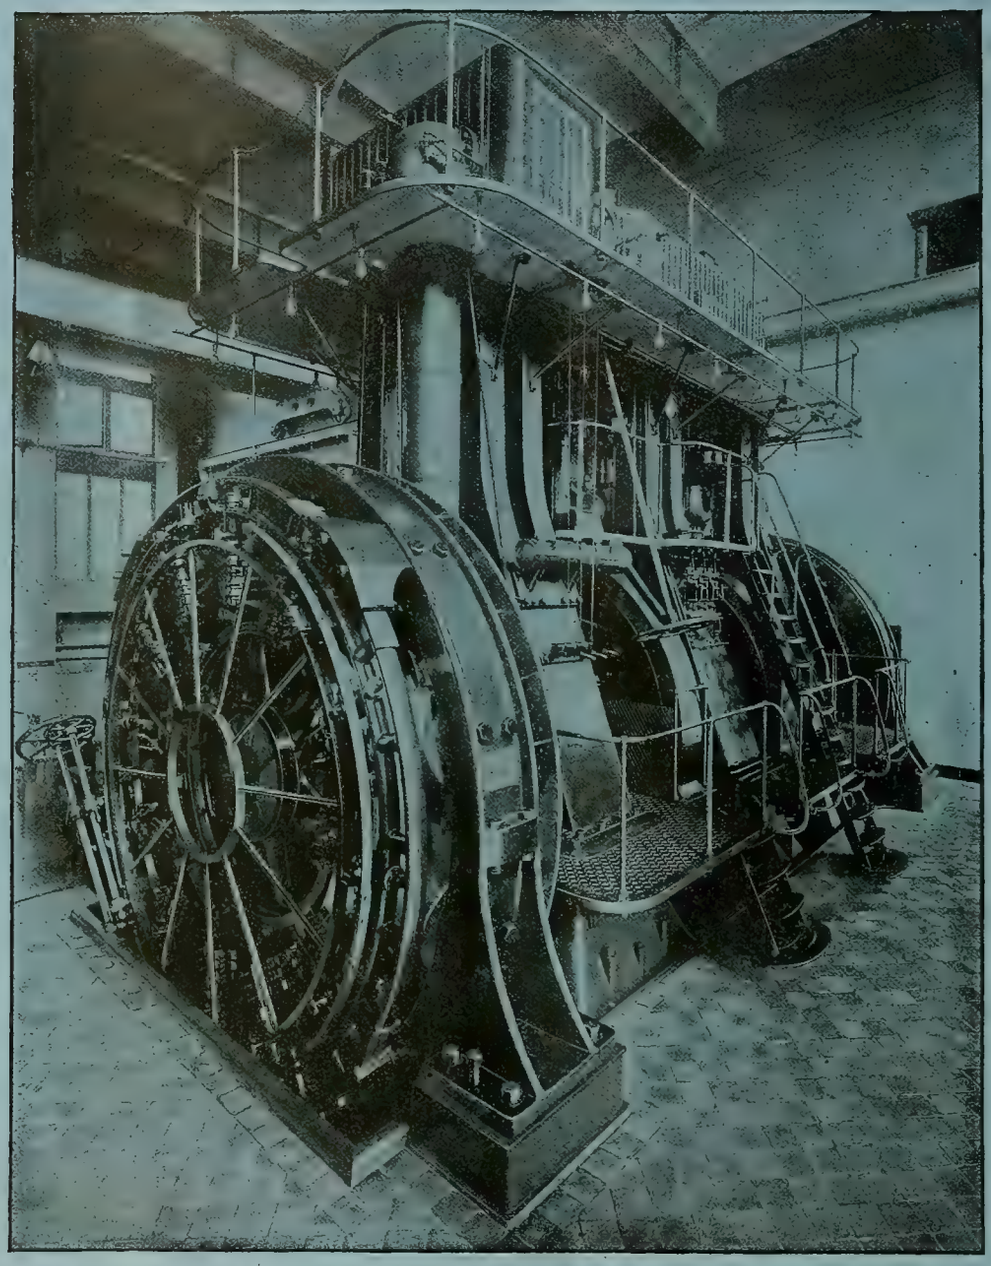
REPRESENTATIVES:

Stern & Silverman, 707 Arch St., Philadelphia, Pa.
George M. Kenyon, Endicott Arcade, St. Paul, Minn.
C. E. Sargent, Fort Dearborn Bldg., Chicago, Ill.
James & Company, Chattanooga, Tenn.

DIRECT-CONNECTED

# GENERATORS

## For Central Stations and Isolated Plants.



**Two 400 K. W. Generators in Edison Electric Illuminating Station, Brooklyn, N. Y. Direct-Connected to a Triple Expansion Vertical Engine.**

Our Generators are constructed to meet the most stringent requirements of electric lighting practice. In design and workmanship their superiority is acknowledged. The frames and pole pieces are of cast steel; the armature windings of copper bars, and the insulation of the best obtainable and most carefully supplied. Thorough ventilation of the armature is provided. The commutator and brushes are perfect in their operation under all conditions of load, and the machines are practically sparkless. The largest electric lighting stations in the world are using Direct-Connected Generators of our make, while the smaller s zed machines will be found in the majority of modern isolated plants.

**CARPENTER ENAMEL RHEOSTATS.**

# CHICAGO EDISON CO.,

139 ADAMS ST., CHICAGO, ILL.

DEALERS IN Electric Lighting **SUPPLIES,** Incandescent Lamps OF ALL CANDLE POWERS.

**NATIONAL CARBONS AND BRUSHES,**
**HARDTMUTH CORED AND SOLID CARBONS,**
**KNIFE SWITCHES, FROM 10 TO 1,000 AMPERES,** IN **STOCK.**
**CUT-OUTS, SOCKETS, ARC LAMPS AND GLOBES,**
**RUBBER COVERED WIRES, NORWICH CABLES, Etc.**

## ARC LAMPS!!

**For Incandescent Circuits. For Direct Current.**
**For Alternating Current. For Railway Circuits.**
**Focusing, Twin and Series Lamps.**
**All new lamps, all in perfect order and ready for use.**

## CARBONS!!

**High Class Foreign and Domestic.**
**Cored Carbons, Tested Carbons.**
**Siemans & Halske, Lacombe, Hardtmuth, Ship Cored, National, Fidelity, Solar and Globe Carbons.**
**These Standard Goods MUST BE SOLD to close an Estate. Write for particulars to**

**CHAS. H. WATERMAN,**
1305 Havemeyer Building,
26 Cortlandt Street, NEW YORK.

Sales Agent for { Wm. J. Hammer, John F. Randolph, } Assignees for Francis R. Upton.

## Gordon Primary Battery

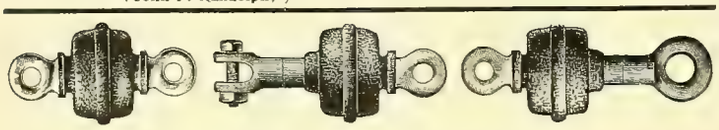
EXCELS IN

Long Life, Efficiency,
Economy, Adaptability.
It is Absolutely Non Freezing,
Labor Saving,
Free from Local Action,
Freedom from Gases and Odors.
Superior Generation of Energy.

These Batteries are in use by the most prominent Telephone, Fire Alarm and Railroad Companies of America.
Send for descriptive circular and price list.
We guarantee all our Cells.

MANUFACTURED BY

**The Gordon-Burnham Battery Co.,**
**82 West Broadway, New York.**



## Giant Strain Insulators.

Insulated with **Moulded Mica.** Hangers, Pull-Overs, Feed-Wire Insulators, Frogs, Section Insulators, etc.

VULCABESTON CONTROLLER REPAIR PARTS.

**H. W. JOHNS MFG. CO.,**
240-242 Randolph St., Chicago.

NEW YORK. PHILADELPHIA. BOSTON.

## THE UPTON ARC LAMP

**For All Circuits.**

**The Cheapest to Buy, Use and Maintain.**

## Standard Thermometer Co.,

PEABODY, MASS.

The Original Manufacturers of the

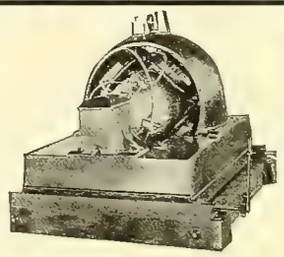
***SIMPLEX, WARD and KNIGHT LAMPS.***

CHARLES A. BRAMHALL, Selling Agent, 39 Cortlandt Street, NEW YORK.

## CARD

Generators for Power Transmission or Isolated Lighting.
CARD Generators are all Multipolar and Slow Speed.

AGENTS WANTED IN UNOCCUPIED TERRITORY.



75 K. W. GENERATOR.

## CARD

Multipolar Slow Speed Stationary Motors.
Reversible Motors and Controllers for Rolling Mills, Bridges and Traveling Cranes.

**THE CARD ELECTRIC COMPANY,**
Office and Works, Mansfield, Ohio.

THE PIONEER FIRM.
American Branch Office, 60 Liberty St., New York.

## F. HARDTMUTH & CO., VIENNA, AUSTRIA,

THE ONLY MANUFACTURERS OF

THE PIONEER FIRM.
Beware of Impostors Claiming our Make.

# "The Celebrated Austrian Cored Carbons."

Send for Reduced Price Lists or Samples.
Alternating or Direct Cored Carbons One Price.

Special Quotations for Export Trade.
Leading Supply Houses Carry our Goods.

# Electric Railway Supplies.

We are the General Western Agents for the Billings & Spencer Drop Forged

## Trolley Equipments and Commutator Segments.

We can supply Segments from stock to fit all standard machines. These Segments are made from pure lake copper, finished and tempered to give a compact, uniform wearing surface.

## Overhead Material.

We carry a large stock of Drop-Forged Straight-Line Hangers, Single and Double Curve Pull-Offs, Bracket-Arm Insulators, Barn and Bridge Hangers, Feed Wire Hangers, Trolley Wire Clamps, etc.

## Central Trolley Harp and Wheel.

This harp is made of malleable iron or brass, and is strong and well designed. The wheels are of bronze and have the best grade of graphite bushings. The entire construction is such that it cannot engage with, and tear down, span wires. We recommend the Central Harp and Wheel to our customers as being a superior article in every way.

Prompt shipment of all goods from Chicago stock.

GEO. A. McKINLOCK, President. CHAS. E. BROWN, Secretary.

## Central Electric Company,

**173-175 Adams Street,**

**CHICAGO.**

**St. Louis,**
**Southern Electrical Supply Co.**

**New Orleans,**
**1010 Canal St.**

**Kansas City,**
**Gate City Electric Co.**

**Buffalo: 112 White Building.**

## Chicago Tales.

THE REAR platform of the cable car stood a rather short and florid man with his coat collar turned up.

He did not say anything until the conductor gave a signal to go ahead, just as a woman put her hand on the rail. The woman had to jump to avoid being left.

"You're a little too quick with the bell," remarked the passenger who had his collar turned up.

"I am, am I?" asked the conductor, turning about and glaring at the short man. "Who's running this car?"

"You are to-night. I don't know who'll be running it to-morrow."

"Well, I know my business, and I don't want any lip from anybody, see?"

"You probably never stopped to consider the extent of your authority," said the short man softly. "It seems to me that a passenger has a right to call attention to the fact that you are too quick with the bell."

"Humph! What are you going to do about it? Take my number?"

"Yes, I thought I would."

"Well, there it is; can you see it? Take the number on my cap and the number of the car."

"All right, I've got them. I think this is the last trip you'll make on this car to-night."

"Say, I meet fellows like you every day. You're talking through your hat."

"That'll be all right. Let me off at the next corner."

The short and soft-spoken man alighted, followed by the defiant grin of the conductor.

When that car reached the limits station the superintendent of the place was waiting for the conductor.

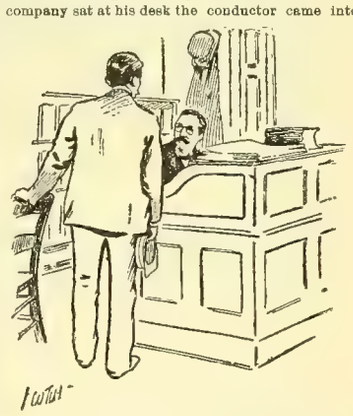
"I've put another man on your car," said he. "You're laid off."

"Laid off? What for?"

"You can find out later. I just received a telephone message from the general solicitor to be sure and have some one else take your car out on the next trip. Don't you know what's the trouble?"

"Why, no. I haven't seen—hold on! That must have been him on the back platform."

Next morning as the general solicitor of the company sat at his desk the conductor came into



CAME TO SQUARE HIMSELF.

the room and humbly waited for a chance to "square himself."

He was contrite and worried, but he made a mistake in his effort to explain matters.

"I'm mighty sorry," said he, "but I didn't know you was an officer of the company."

"Stop right there! What difference should that have made? I didn't speak to you as an officer of the company. I simply said to you that you were too quick with the bell. You didn't give that woman time to get on the car. Then you turned on me as if it were a presumption for any passenger to offer suggestions. I have no doubt you are a faithful employe. Your record shows that you are all right, but I want to impress on you that passengers have rights that conductors must respect."

In a couple of days the conductor was reinstated, but the story of his experience must have been passed around. One evening the attorney for the company was returning home on a crowded car with an earnest gripman on the front.

Every time the car started it made a sudden lunge and nearly upset everyone. The attorney motioned to the conductor and said: "I wish you'd tell that gripman to be a little easier in catching the cable."

The conductor said "Certainly" and went forward. After that the passenger had a smooth voyage. —*Chicago Record.*

# THE TELEPHONE HAND-BOOK

BY HERBERT LAWS WEBB.

*Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."*

146 Pages, 138 Illustrations, Cloth, Hand-Book Size, Price $1.00.

EXTRACT FROM PREFACE.

"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and THE TELEPHONE HAND BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that any one can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS.

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magnet Telephones.
9. The Bell Telephone Receiver
10. Other Forms of Magnet Telephones.
11. The Gower, Ader and D'Arsonval Receivers. Mercadier's Bi-Telephone.
12. The Siemens, Kotyra, Neumayer and Böttcher Receivers.
13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The Solid-back Transmitter.
17. The Berliner Transmitter.
18. The Cuttriss Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries.
25. Magneto Bells.
26. Automatic Switches.
27. Telephone Line Construction.
28. Metallic Circuits.
29. Underground Wires.
30. Lightning Arresters.
31. Inside Wiring.
32. Installation of Telephone Instruments.
33. Inspection and Maintenance.
34. The Condenser: its Use in Telephony.
35. Electromagnetic Retardation.
36. Exchange Working.
37. Small Exchanges.
38. Party Lines: The Bridging Bell.
39. Long Distance Telephony.
40. Duplex Telephony.
41. Simultaneous Telegraphy and Telephony.
Appendix.

## THROWING MONEY AWAY

Expresses exactly what is being done by so many stations all over the country in the purchase of supplies and equipment. Note the following example:

## EXAMPLE No. 1.

The purchase of a cheap "so called" weatherproof wire at a "job lot" bargain when a fraction of a cent per pound more would have equipped your lines with **"O. K."** weatherproof wire—the best made. The increased insulation leakage of the cheaper wire, during every rain-storm, will more than eat up the difference in cost, and this loss continues month after month and year after year.

We will give

## ADDITIONAL EXAMPLES

From time to time which will be worthy of careful thought.

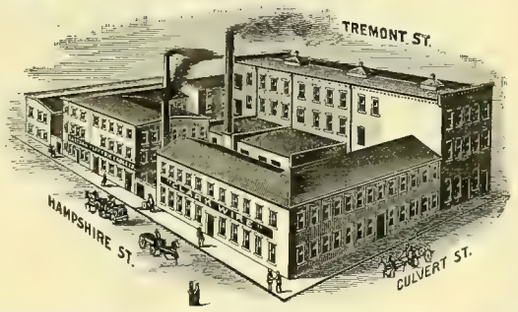
# "CLARK" WIRE.

TRADE MARK.



For Switchboard, Railway and Motor use, we make all sizes of Stranded and Flexible Wire and Cables with Clark's Insulation.

The Clark Wire has been before the public and in use for the past nine years, and has met with universal favor. Thousands of miles of this wire have been sold, and are in use throughout the United States and Foreign Countries, and the demand for it is constantly increasing, because it always gives perfect satisfaction.

BRANCH OFFICE:

1649, 1650, 1651 MONADNOCK BLDG.,
CHICAGO, ILLINOIS.

In a Letter from the Inspector of the Boston Fire Underwriters' Union, he states: "A Thoroughly Reliable and Desirable Wire in every respect."

The Rubber used in insulating our Wires and Cables is especially chemically prepared, and will not deteriorate, oxidize or crack, and will remain flexible in extreme cold weather, and is not affected by heat.

We guarantee our Insulation wherever used, Aerial, Underground or Submarine, and our net prices are as low, if not lower, than any other first-class Insulated Wire.

We shall be pleased to mail Catalogues with Terms and Discounts for Quantities.

## DOMESTIC ELECTRICAL WORK.

Concise and Practical Explanations for Plumbers, Tinners and Hardware Dealers on How to Wire Buildings for Bells, Alarms, Annunciators, and for Gas Lighting from Batteries.

*Illustrated with Twenty-two Diagrams.*

By WILLIAM A. WITTBECKER.

Price in Paper, 25 Cents.
Price in Cloth, 50 Cents.

THE growing demand for simple electrical apparatus in dwelling houses, offices and workshops, and the need of plain instructions whereby any person without a previous knowledge of electricity may be enabled to undertake their successful installation, has prompted the publication of this little book. It is not intended for the amateur who seeks for nothing but experimental work, neither is it expected to enlighten the expert electrician; but to the person who is seeking for information that will assist him in increasing his daily earnings this little volume is addressed.

The information given is above all else practical, and with a close observance of the directions laid down anyone without the slightest knowledge of electricity should be able to do the work described.

# KNOWLEDGE IS POWER.

Everyone engaged in the electrical business should keep posted on the developments in the art by reading the latest books on the subject. We are headquarters in the West for electrical books and can fill orders for any work published, promptly on receipt of price. We call your special attention to the following standard books:

**Allsop, F. C.**—Electrical Bell Construction; Treatise on the Construction of Electric Bells, Indicators, and similar apparatus. 177 illustrations..... $1.25

**Angell, J.**—Elements of Magnetism and Electricity, with Practical Instructions for the Performance of Experiments, and the construction of cheap apparatus. One hundredth thousand. 160 illustrations ..... $1.00

**Atkinson, Philip.** The Elements of Electric Lighting. Seventh edition, fully revised, and new matter added. 104 illustrations. 260 pages ..... $1.50

**Atkinson, Philip.** The Elements of Dynamic Electricity and Magnetism. 405 pages and 117 illustrations. Second edition..... $2.00

**Ayrton, W. E.**—Practical Electricity: a Laboratory and Lecture Course for First year Students of Electrical Engineering, based on the Practical Definitions of the Electrical Units. With numerous illustrations. Sixth edition..... $2.50

**Badt, Lieut. F. B.**—New Dynamo Tenders' Hand Book. This is, as the name indicates, a **New Book**, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers, and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 226 pages, 140 illustrations, flexible cloth binding, size of type page 5½x3 inches ..... $1.00

**Badt, Lieut. F. B.**—Incandescent Wiring Hand-book. A timely book containing full illustrations for incandescent wiring and complete information concerning methods of running wires, location of safety devices, splices, insulation, testing for faults, wire gauges, general electrical data, calculating sizes of wires, wiring fixtures, elevators, buildings, isolated and central station plants. The only book of the kind published. Type page 5½x3 inches, flexible cloth binding. 66 pages, 35 cuts and 5 tables, 3 of which are 12x18 inches ..... $1.00

**Badt, Lieut. F. B.**—Bell Hangers' Hand-book. Just the book for people engaged in selling, installing or handling electric batteries, electric bells, elevators, house or hotel annunciators, burglar or fire alarms, electric gas lighting apparatus, electric heat apparatus. 108 pages, 97 illustrations, flexible cloth binding. Type page 5½x3 inches $1.00

**Badt, Lieut F. B.**—Electric Transmission Hand-book. First edition, three thousand copies. 97 pages, 22 illustrations, 27 original tables..... $1.00

Gives more *Practical* information on the subject than any work published to date. The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers and Motor Inspectors. With this book anybody may make estimates on the cost of Transmission Plants.

**Bedell, Fred'k and Albert C. Crehore.**—Alternating Currents; An Analytical and Graphical Treatment for Students and Engineers. Second edition. 112 illustrations..... $2.50

**Blakesley, T. H.**—Papers on Alternating Currents of Electricity for the use of Students and Engineers. Third edition, enlarged. 12mo, cloth..... $1.50

**Bonney, G. E.** Electro-Plater's Hand Book. A Manual for Amateurs and Young Students on Electro-Metallurgy. 60 illustrations. 208 pages. 12mo, cloth..... $1.25

**Bottone, S. R.**—Electrical Instrument Making for Amateurs. A Practical Hand-book, with 48 illustrations. Fourth edition. Enlarged by a chapter on the Telephone. ..... $0.50

**Bottone, S. R.**—The Dynamo, How Made and How Used. A Book for Amateurs. Eighth edition, with additional matter and 39 illustrations..... $1.00

**Bottone, S. R.**—Electro-Motors. How Made and How Used. A Handbook for Amateurs and Practical Men. Reduced to ..... $0.50

**Bottone, S. R.**—How to Manage the Dynamo. A Hand-book for Ship Engineers, Electric Light Engineers and Electro-Platers..... $0.50

**Buckley, W. J.**—Electric Lighting Plants, their cost and operation. 275 pages, many illustrations and diagrams. Cloth..... $2.00
Paper..... 1.00

**Cox, Frank P.**—Continuous Current Dynamos and Motors. An Elementary Treatise for Students and Engineers. Illustrated ..... $2.00

**Crocker, F. B., and Wheeler, S. S.**—The Practical Management of Dynamos and Motors. With a special chapter by H. A. Foster. Illustrated. Second edition, revised and enlarged..... $1.00

**Crosby, O. T., and Dr. Louis Bell.**—The Electric Railway in Theory and Practice. A Complete Treatise on the Construction and Operation of Electric Railways. Second edition, revised and enlarged. 183 illustrations ..... $2.5

**Desmond, Chas.**—Electricity for Engineers. Part I. Constant Current. A clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Indicator and Measuring Instruments; also a full explanation of the electrical terms used in the work. Part II. Alternate Current Apparatus. Containing an explanation of the principles governing the generation of, and a description of the instruments and machinery used in connection with Alternate Electric Currents. Illustrated. Revised edition..... $2.50

**Dyer, A.**—Induction Coils, How Made and How Used. Third edition. Boards..... $0.50

**Fleming, J. A.**—Short Lectures to Electrical Artisans. A course of Experimental Lectures delivered to a Practical Audience. Fourth edition. 74 illustrations. ..... $1.50

**Fleming, J. A.**—The Alternate Current Transformer in Theory and Practice. Vol. I. The Induction of Electric Currents, 500 pages, fully illustrated and with copious index. Second edition..... $3.00

Synopsis of contents: Chapter 1. Introductory. 2. Electro-Magnetic Induction. 3. The Theory of Simple Periodic Currents. 4. Mutual and Self Induction. 5. Dynamical Theory of Current Induction.

Vol. II. The Utilization of Induced Currents. 8vo. cloth. London, 1892..... $5.00

**Gore, G.**—The Art of Electro-Metallurgy, including all Known Processes of Electro Deposition. Fourth edition..... $2.00

**Gordon.**—School Electricity. Sources, Currents, Measurement, Telegraphy, Telephony, Lightning, Electrolysis, Induction, etc. 262 pages, with 140 illustrations..... $2.00

**Grier, Thos. G.**—Wiring for Motor Circuits. A handy little pamphlet containing tables for wiring and for motor service, arranged in convenient form for ready reference. $1.00

**Haskins, C. H.**—The Galvanometer and its Uses. A Manual for Electricians and Students. Fourth edition, revised ..$1.50

**Haskins.**—Transformers. Their Theory, Construction and Application Simplified. 38 illustrations..... $1.25

**Hawkins, C. C. and F. Wallis.**—The Dynamo, its Theory, Design and Manufacture. 190 illustrations ..... $3.00

**Hering.**—Practical Directions for Winding Magnets and Dynamos. 12mo, cloth, reprint without additions. ..$1.25

**Hopkins, Geo. M.**—Experimental Science. Elementary, Practical and Experimental Physics, 650 Illustrations. $4.00

**Hopkinson.**—Original Papers on Dynamo Machinery and Allied Subjects. Illustrated..... $1.00

**Hopkinson, Dr. John.**—Dynamic Electricity; Its Modern Use and Measurement chiefly in its Application to Electric Lighting and Telegraphy..... $0.50

**Hospitalier, E.**—Domestic Electricity for Amateurs, Translated from the French. With additions by C. J. Wharton. With illustrations ..... $2.50

**Houston, Prof. E. J.**—A Dictionary of Electrical Words, Terms and Phrases. Third edition, re-written and greatly enlarged. Large 8vo. 562 pages, and 570 illustrations ..... $5.00

**Kapp, Gisbert.**—Electric Transmission of Energy and its Transformation, Subdivison and Distribution. A practical handbook. Third edition ..... $3.00

**Kapp, Gisbert.**—Alternate Current Machinery Illustrated. $0.50
[Vol. 96 Van Nostrand's Science Series.]

**Kapp, Gisbert.**—Alternating Currents of Electricity. Their Generation, Measurement, Distribution and Application. Authorized American ed. With an introduction by William Stanley, Jr. Illustrated..... $1.00

**Kapp, Gisbert.**—Dynamos, Alternators and Transformers. 138 illustrations..... $4.00

**Kempe, H. R.**—A Handbook of Electrical Testing. Fifth edition. 200 illustrations. 8vo. cloth. London, 1892 .. $7.25

In this edition there is a considerable amount of new matter; the old matter has been thoroughly revised.

**Kempe, H. R.**—The Electrical Engineer's Pocket Book. Modern Rules, Formulæ, Tables and Data. 32mo, leather ..... $1.75

**Lockwood, T. D.**—Electricity, Magnetism and Electric Telegraphy. A Practical Guide and Handbook of General Information for Electrical Students, Operators and Inspectors. 376 pages, 152 Illustrations ..... $2.50

**Lockwood, T. D.**—Electrical Measurement and the Galvanometer; its Construction and Use. Second edition... $1.50

**Lockwood, T. D.** Practical Information for Telephonists. 12mo, cloth N. Y..... $1.00

**Meadowcroft, W. H.**—The A. B. C. of Electricity. 36 illustrations..... $0.50

**Martin, T. C.**—Inventions, Researches and Writings of Nikola Tesla. With special reference to his work in polyphase currents and high potential lighting. 500 pp 300 Illustrations, second edition ..... $4.00

**Martin, T. C. and Wetzler, J.**—The Electric Motor and its Applications. Third edition. With an Appendix on the Development of the Electric Motor since 1888. By Dr. L. Bell. 300 Illustrations ..... $3.00

**Maver, and Davis, M. M.**—The Quadruplex. With Chapters on the Dynamo-Electric Machine in Relation to the Quadruplex. The Practical Working of the Duplex Telegraph Repeaters and the Wheatstone Automatic Telegraph. 63 illustrations ..... $1.50

**McClure, J. B.**—Edison and his Inventions, with Full Explanations of the Telephone, Phonograph, Tasemeter, Electric Light and all his Principal Discoveries, etc. $1.00

**Niaudet, Alfred.**—Elementary Treatise on Electric Batteries. Translated from the French by L. M. Fishback. Illustrated..... $2.50

**Noll, Augustus.**—How to Wire Buildings. A manual of the art of interior wiring. Illustrated..... $1.50

**Pope, Franklin Leonard.**—Modern Practice of the Electric Telegraph. A technical Hand-book for Electricians, Managers and Operators. 185 illustrations. 14th edition, rewritten and enlarged..... $1.50

**Prindle, H. B.**—A Popular Treatise on the Electric Railway of to-day. Fully illustrated..... $0.25

**Russell, Stuart A.**—Electric Light Cables and Distribution of Electricity. 107 illustrations..... $3.25

**Salomons, Sir David.**—Electric Light Installations. Vol. 1. The Management of Accumulators. A Practical Hand-book. 7th edition, revised and enlarged. With illustrations. 12 mo, cl. London, 1893..... $1.50

**Sloane, T. O'Conner.**—Electricity Simplified. The Practice and Theory of Electricity, including a Popular Review of the Theory of Electricity, with Analogies and Examples of its Practical Application in every-day life. Illustrated..... $1.00

**Sloane, T. O'Connor.**—The Standard Electrical Dictionary. A Popular Dictionary of Words and Terms used in the practice of Electrical Engineering, 350 illustrations. $3.00

**Sloane, T. O'Connor.**—Electric Toy Making for Amateurs, including Batteries, Magnets, Motors, Miscellaneous Toys ..... $1.00

**Sloane, T. O'Connor.**—The Arithmetic of Electricity. A Manual of Electrical Calculations by Arithmetical Methods including numerous rules, examples and tables in the field of practical electrical engineering and experimenting. Third edition, revised..... $1.00

**Tesla, Nikola.**—Experiments with Alternate Currents of High Potential and High Frequency. A lecture delivered before the Institution of Electrical Engineers, London. With a portrait and biographical sketch of the Author Illustrated..... $1.00

**Tesla, Nikola.**—Lectures on the Electro-Magnet. Illustrated, ..... $1.00

**Thurston, Prof. R. H.**—Stationary Steam Engines, especially adapted to Electric Lighting Purposes. Treating of the development of Steam Engines, the Principles of Construction and Economy, with description of Moderate and High Speed Engines. With many folding plates..... $1.50

**Thomson, Prof. Elihu.**—What is Electricity? Illustrated. $0.25

**Thompson, Sylvanus P.**—Dynamo-Electric Machinery. A Series of Lectures, with an introduction by Franklin L. Pope. 16mo. Numerous illustrations fancy boards (Van Nostrand's Science Series, No. 66) ..... $0.50

**Thompson, Sylvanus P.**—Polyphase Electric Currents and Alternate-Current Motors. Mailed to any address in the world on receipt of ..... $3.50

**Thompson, Sylvanus P.**—Recent Progress in Dynamo-Electric Machines, being a Supplement to Dynamo-Electric Machinery. 16mo. (Van Nostrand's Science Series, No. 75)..... $0.50

**Thompson, Sylvanus P.**—Dynamo-Electric Machinery. Fourth edition, revised and rewritten. Numerous illustrations and 29 plates. 1000 pages..... $6.00

**Trevert.**—How to Make Electric Batteries at Home. Illustrated..... $0.25

**Urquhart.**—Electro-Plating. A Practical Hand-book on the Deposition of Copper, Silver, Nickel, Gold, Aluminum, Brass, Platinum, etc. Second edition; carefully revised, with additions ..... $2.00

**Walker, F.**—Practical Dynamo Building for Amateurs. How to wind for any output. With numerous illustrations. 16mo. boards. (Van Nostrand's Science Series, No. 98). $0.50

**Webb, H. L.**—A practical Guide to the Testing of Insulated Wires and Cables. Illustrated..... $1.00

**Webb, Herbert Laws.**—Telephone Hand-book, Illustrated. 12mo, cloth. Chicago, 1894..... $1.00

The only complete work on the Telephone. All possible information for any one interested in Telephones and how to make and operate them.

We invite competition with all other instruments, and send Phones for test to any part of the United States.

It is Absolutely Non-Infringing.
We Guarantee Protection to All Customers

**TESTIMONIALS.**

We submit among hundreds of others the following testimonials, and call attention to the fact that they are from expert electricians, managers of exchanges and superintendents of railroad telegraph.

"A whisper is distintly heard. We pronounce the Standard perfect." STEELE CO. (N. D.) TEL. CO.

"We talked to Rowell, 75 miles, through storm induction. Have discarded the Bell for Standard." PECOS IRRIGATION & IMP. CO., Eddy, New Mexico.

"Have used Cushman, Harrison and Bell, but consider the Standard far superior." C. A. ROOD, Reedsburg, Wis.

"I should recommend Standard to our people, as against any other with which I am familiar. The test we gave was between St. Paul and Dickinson, 559 miles." O. C. GREENE, Supt. Telg. Northern Pacific Ry.

"Your instruments are working very nicely and every one exceedingly pleased with them. You will have all the business you can do." HOME TELEPHONE CO., Sioux City, Iowa.

"The Standard when known will knock out inferior instuments." U. J. FRY, Supt. Tel. C., M. & St. P. Ry.

"Better than any of the others we have." E. PENNINGTON, Supt. Tel. "Soo" Ry.

"Have given Standard extremely hard test where induction is heavy, with most satisfactory results." J. R. MICHAELS, Supt. Tel. St. Paul & Duluth Ry.

"The Standard will transmit a whisper or a shout with equal clearness." HUMPHREY JONES, Washington C. H., Ohio.

"Their efficiency and working is perfect. We shall use nothing but Standard." GALLAGHER BROS. Meridian, Miss.

**CORRESPONDENCE SOLICITED.**

# Progress the Order of the Age.

## THE NEW AMERICAN LEADS.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickman, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

**Test of a 45-inch Wheel—July 9, 1894.**

Specially designed and adapted to

## ELECTRIC POWER AND LIGHTNING PLANTS.

Securing a **high guaranteed percentage** and **great steadiness** of motion, under variable loads. An **unequaled concentration** of power, and an **unprecedented high velocity.** Its **quickly operating balanced gates,** affords **prompt** and **fine regulation** by governor. **Satisfaction guaranteed where others fail.** Write for catalogue, and state your wants.

**JAMES LEFFEL & CO., Springfield, Ohio, U. S. A**

---

# New Dynamo Tenders' Hand-Book.

By F. B. BADT.

**226 Pages, 140 Illustrations. Flexible Cloth Binding. Size of Type Page 5 1-2x3 inches. Price $1.00.**

This is, as the name indicates, a NEW BOOK, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers, and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 9,000 copies of the old Dynamo Tenders' Hand-Book sold, and over 5,000 of the new.

## CALIFORNIA EXCURSIONS.

**PERSONALLY CONDUCTED.**

Leave Chicago via the Burlington Route (C. B. & Q. R. R.) every Wednesday at 6.35 p. m. Route via Denver, Denver & Rio Grande Ry. (the scenic line) and Salt Lake City. These excursions are accompanied by an experienced agent, of the Burlington Route, thoroughly familiar with California. The latest model of Pullman tourist sleeping cars are used. They are fitted with every comfort; carpets, upholstered seats, matt esses, pillows, bed linen, toilet rooms, etc. They lack only some of the expensive finish of the Pullmans run on the limited express trains, while the cost per berth is only about one-third. Ask your nearest ticket agent for particulars and descriptive folders, or write to T. A. Grady, Manager Burlington Route Excursion Bureau, 211 Clark Street Chicago, Ill.

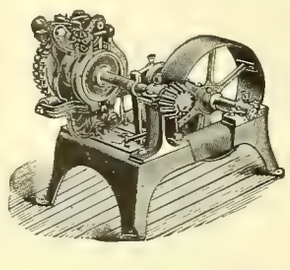
---

# Going to California.

The Burlington Route is the only railway running "Personally Conducted" Excursions via Denver to Colorado Springs, Salt Lake, Ogden, Sacramento, San Francisco, Stockton, Merced, Fresno, Bakersfield, and Los Angeles at the lowest rates and without change of cars.

Leave Chicago every Wednesday. Write or call on T. A. Grady, Excursion Manager, 211 Clark Street, Chicago

---



# WATER POWER.

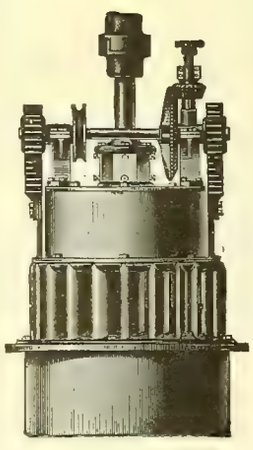
## GOVERNED FOR ELECTRICAL WORK.

The limit of government of water-power is often determined by the design and construction of plant. Consult us if possible before completing your plans.

With **REPLOGLE'S COMPOUND REGULATORS** we are prepared to undertake and **guarantee** the government of water-power for all purposes, including **Electric Railway, Power and Lighting Plants.** We make and sell all of Replogle's Electrical and Mechanical Governors and other devices for the government of water-power. Expert advice furnished on application. If results of your present system are not satisfactory, write us. Address all inquiries to

**THE REPLOGLE GOVERNOR WORKS,**
MARK A. REPLOGLE, Chief Engineer. **AKRON, OHIO.**

---



# THE McCORMICK TURBINE,

**On Vertical or Horizontal Shaft, Especially Adapted for Electric Work.**

**Gives more power as to diameter with a higher percentage of useful effect than any other water-wheel heretofore made.** All sizes, right and left hand, are built from patterns perfected under systematic tests in the Holyoke Testing Flume.

Parties having power plants which are unsatisfactory, and those contemplating the improvement of powers, will find it to their interest to confer with me, **as I am willing to guarantee results where others have failed, no matter what make of turbine has been in use. STATE REQUIREMENTS AND SEND FOR CATALOGUE.**

**S. MORGAN SMITH, York, Pa.**

**Estimates furnished for complete power plants and results guaranteed.**

---

**FUSE WIRE AND LINKS FOR ALL SYSTEMS,** } Correct Carrying Capacity. Absolutely Uniform.

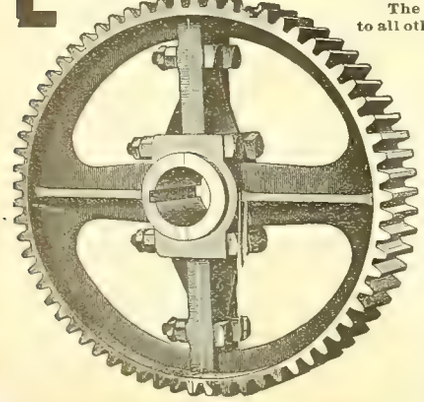
**The Independent Electric Co.,**
39th St and Stewart Ave., Chicago.

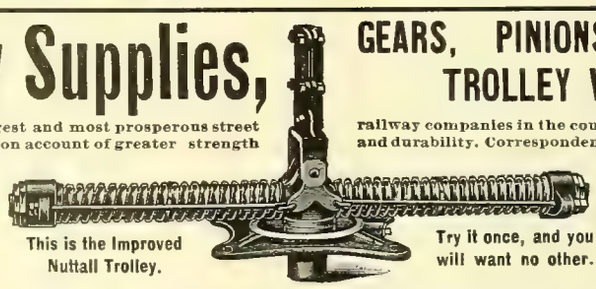
---

# Electric Railway Supplies,

The largest and most prosperous street railway companies in the country are using our supplies, and they prefer them to all others on account of greater strength and durability. Correspondence Solicited.

## GEARS, PINIONS, BEARINGS, TROLLEYS, TROLLEY WHEELS AND HARPS.





This is the Improved Nuttall Trolley.

Try it once, and you will want no other.

These are not results from "manufacturers' tests," but are from the regular tests of a large central station, the lamps being taken at random from a shipment of 2,000. The letter accompanying the above states: **"The lamps were burned during the test at a voltage about 2 per cent. to 4 per cent. above that for which they are marked, and at which the candle power and current measurements were made."**

**The Weston Arc Light Ammeter**

Is cheap, but nevertheless reliable and very accurate.

The scale is so proportioned that a change of $\frac{1}{10}$ of one ampere can be seen from a considerable distance. The instrument is absolutely "dead beat." Three different ranges are being made:

| | | | | | |
|---|---|---|---|---|---|
| No. 1. | 5.8 | 6.8 | 7.8 | amperes in $\frac{1}{10}$ | ampere div. |
| No. 2. | 8.6 | 9.6 | 10.6 | " " $\frac{1}{10}$ | " " |
| No. 3. | 9.5 | 10.5 | 11.5 | " " $\frac{1}{10}$ | " " |

Weston Arc Light Ammeter. Mention the WESTERN ELECTRICIAN when writing for catalogues.

**Best Boilers.**

Our Boiler Shop is equipped for making large boilers in two sheets as shown in the cut. No seams in fire, no laps to catch scale and mud; bottoms smooth and easily cleaned.

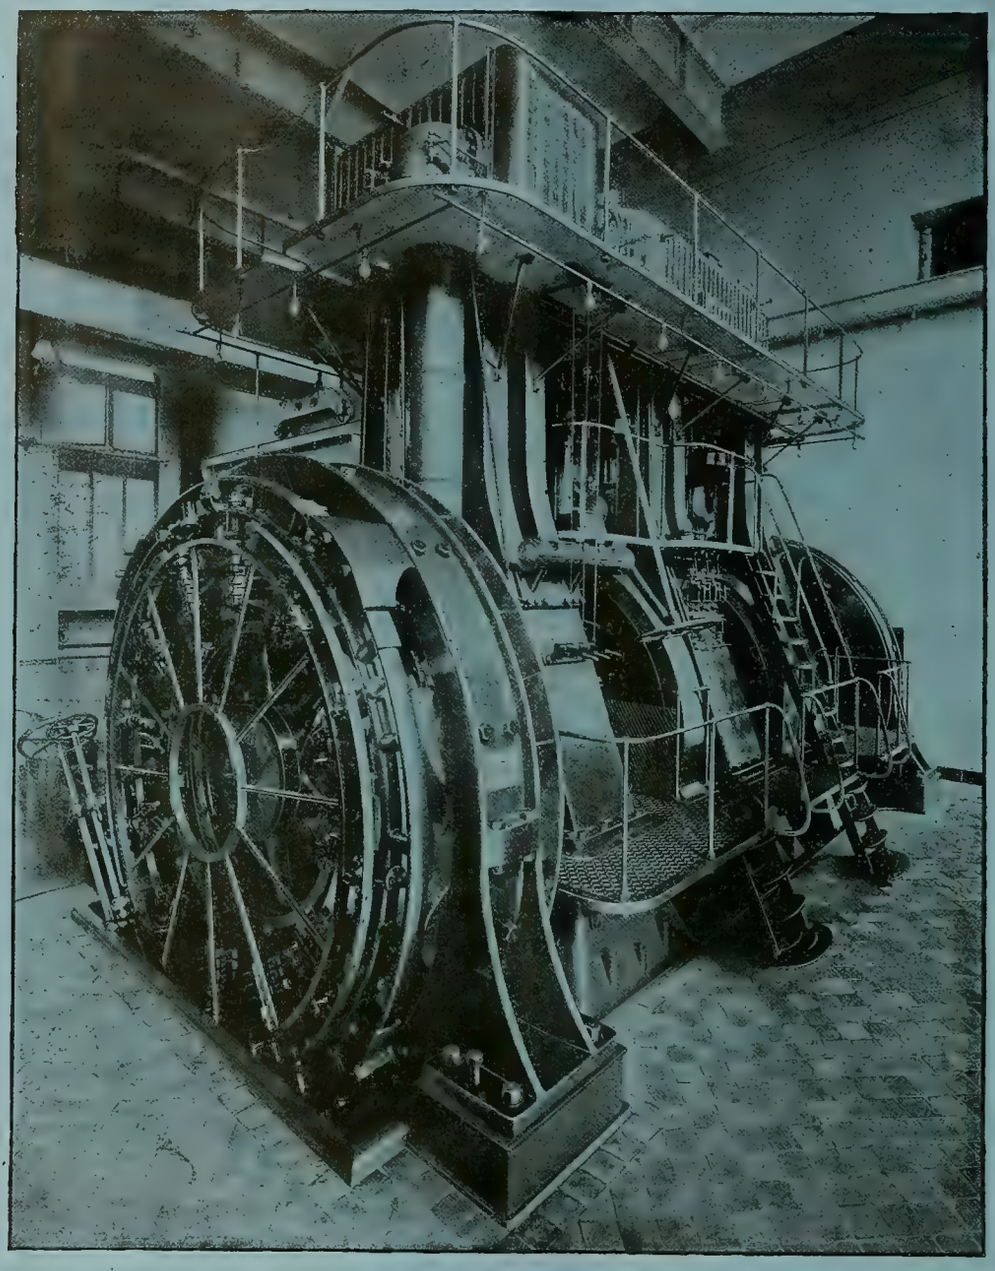
# GENERATORS

## For Central Stations and Isolated Plants.



**Two 400 K. W. Generators in Edison Electric Illuminating Co.'s Station, Brooklyn, N. Y. Direct-Connected to a Triple Expansion Vertical Engine.**

Our Generators are constructed to meet the most stringent requirements of electric lighting practice. In design and workmanship their superiority is acknowledged. The frames and pole pieces are of cast steel; the armature windings of copper bars, and the insulation of the best obtainable and most carefully applied. Thorough ventilation of the armature is provided. The commutator and brushes are perfect in their operation under all conditions of load, and the machines are practically sparkless. The largest electric lighting stations in the world are using Direct-Connected Generators of our make, while the smaller sized machines will be found in the majority of modern isolated plants.

**GENERAL WESTERN AGENTS.**

Write us for Revised Price List.

# SOLID CARBONS.

## ARC LAMPS!!

**For Incandescent Circuits. For Direct Current.**
**For Alternating Current. For Railway Circuits.**
**Focusing, Twin and Series Lamps.**
**All new lamps, all in perfect order and ready for use.**

## CARBONS!!

**High Class Foreign and Domestic.**
**Cored Carbons, Tested Carbons.**
**Siemens & Halske, Lacombe, Hardtmuth, Ship Cored, National, Fidelity, Solar and Globe Carbons.**
**These Standard Goods MUST BE SOLD to close an Estate. Write for particulars to**

**CHAS. H. WATERMAN,**
1305 Havemeyer Building,
26 Cortlandt Street, NEW YORK.

Sales Agent for { Wm. J. Hammer, John F. Randolph, } Assignees for Francis R. Upton.

## Gordon Primary Battery

EXCELS IN

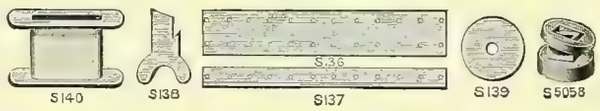
Long Life, Efficiency,
Economy, Adaptability.
It is Absolutely Non Freezing,
Labor Saving,
Free from Local Action,
Freedom from Gases and Odors.
Superior Generation of Energy.

These Batteries are in use by the most prominent Telephone, Fire Alarm and Railroad Companies of America.
Send for descriptive circular and price list.
We guarantee all our Cells.

MANUFACTURED BY

**The Gordon-Burnham Battery Co.,**
**82 West Broadway, New York.**

## VULCABESTON CONTROLLER PARTS.



## All Controllers are Insulated with Vulcabeston.

*G. E. 800 and Westinghouse Commutator Rings,*
*Brush Holder Bushings and Field Spools.*

**SEND FOR PRICE LIST.**

Moulded Mica Trolley Insulating Materials, Frogs, Crossings, Tree Insulators, Weatherproof Sockets, etc.

**H. W. JOHNS MFG. CO.,**
**240-242 Randolph St., Chicago, Ill.**

Gen. Elec. Co. NEW YORK. PHILADELPHIA. BOSTON. Westinghouse.

# THE UPTON ARC LAMP

**For All Circuits.**

**The Cheapest to Buy, Use and Maintain.**

## Standard Thermometer Co.,

PEABODY, MASS.

The Original Manufacturers of the

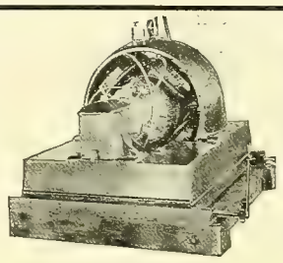
*SIMPLEX, WARD and KNIGHT LAMPS.*

CHARLES A. BRAMHALL, Sel'ing Agent, 39 Cortlandt Street, NEW YORK.

# CARD

Generators for Power Transmission or Isolated Lighting.
CARD Generators are all Multipolar and Slow Speed.

**AGENTS WANTED IN UNOCCUPIED TERRITORY.**



75 K. W. GENERATOR.

# CARD

Multipolar Slow Speed Stationary Motors.
Reversible Motors and Controllers for Rolling Mills, Bridges and Traveling Cranes.

**THE CARD ELECTRIC COMPANY,**
**Office and Works, Mansfield, Ohio.**

THE PIONEER FIRM.
American Branch Office, 60 Liberty St., New York.

## F. HARDTMUTH & CO., VIENNA, AUSTRIA,

THE ONLY MANUFACTURERS OF

THE PIONEER FIRM.
Beware of Impostors Claiming our Make.

# "The Celebrated Austrian Cored Carbons."

Send for Reduced Price Lists or Samples.
Alternating or Direct Cored Carbons One Price.

Special Quotations for Export Trade.
Leading Supply Houses Carry our Goods.

## Electric Railway Supplies.

The more a man uses the better grades of electrical merchandise **the easier** he finds it to accomplish satisfactory results.

The better the material the greater the satisfaction. The customer is content because he realizes, in the contemplation of good work, that he has received his money's worth.

You are content because you know you have done your whole duty.

Two of the greatest factors in good work are **Okonite Wire** and **Interior Conduit.**

OKONITE IT NEVER DISAPPOINTS

**Central Electric Company,**

**CHICAGO.**

——BRANCHES——

ST. LOUIS: Southern Electrical Supply Co.

NEW ORLEANS: 1010 Canal St.

BUFFALO: 112 White Bldg.

# The Days are Growing Dark===

## . . . YOU NEED MORE LIGHT.

---

## ARC LAMPS FOR ALL CIRCUITS.

The General Incandescent Arc Light Co.'s "BERGMANN" Lamps are the simplest and best manufactured lamp on the market.

We do not guarantee our lamps to do anything except to burn satisfactorily, but this we certainly do guarantee.

Each lamp is adapted to the circuit on which it is to burn and is so made as to give the best results on its intended circuit.

## NO OLD STOCK---NO JUNK.

Our "SUN-SCHMELZER-NURNBERG" carbons are the best imported carbons brought to this country.

If you want anything in the arc lamp or imported carbon line, WRITE TO ME.

**R. B. COREY, General Sales Agent,**

Havemeyer Building, NEW YORK.

---

# The "Electra" Carbons.

ELECTRA *TRADE MARK*

**IMPORTED**

**HIGH GRADE NUERNBERG CARBONS**

ELECTRA *TRADE MARK*

**FOR DIRECT CURRENT ARC LAMPS.** **FOR ALTERNATING CURRENT ARC LAMPS.**

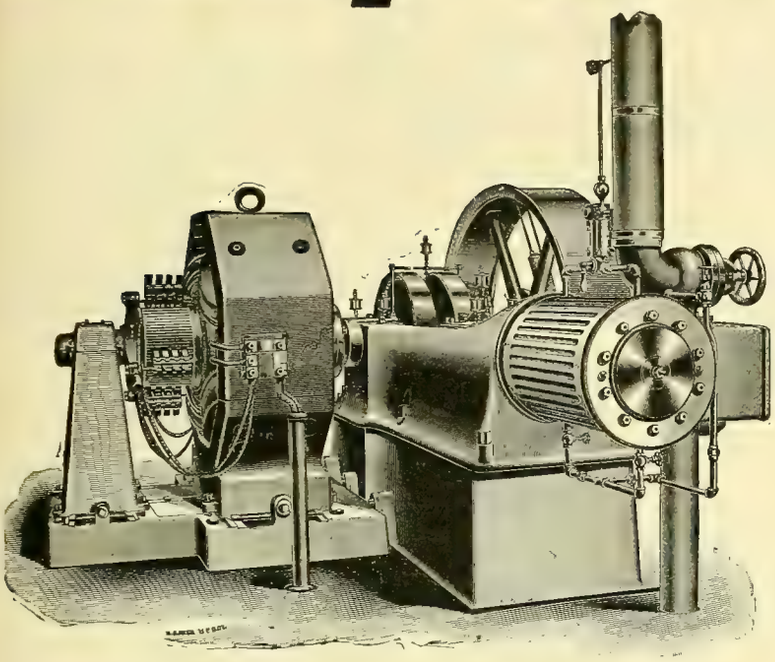
Are by far the most economical and efficient manufactured. They produce a very brilliant and absolutely steady light, burning without any dust.

SEND FOR LATEST PRICE LIST TO

**HUGO REISINGER,** NO. 38 BEAVER STREET, NEW YORK.

Sole Importer for the United States and Canada.

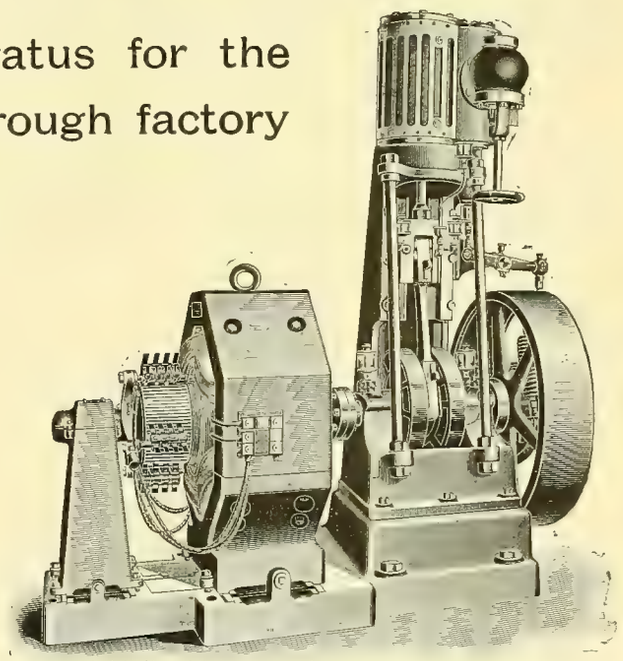
# Eddy Generators



DIRECT CONNECTED OR BELTED
FOR
ELECTRIC RAILWAYS,
CENTRAL STATIONS,
ISOLATED LIGHTING
OR
POWER PLANTS.

## EDDY MOTORS—SLOW, MEDIUM OR HIGH SPEED.

We build all necessary apparatus for the transmission of Electrical Power through factory or other buildings.



## All Our Apparatus Guaranteed As Represented.

## SALE BY TENDER.

THE Brantford Electric & Power Company (Limited) offer for sale by tender, the Brantford Canal Level and Electric Lighting and Power Plant.

Sealed tenders marked "Tenders for the Assets of the B. E & P. Co. Ltd." will be received by the undersigned up to twelve o'clock noon on the 26th day of November now next, for the purchase of the property of the Brantford Electric & Power Company, Ltd., consisting of lands, new dam, new head gates, buildings, engine and boilers, arc and incandescent dynamos, power generator, pole lines, electrical supplies and Company's franchises, etc.

Also the magnificent water power known as "The Grand River Level." Full water power, which can be developed at the Company's Power House at the Brantford Locks with a fall of some thirty-three feet is in the neighborhood of seven hundred and fifty horse power, and might be very largely increased. Only some three hundred and fifty horse power is now in use.

In addition to the foregoing, the Company own a large quantity of lands within the city limits and the vicinity thereof. The Company have under contract now some 2,400 incandescent lights of 16 candle power each; power contracts to the extent of seventy-five horse power; some fifty arc lights, the major portion of which are used for lighting the public streets of the city. The incandescent lights are used altogether in public buildings, hotels, etc. Contracts for private lighting not yet having been entered into.

The business is well established, but is capable of far greater development in every department. The gross income of the Company is now over fourteen thousand dollars per annum, $14,000.

Any further information connected with the Company's property will be furnished when required. This furnishes a rare opportunity for investors to acquire one of the most valuable water power privileges in Ontario and the business connected therewith.

Terms of sale and other full particulars may be had on application to the undersigned Secretary-Treasurer at the chief office of the Company, No. 80 Market street, Brantford, and at the office of the undersigned Solicitors of the Company, Court House, Brantford.

The highest or any tender not necessarily accepted.

WILSON & WATTS, Solicitors for Company.
JOHN McGEARY, Sec.-Treasurer.
Brantford, 4th November, 1895.

EXCELLENT FACILITIES OFFERED EAST BOUND TRAVELERS.

The Nickel Plate road now offers greater facilities to the traveling public than ever. The improved service in all its departments, including powerful locomotives, promptness as to time, comfortable coaches, nicely decorated, richly upholstered and easy riding; dining cars in which the welfare of the inner man is carefully looked after and satisfied; Wagner palace buffet sleeping cars and substantial stations. These added to the fact of its being the shortest line between Chicago and Buffalo via Fort Wayne, Fostoria, Cleveland and Erie, with through sleeping cars from Chicago to New York and Boston via the West Shore and Fitchburg railroads, all combine to make the popular low rate line between Chicago and any point east and south. Further information as to rates, time of trains, etc., can be procured from J. Y. CALAHAN, general agent, 111 Adams street, Chicago, Ill. Depot Twelfth and Clark streets.

# A BOOMERANG.

A Kokomo concern which has falsely advertised itself as the only "Genuine Hunnings" telephone makers, and which has misrepresented that the so-called "Hunnings" telephones are "patented in England and America," has further falsely represented that the Western apparatus at Altoona was for sale by it, and made further falsehood that it was "installing 400 telephones at Altoona, etc." Telegrams and letters and advertising of a libelous character were sent out by this Kokomo concern. We simply submit the Altoona Co.'s letter:

**Altoona Phœnix Telephone Company,**
OFFICE: ROOMS 14 AND 15, PHŒNIX BLOCK.

H. PRICE GRAFFIUS, PRESIDENT. A. V. DIVELY, TREASURER.
JOHN M. HAMER, GEN'L MANAGER. WILLARD P. BEARDSLEY, SECRETARY.

WESTERN TELEPHONE CONSTRUCTION COMPANY,
Chicago, Ills.;

Altoona, Pa., Nov. 4th, '95.

GMNTLEMEN:--

We are in receipt of your recent favor concerning the offering for sale by the American Electric Telephone Company, of Kokomo, Indiana, of the apparatus of your Company used by us, and in reply thereto please note:

The American Electric Telephone Company did not purchase from us the apparatus furnished by you and they had no authority whatever to offer the same for sale.

We had some difficulty with our line from this city to Hollidaysburg which parallels an Electric Street railway for about five miles, and which the American Electric Telephone Company claimed to be in the switchboard and agreed to remedy the same.

Upon the arrival, however, of your Mr. Stitch, and his going over the matter with our General Manager, he has made the wrong right, and our lines and telephones are now working satisfactory.

Very Respectfully Yours,
ALTOONA PHOENIX TELEPHONE COMPANY,
Per H. PRICE GRAFFIUS, Prest.

---

This Kokomo concern is distressed because we have been called upon to displace the poor apparatus furnished by it in a number of places, (write Armour & Co., Chicago; Cambria Iron Works, Johnstown, and elsewhere) and has resorted to the methods mentioned to offset its unsavory record.

The Western Telephone Construction Co. is a responsible and reliable institution. Its apparatus is too well known to need further statement than that it will endeavor to continue to keep it far in advance of competitors and now ***Guarantees it to be Superior,*** as to Switchboards and Telephones, to any purchasable in the United States.

---

# THE TELEPHONE HAND-BOOK

**BY HERBERT LAWS WEBB.**

*Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."*

146 Pages, 138 Illustrations, Cloth, Hand-Book Size, Price $1.00.

EXTRACT FROM PREFACE.

"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and THE TELEPHONE HAND BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that any one can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS.

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: its Use in the Telephone Transmitter.

THE ONLY
# Reflector Plate Alternating Arc Lamp.

**The Helios Electric Company claims:**

That they have more alternating arc lamps in use than all other makes combined.

They guarantee 80 per cent. more available light than is obtained from any other alternating arc lamp.

They guarantee to give as much light as any direct current lamp using the same number of watts.

## Spencer's Improved Alternating Arc Lamp

**Possesses the following advantages:**

Minimum choke in the regulating coil.
Practically no energy absorbed in the regulating device.
Durability of all its parts; not liable to get out of order.
Can be used successfully on all periods.
Starts quickly.

## Spencer's Direct Current Constant Potential Lamp.

**Guaranteed not to see-saw.**

**TESTIMONIALS.**

We submit among hundreds of others the following testimonials, and call attention to the fact that they are from expert electricians, managers of exchanges and superintendents of railroad telegraph.

"A whisper is distinctly heard. We pronounce the Standard perfect." STEELE CO. (N. D.) TEL. CO.

"We talked to Rowell, 75 miles, through storm induction. Have discarded the Bell for Standard." PECOS IRRIGATION & IMP. CO., Eddy, New Mexico.

"Have used Cushman, Harrison and Bell, but consider the Standard far superior." C. A. ROOD, Reedsburg, Wis.

"I should recommend Standard to our people, as against any other with which I am familiar. The test we gave was between St. Paul and Dickinson, 559 miles." O. C. GREENE, Supt. Telg. Northern Pacific Ry.

"Your instruments are working very nicely and every one exceedingly pleased with them. You will have all the business you can do." HOME TELEPHONE CO., Sioux City, Iowa.

"The Standard when known will knock out inferior instuments," U. J. FRY, Supt. Tel. C., M & St. P. Ry.

"Better than any of the others we have." E. PENNINGTON, Supt. Tel. "Soo" Ry.

"Have given Standard extremely hard test where induction is heavy, with most satisfactory results. J. R. MICHAELS, Supt. Tel. St. Paul & Duluth Ry.

"The Standard will transmit a whisper or a shout with equal clearness." HUMPHREY JONES, Washington C. H., Ohio.

"Their efficiency and working is perfect. We shall use nothing but Standard." GALLAGHER BROS. Meridian, Miss.

# The S. K. C. Two Phase Alternating Current System.

THE FIRST AND ONLY COMPLETE AND PERFECTED SYSTEM BY WHICH LIGHT AND POWER CAN BE SUPPLIED FROM THE SAME GENERATOR AND CIRCUITS. POWER TRANSMISSION AND DISTRIBUTION MADE PRACTICAL AND COMMERCIALLY SUCCESSFUL.

## POINTS OF SUPERIORITY:

Our system is much more simple and consequently more durable than any other, either direct or alternating.

Our generator is much more efficient than any other alternator, requires less attention and absolutely no supplies except lubricant for bearings.

It is practically self-regulating without the loss of energy involved by compounding or compensating. Other multi-phase machines require a balance of load.

We have entirely eliminated from our generators the usual sources of trouble, expense and interruption of service: i. e., the revolving armature, commutator, collector rings, brushes, etc.

They can be built for any voltage from 110 for isolated lighting to the high voltages required for power transmission work; in latter case doing away with the expense and loss of step-up transformers; the usual central station machine can be connected at will for either 1,000 or 2,000 volts.

The motors excel in simplicity of construction; in starting torque and simplicity of starting device; in efficiency in the manner in which they take current in proportion to their load, and in uniformity of speed under different conditions of load.

Our transformers insure satisfactory service and the grea'est economy. We are prepared to fill all orders promptly, and carry a full stock of transformers in Chicago.

**Patents**—Our apparatus is novel, different from anything heretofore made, and covered by patents that fully protect us and our customers. We are not infringing patents belonging to others, and shall avail ourselves of the patents under which we operate to protect ourselves from piracy by other manufacturers.

# Progress the Order of the Age.

## THE NEW AMERICAN LEADS.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickman, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

**Test of a 45-inch Wheel—July 9, 1894.**

## CALIFORNIA EXCURSIONS.

**PERSONALLY CONDUCTED.**

Leave Chicago via the Burlington Route (C. B. & Q. R. R.) every Wednesday at 6.35 p. m. Route via Denver, Denver & Rio Grande Ry. (the scenic line) and Salt Lake City. These excursions are accompanied by an experienced agent, of the Burlington Route, thoroughly familiar with California. The latest model of Pullman tourist sleeping cars are used. They are fitted with every comfort; carpets, upholstered seats, mattresses, pillows, bed linen, toilet rooms, etc. They lack onlysome of the expensive finish of the Pullmans run on the limited express trains, while the cost per berth is only about one-third. Ask your nearest ticket agent for particulars and descriptive folders, or write to T. A. Grady, Manager Burlington Route Excursion Bureau, 211 Clark Street Chicago, Ill.

---

# Going to California.

The Burlington Route is the only railway running "Personally Conducted" Excursions via Denver to Colorado Springs, Salt Lake, Ogden, Sacramento, San Francisco, Stockton, Merced, Fresno, Bakersfield, and Los Angeles at the lowest rates and without change of cars.

Leave Chicago every Wednesday. Write or call on T. A. Grady, Excursion Manager, 211 Clark Street, Chicago

These are not results from "manufacturers' tests," but are from the regular tests of a large central station, the lamps being taken at random from a shipment of 2,000. The letter accompanying the above states: "The lamps were burned during the test at a voltage about 2 per cent. to 4 per cent. above that for which they are marked, and at which the candle power and current measurements were made."

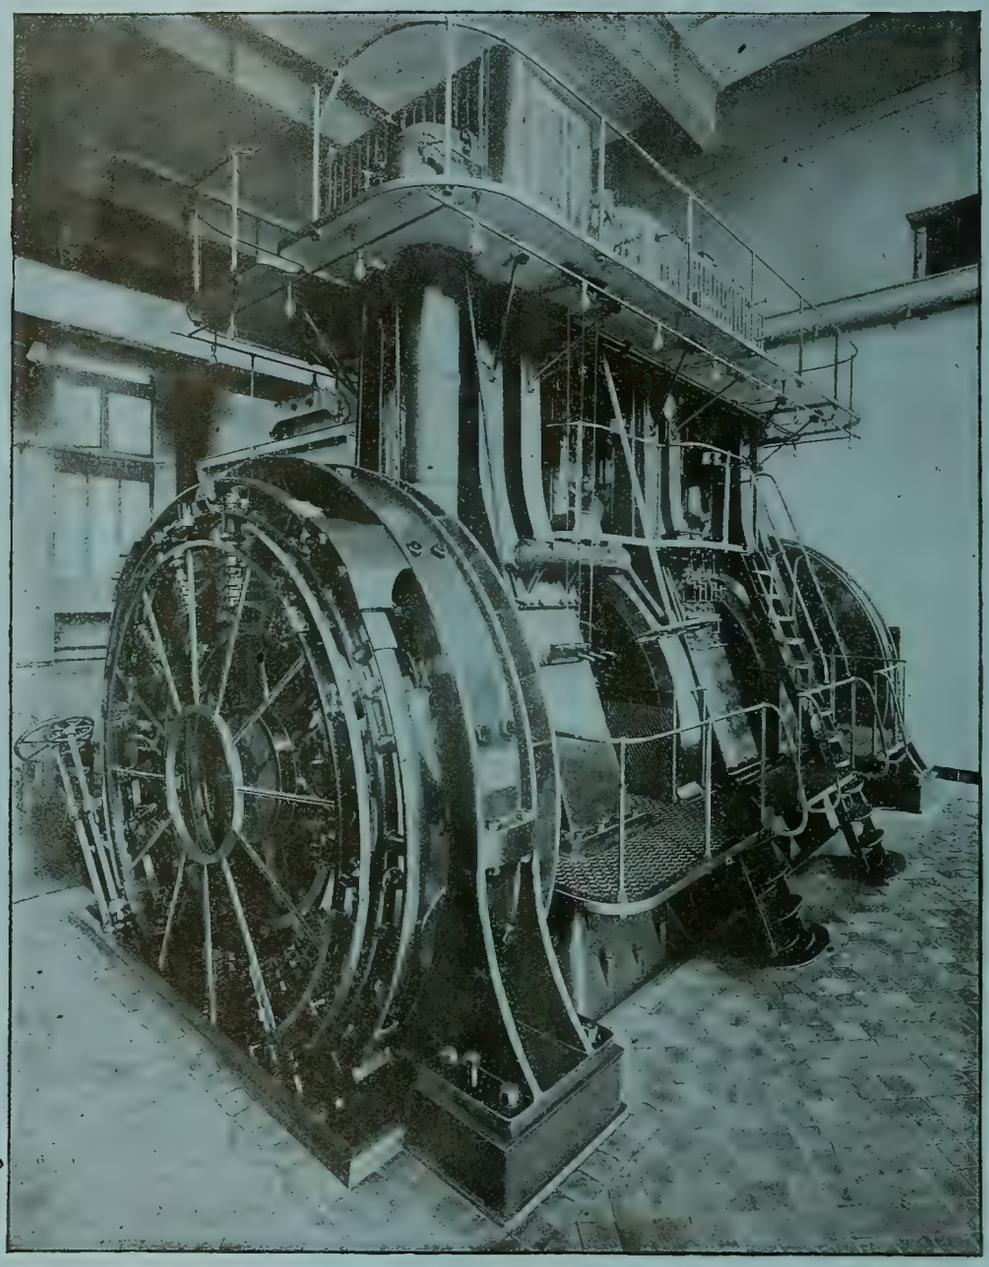
DIRECT-CONNECTED

# GENERATORS

## For Central Stations and Isolated Plants.



**Two 400 K. W. Generators in Edison Electric Illuminating Co.'s Station, Brooklyn, N. Y. Direct-Connected to a Triple Expansion Vertical Engine.**

Our Generators are constructed to meet the most stringent requirements of electric lighting practice. In design and workmanship their superiority is acknowledged. The frames and pole pieces are of cast steel; the armature windings of copper bars, and the insulation of the best obtainable and most carefully applied. Thorough ventilation of the armature is provided. The commutator and brushes are perfect in their operation under all conditions of load, and the machines are practically sparkless. The largest electric lighting stations in the world are using Direct-Connected Generators of our make, while the smaller sized machines will be found in the majority of modern isolated plants.

OKONITE
IT NEVER DISAPPOINTS

Ask a leather man 'what is the greatest thing?' and he will answer 'there is nothing like leather.'

Ask any man, who uses insulated wire the same question and he will tell you *'there is nothing like Okonite."*

No matter what his bias or predilection, if he is true to his convictions, the answer will be "Okonite."

And the other 'greatest thing' is *Interior Conduit.*

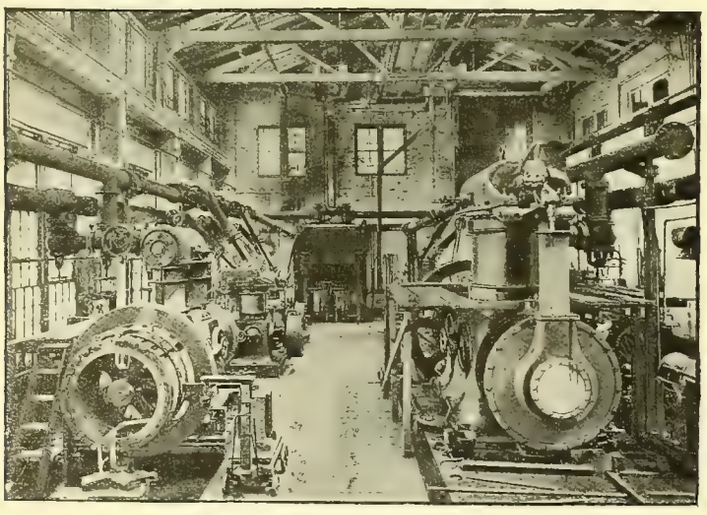
# Something About Westinghouse Engines.



....TESTING....

Every Westinghouse Engine, from the five horse-power Junior to the seven hundred horse-power Compound, is tested under full load before shipment. Ample facilities for testing the larger sizes of engines will be provided in our new shops, now approaching completion. Our present testing room has accommodations for nine engines at once. The piping is arranged so that the exhaust from any one engine can be turned into a surface condenser, condensed and weighed. The engines are loaded by means of a Prony Friction Brake. Every engine carries its full load from two to four days.

We make running tests on all Junior and Standard engines and economy tests on two engines taken at random from every shop order. We make a careful test of the steam consumption of every Compound engine we build. Reports of these tests with sample indicator cards are on file for every Compound engine ever built by us. This means that when you buy a Westinghouse engine you may be sure it is in perfect running order, its adjustments correct, its internal friction not excessive, and its steam consumption well within the limits of good economy. Further, it means that when we make a guarantee as to the economical performance of our engines, it is not a "bluff," but a fact which may be verified by our records, or by a test which the purchaser is free to make in our shops under the supervision of his own expert, and for which we will gladly furnish every facility. In this respect the Westinghouse Machine Company has no imitators. We cordially invite the most critical inspection of our product and methods of manufacture. Our shops are open at all times to engineers and others interested in steam power. If this subject is of interest we will send you a little circular which explains it more fully.

## Reflector Plate Alternating Arc Lamp.

**The Helios Electric Company claims:**

That they have more alternating arc lamps in use than all other makes combined.

They guarantee 80 per cent. more available light than is obtained from any other alternating arc lamp.

They guarantee to give as much light as any direct current lamp using the same number of watts.

## Spencer's Improved Alternating Arc Lamp

**Possesses the following advantages:**

Minimum choke in the regulating coil.
Practically no energy absorbed in the regulating device.
Durability of all its parts; not liable to get out of order.
Can be used successfully on all periods.
Starts quickly.

## Spencer's Direct Current Constant Potential Lamp.

**Guaranteed not to see-saw.**

QUALITY UNEQUALED.

FACTORY PRODUCTION TRIPLED.

INCANDESCENT LAMPS

Monadnock Building, Chicago. THE BUCKEYE ELECTRIC CO., Cleveland, O.

# "COIN" NOT "IN IT"

With our school of practical and applied electricity. We hope you have profited by the two previous examples:

Example No 1.—"O. K." weatherproof versus cheap line wire.
Example No. 2.—The Packard Transformer versus the "Nondescript."

## EXAMPLE NUMBER III.

You have seen lamp manufacturers advertise their lamp week after week and month after month, at a price several cents below the market, and you have wondered why they did not get all of the lamp business, or so much of it that they would not want to continue to advertise. Perhaps you have ordered some of the lamps yourself, and then you have ceased to wonder, and you have come to the conclusion that it is because there is only yourself with a few other "suckers" in the electrical business, but not very many more, and they are rapidly growing less.

Pay a few cents more, if necessary, for the **PACKARD**, and get a lamp that worth four times as much as the one which is good only as bait for "suckers," nd not very good for that.

THE

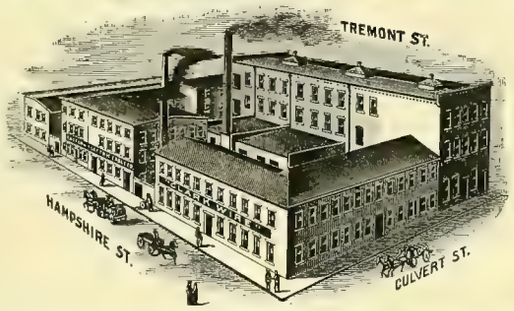
# "CLARK" WIRE.

TRADE MARK.

For Switchboard, Railway and Motor use, we make all sizes of Stranded and Flexible Wire and Cables with Clark's Insulation.

The Clark Wire has been before the public and in use for the past nine years, and has met with universal favor. Thousands of miles of this wire have been sold, and are in use throughout the United States and Foreign Countries, and the demand for it is constantly increasing, because it always gives perfect satisfaction.

BRANCH OFFICE:
1649, 1650, 1651 MONADNOCK BLDG.,
CHICAGO, ILLINOIS.



In a Letter from the Inspector of the Boston Fire Underwriters' Union, he states: "A Thoroughly Reliable and Desirable Wire in every respect."

The Rubber used in insulating our Wires and Cables is especially chemically prepared, and will not deteriorate, oxidize or crack, and will remain flexible in extreme cold weather, and is not affected by heat.

We guarantee our Insulation wherever used, Aerial, Underground or Submarine, and our net prices are as low, if not lower, than any other first-class Insulated Wire.

We shall be pleased to mail Catalogues with Terms and Discounts for Quantities.

A first-class traveling salesman to handle Dynamos and Motors. One who can take an interest preferred. Address with terms and references,

"F," care WESTERN ELECTRICIAN.

## POSITION WANTED.

As superintendent of lighting and power station by a practical and experienced central station man, having been in charge of the different departments, and understanding the leading systems for power, arc and incandescent lighting; also construction work and the economical management of steam plants. I will undertake to systematize the working of a plant and put upon an economical basis. First-class references from responsible lighting companies. Address

"Supt.," WESTERN ELECTRICIAN.

## WANTED—SITUATION.

By an energetic Engineer and Electrician of several years' experience, in electric light plant, west of Missouri River preferred. Please state full particulars as to size of plant, salary, etc. Will go to work immediately. References.

Address "A,"

Care of WESTERN ELECTRICIAN.

## FOR SALE.

### A No. 1 Electric Light Plant

At a bargain. In a growing town of 3,000 population, county seat of one of the best counties of Iowa, with three railroads, center of coal region. Coal delivered at furnace for 87½ cents per ton. Has been operated three years. Contract with city for street lighting has two years to run.

110 h. p. A. & S. Engine.
Two 60 h. p. Boilers.
1,500 Incandescent and about
40 Arc Lights, connected.

Address,

**B. S. Hood,**
Jerseyville, Ill.

## Second Hand Engines and Boilers for Sale.

Two 9½x10, double, 125 horse power, Armington & Sims.
One 15x20, 150 horse power, Ide.
One Boiler, 66 in. diameter and 16 ft. tubes.
Two 50-light Westinghouse Alternating Arc Machines with lamps. An excellent factory installation.

All in good order and condition. Only for sale on account of being replaced by larger units.

Also a lot of Dynamo pulleys; prices on receipt of dimensions.

Apply to

**N. B. Gas and Edison Light Co.,**
**New Bedford, Mass.**

*Illustrated with Twenty-two Diagrams.*

**By WILLIAM A. WITTBECKER.**

**Price in Paper, 25 Cents.**
**Price in Cloth, 50 Cents.**

THE growing demand for simple electrical apparatus in dwelling houses, offices and workshops, and the need of plain instructions whereby any person without a previous knowledge of electricity may be enabled to undertake their successful installation, has prompted the publication of this little book. It is not intended for the amateur who seeks for nothing but experimental work, neither is it expected to enlighten the expert electrician; but to the person who is seeking for information that will assist him in increasing his daily earnings this little volume is addressed.

The information given is above all else practical, and with a close observance of the directions laid down anyone without the slightest knowledge of electricity should be able to do the work described.

### FINE TRAIN TO CLEVELAND AND THE EAST.

Passengers east from Chicago should bear in mind the through fast express over the Nickel Plate road from Chicago daily at 1:30 p. m.; runs entire train through to New York City, with elegant sleeping cars to New York and Boston, arrives at Cleveland at 11:30 p. m. This train is supplied with colored porters in uniform to attend to the wants of both first and second class passengers. The night express leaves daily at 9:20 p. m. with through sleeping cars to New York and Boston. The lowest rates are given on all trains to all points east. For additional information as to time tables, tickets, etc., call on or address J. Y. CALAHAN, general agent, 111 Adams St., Chicago, Ill. Depot Twelfth and Clark streets. Memo. No. 97.

### EXCELLENT FACILITIES OFFERED EAST BOUND TRAVELERS.

The Nickel Plate road now offers greater facilities to the traveling public than ever. The improved service in all its departments, including powerful locomotives, promptness as to time, comfortable coaches, nicely decorated, richly upholstered and easy riding; dining cars in which the welfare of the inner man is carefully looked after and satisfied; Wagner palace buffet sleeping cars and substantial stations. These added to the fact of its being the shortest line between Chicago and Buffalo via Fort Wayne, Fostoria, Cleveland and Erie, with through sleeping cars from Chicago to New York and Boston via the West Shore and Fitchburg railroads, all combine to make the popular low rate line between Chicago and any point east and south. Further information as to rates, time of trains, etc., can be procured from J. Y. CALAHAN, general agent, 111 Adams street, Chicago, Ill. Depot Twelfth and Clark streets.

# A BOOMERANG.

**A Kokomo concern which has falsely advertised itself as the only "Genuine Hunnings" telephone makers, and which has misrepresented that the so-called "Hunnings" telephones are "patented in England and America," has further falsely represented that the Western apparatus at Altoona was for sale by it, and made further falsehood that it was "installing 400 telephones at Altoona, etc." Telegrams and letters and advertising of a libelous character were sent out by this Kokomo concern. We simply submit the Altoona Co.'s letter:**

**Altoona Phœnix Telephone Company,**
OFFICE: ROOMS 14 AND 15, PHŒNIX BLOCK.

H. PRICE GRAFFIUS, PRESIDENT. JOHN M. HAMER, GEN'L MANAGER.
A. V. DIVELY, TREASURER. WILLARD P. BEARDSLEY, SECRETARY.

WESTERN TELEPHONE CONSTRUCTION COMPANY,
Chicago, Ills.;

Altoona, Pa., Nov. 4th, '95.

GMNTLEMEN:--

We are in receipt of your recent favor concerning the offering for sale by the American Electric Telephone Company, of Kokomo, Indiana, of the apparatus of your Company used by us, and in reply thereto please note:

The American Electric Telephone Company did not purchase from us the apparatus furnished by you and they had no authority whatever to offer the same for sale.

We had some difficulty with our line from this city to Hollidaysburg which parallels an Electric Street railway for about five miles, and which the American Electric Telephone Company claimed to be in the switchboard and agreed to remedy the same.

Upon the arrival, however, of your Mr. Stitch, and his going over the matter with our General Manager, he has made the wrong right, and our lines and telephones are now working satisfactory.

Very Respectfully Yours, ALTOONA PHOENIX TELEPHONE COMPANY,
Per H. PRICE GRAFFIUS, Prest.

This Kokomo concern is distressed because we have been called upon to displace the poor apparatus furnished by it in a number of places, (write Armour & Co., Chicago; Cambria Iron Works, Johnstown, and elsewhere) and has resorted to the methods mentioned to offset its unsavory record.

The Western Telephone Construction Co. is a responsible and reliable institution. Its apparatus is too well known to need further statement than that it will endeavor to continue to keep it far in advance of competitors and now ***Guarantees it to be Superior,*** as to Switchboards and Telephones, to any purchasable in the United States.

**CAUTION:** So-called "Hunnings" telephones are almost duplicates of the telephone transmitter rejected by the Government at the recent tests, when "Western" apparatus was adopted. The patent office members of the committee reported on these "Hunnings" telephones: "Upon examination, however, it was discovered that a patent owned by the American Bell Telephone Co. issued to Emil Berliner in 1886, contained claims which specifically cover this instrument."

The same concern that made these "Hunnings" telephones and "blow" about expired patents, also furnished an Arm-Rest Switch, and recently an injunction was granted against the manufacturers of this arm-rest switch.

"Imitation (of Bell Patents) may prove of the sincerest flattery," but the reason telephone Exchange purchasers pay us twice the price and remove other apparatus, is because our apparatus is ***safe*** and ***high-class.***

**WHY ARE OTHER PEOPLE AFRAID TO PUBLISH A LIST OF EXCHANGE TELEPHONES?**

# WESTERN TELEPHONE CONSTRUCTION COMPANY,

**250 S. CLINTON ST., CHICAGO, ILL.**

# THE TELEPHONE HAND-BOOK

**BY HERBERT LAWS WEBB.**

*Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."*

146 Pages, 138 Illustrations, Cloth, Hand-Book Size, Price $1.00.

EXTRACT FROM PREFACE.

"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and THE TELEPHONE HAND BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that any one can understand and learn from i everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS.

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magnet Telephones.
9. The Bell Telephone Receiver
10 Other Forms of Magnet Telephones.
11. The Gower, Ader and D'Arsonval Receivers, Mercadier's Bi-Telephone.
12. The Siemens, Kotyra, Neumayer and Böttcher Receivers.
13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The Solid-back Transmitter.
17. The Berliner Transmitter.
18. The Cuttriss Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries.
25. Magneto Bells.
26. Automatic Switches.
27. Telephone Line Construction.
28. Metallic Circuits.
29. Underground Wires.
30. Lightning Arresters.
31. Inside Wiring.
32. Installation of Telephone Instruments.
33. Inspection and Maintenance.
34. The Condenser: its Use in Telephony.
35. Electromagnetic Retardation.
36. Exchange Working.
37. Small Exchanges.
38. Party Lines: The Bridging Bell.
39. Long Distance Telephony.
40. Duplex Telephony.
41. Simultaneous Telegraphy and Telephony.
Appendix.

## AMERICAN ELECTRIC TELEPHONE COMPANY,

**Kokomo, Ind , U. S. A.**

***IMITATION IS THE SINCEREST FLATTERY.***

Do not experiment with your money on imitations of our "Hunnings" Transmitter, being sold by pirates under the name of "Hunning" "type" and "Improved" (?). All these imitations require some form of agitator to keep their imperfect powder in condition, which tends to grind their granulated Carbon into fine dust or throw the transmitter into different adjustments, thus ruining their efficiency.

**CAUTION.**

***We are the only company who have proven by the test of time (nearly two years) our Transmitters will not pack.*** We own our o wn Carbon Works in the Natural Gas District; we are able to supply the only perfect granulated Carbon. The recent imitations are only experimental.

**CAUTION.**

Do you know several of the largest (?) Telephone manufacturers have recently had suits brought against them for infringements of the well-known Watson patent as well as on several important switch-board patents? We frown on such pirates. Buy your apparatus from Kokomo and be safe.

## American Electric Telephone Company,

**TESTIMONIALS.**

We submit among hundreds of others the following testimonials, and call attention to the fact that they are from expert electricians, managers of exchanges and superintendents of railroad telegraph.

"A whisper is distintly heard. We pronounce the Standard perfect." STEELE CO. (N. D.) TEL. CO.

"We talked to Bowell, 75 miles, through storm induction. Have discarded the Bell for Standard." PECOS IRRIGATION & IMP. CO., Eddy, New Mexico.

"Have used Cushman, Harrison and Bell, but consider the Standard far superior." C. A. ROOD, Reedsburg, Wis.

"I should recommend Standard to our people, as against any other with which I am familiar. The test we gave was between St. Paul and Dickinson, 559 miles." O. C. GREENE, Supt. Telg. Northern Pacific Ry.

"Your instruments are working very nicely and every one exceedingly pleased with them. You will have all the business you can do." HOME TELEPHONE CO., Sioux City, Iowa.

"The Standard when known will knock out inferior instuments." U. J. FRY, Supt. Tel. C., M. & St. P. Ry.

"Better than any of the others we have." E. PENNINGTON, Supt. Tel. "Soo" Ry.

"Have given Standard extremely hard test where induction is heavy, with most satisfactory results. J. R. MICHAELS, Supt. Tel. St. Paul & Duluth Ry.

"The Standard will transmit a whisper or a shout with equal clearness." HUMPHREY JONES, Washington C. H., Ohio.

"Their efficiency and working is perfect. We shall use nothing but Standard." GALLAGHER BROS. Meridian, Miss.

## THE NEW AMERICAN LEADS.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Stickman, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

## CALIFORNIA EXCURSIONS.

**PERSONALLY CONDUCTED.**

Leave Chicago via the Burlington Route (C. B. & Q. R. R.) every Wednesday at 6.35 p. m. Route via Denver, Denver & Rio Grande Ry. (the scenic line) and Salt Lake City. These excursions are accompanied by an experienced agent, of the Burlington Route, thoroughly familiar with California. The latest model of Pullman tourist sleeping cars are used. They are fitted with every comfort; carpets, upholstered seats, mattresses, pillows, bed linen, toilet rooms, etc. They lack onlysome of the expensive finish of the Pullmans run on the limited express trains, while the cost per berth is only about one-third. Ask your nearest ticket agent for particulars and descriptive folders, or write to T. A Grady, Manager Burlington Route Excursion Bureau, 211 Clark Street Chicago, Ill.

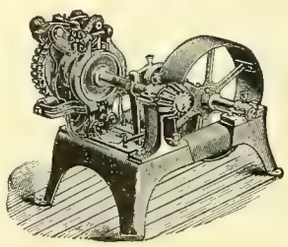
---

# Going to California.

The Burlington Route is the only railway running "Personally Conducted" Excursions via Denver to Colorado Springs, Salt Lake, Ogden, Sacramento, San Francisco, Stockton, Merced, Fresno, Bakersfield, and Los Angeles at the lowest rates and withont change of cars.

Leave Chicago every Wednesday. Write or call on T. A. Grady, Excursion Manager, 211 Clark Street, Chicago

---



# WATER POWER.

## GOVERNED FOR ELECTRICAL WORK.

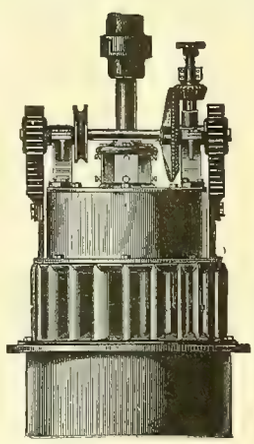
The limit of government of water-power is often determined by the design and construction of plant. Consult us if possible before completing your plans.

With **REPLOGLE'S COMPOUND REGULATORS** we are prepared to undertake and **guarantee** the government of water-power for all purposes, including **Electric Railway, Power and Lighting Plants.** We make and sell all of Replogle's Electrical and Mechanical Governors and other devices for the government of water-power. Expert advice furnished on application. If results of your present system are not satisfactory, write us. Address all inquiries to

**THE REPLOGLE GOVERNOR WORKS,**

MARK A. REPLOGLE, Chief Engineer. **AKRON, OHIO.**

---



# THE McCORMICK TURBINE,

**On Vertical or Horizontal Shaft, Especially Adapted for Electric Work.**

**Gives more power as to diameter with a higher percentage of useful effect than any other water-wheel heretofore made.** All sizes, right and left hand, are built from patterns perfected under systematic tests in the Holyoke Testing Flume.

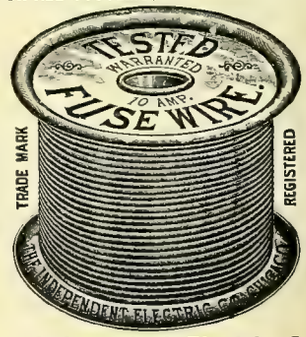
Parties having power plants which are unsatisfactory, and those contemplating the improvement of powers, will find it to their interest to confer with me, **as I am willing to guarantee results where others have failed, no matter what make of turbine has been in use. STATE REQUIREMENTS AND SEND FOR CATALOGUE.**

**S. MORGAN SMITH, York, Pa.**

**Estimates furnished for complete power plants and results guaranteed.**

---

**FUSE WIRE AND LINKS FOR ALL SYSTEMS,** } Correct Carrying Capacity. Absolutely Uniform.



WRITE US. TRADE MARK REGISTERED ALL SIZES IN STOCK.

**The Independent Electric Co.,**

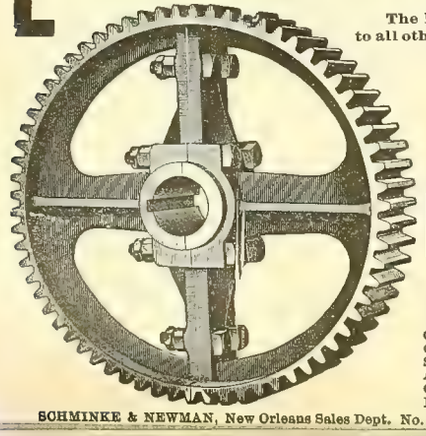
39th St. and Stewart Ave., Chicago.

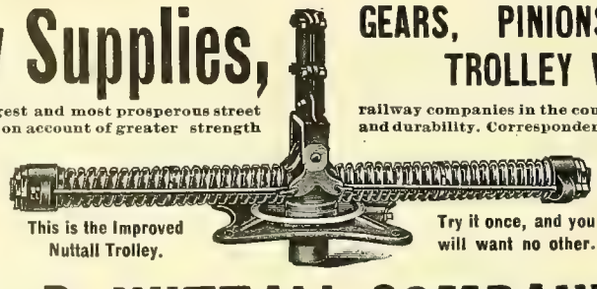
---

# Electric Railway Supplies,

**GEARS, PINIONS, BEARINGS, TROLLEYS, TROLLEY WHEELS AND HARPS.**

The largest and most prosperous street railway companies in the country are using our supplies, and they prefer them to all others on account of greater strength and durability. Correspondence Solicited.





This is the Improved Nuttall Trolley.

Try it once, and you will want no other.

These are not results from "manufacturers' tests," but are from the regular tests of a large central station, the lamps being taken at random from a shipment of 2,000. The letter accompanying the above states: **"The lamps were burned during the test at a voltage about 2 per cent. to 4 per cent. above that for which they are marked, and at which the candle power and current measurements were made."**

## character

the character of the man finds expression in numberless things other than his articulated thoughts.

Show us the man who is careless as to the material he buys, who thinks little of **quality** or **worth;** who sees only the present "good enough" and "get his money out of the job;" who cares naught for the stability of the future and we will show you a man who doesn't use **Okonite Wire** or **Interior Conduit.** They last too long to suit him; there is no chance for "repairs" or "general overhauling;" no snaps.

Once done with Okonite Wire and Interior Conduit, the job is done for all time. The bill is cheerfully paid and that's the end of it.

OKONITE — IT NEVER DISAPPOINTS

Interior Conduit

**Pharos Lamps**
Incandescent.

WE MANUFACTURE THE "GLOBE." LIFE AND EFFICIENCY GUARANTEED.

New Process of Exhaustion by Mechanical Vacuum Pump. Absolutely Dry Vacuum. Samples and Prices Furnished on Application. Correspondence Solicited.

## GLOBE ELECTRIC LIGHT CO., 6 Clifton St., ROXBURY, MASS.

AGENTS WANTED. WRITE US.

# The S. K. C. Two Phase Alternating Current System.

THE FIRST AND ONLY COMPLETE AND PERFECTED SYSTEM BY WHICH LIGHT AND POWER CAN BE SUPPLIED FROM THE SAME GENERATOR AND CIRCUITS. POWER TRANSMISSION AND DISTRIBUTION MADE PRACTICAL AND COMMERCIALLY SUCCESSFUL.

## POINTS OF SUPERIORITY:

Our system is much more simple and consequently more durable than any other, either direct or alternating.

Our generator is much more efficient than any other alternator, requires less attention and absolutely no supplies except lubricant for bearings.

It is practically self-regulating without the loss of energy involved by compounding or compensating. Other multi-phase machines require a balance of load.

We have entirely eliminated from our generators the usual sources of trouble, expense and interruption of service: i. e., the revolving armature, commutator, collector rings, brushes, etc.

They can be built for any voltage from 110 for isolated lighting to the high voltages required for power transmission work; in latter case doing away with the expense and loss of step-up transformers; the usual central station machine can be connected at will for either 1,000 or 2,000 volts.

The motors excel in simplicity of construction; in starting torque and simplicity of starting device; in efficiency in the manner in which they take current in proportion to their load, and in uniformity of speed under different conditions of load.

Our transformers insure satisfactory service and the greatest economy. We are prepared to fill all orders promptly, and carry a full stock of transformers in Chicago.

**Patents**—Our apparatus is novel, different from anything heretofore made, and covered by patents that fully protect us and our customers. We are not infringing patents belonging to others, and shall avail ourselves of the patents under which we operate to protect ourselves from piracy by other manufacturers.

## WANTED.

To interest the necessary capital to bring before the public my Automatic Safety Appliance for Electric Wires. It protects life from the most dangerous fallen wires carrying electric currents, and will be required by law.

**A. E. HUTCHINS, Detroit. Mich.**

## POSITION WANTED.

As superintendent of lighting and power station by a practical and experienced central station man, having been in charge of the different departments, and understanding the leading systems for power, arc and incandescent lighting; also construction work and the economical management of steam plants. I will undertake to systematize the working of a plant and put upon an economical basis. First-class references from responsible lighting companies. Address

"Supt." WESTERN ELECTRICIAN.

## WANTED—SITUATION.

By an energetic Engineer and Electrician of several years' experience, in electric light plant, west of Missouri River preferred. Please state full particulars as to size of plant, salary, etc. Will go to work immediately. References.

Address "A,"
Care of WESTERN ELECTRICIAN.

## WANTED.

A competent man to act as foreman of armature department. None but first-class men need apply. Give experience and class of work you have done. Apply

**CANADIAN GENERAL ELECTRIC CO.,**
**Peterboro, Ont.**

## WANTED.

Competent wireman, dynamo tender and central station man. Steady work for right man. Address, stating experience and references,

**TAGONA WATER & LIGHT CO.,**
**Sault Ste. Marie, Ontario.**

## POSITION WANTED.

First class all around telephone man of ten years' experience in construction and repairs. For the past two years have been with manufacturing company assembling and testing telephones and swit hboards Have had experience installing exchanges. Would contract to do all inside work, furnishing telephones switchboards, cables, etc, or make alterations on unsatisfactory exchanges. Address "C. O. R.,"

Care WESTERN ELECTRICIAN.

## FOR SALE.

Small lot of American Gas Engine Electric Co.'s stock; cheap. Address

"C. E. R.,"
Care of WESTERN ELECTRICIAN,
Chicago.

# Scrap Copper Wire WANTED.

It will pay the Electrical Plants to save their Scrap Copper Wire and ship to us in any quantity, at the following prices, f. o. b. Chicago, cash on receipt of same:

| | |
|---|---|
| Bare Copper Trolley Wire | 9 cts. per lb. |
| Ordinary Bare Copper Wire Scrap, | 8½ " " |
| Insulated Copper Wire | 5 to 8 " " |
| Heavy Red Scrap Brass | 7½ " " |
| Heavy Yellow Scrap Brass | 6¼ " " |
| Light Sheet Brass | 3¾ " " |

We receive metals in any quantity and send prompt returns. We also supply the Electrical trade with Cotton Waste, in bales of 100 and 500 lbs., also Babbitt, in lots of 100 lbs. and over, at the very lowest prices. It will pay you to correspond with us. Address

## GREAT REDUCTION IN TIME TO CALIFORNIA.

Once more the North-Western Line has reduced the time of its trans-continental trains, and the journey from Chicago to California via this popular route is now made in the marvelously short time of three days. Palace Drawing-Room Sleeping cars leave Chicago daily, and run through to San Francisco and Los Angeles without change, and all meals en route are served in Dining cars. Daily Tourist Sleeping car service is also maintained by this line between Chicago and San Francisco and Los Angeles, completely equipped berths in upholstered Tourist Sleepers being furnished at a cost of only $6 00 each from Chicago to the Pacific Coast. Through trains leave Chicago for California at 6 p. m. and 10:45 p. m. daily, after arrival of trains of connecting lines from the East and South.

For detailed information concerning rates, routes, etc, apply to ticket agents of connecting lines or address:

**W. B. KNISKERN,**

FOR THE BEGINNER AS WELL AS THE STUDENT.

Profusely Illustrated. Practical. Necessary Adjuncts to every Library. Send in your Orders.

**ELECTRICIAN PUBLISHING COMPANY, 6 Lakeside Bldg., Chicago.**

# KNOWLEDGE IS POWER.

Everyone engaged in the electrical business should keep posted on the developments in the art by reading the latest books on the subject. We are headquarters in the West for electrical books and can fill orders for any work published, promptly on receipt of price. We call your special attention to the following standard books:

**Allsop, F. C.**—Electrical Bell Construction; Treatise on the Construction of Electric Bells, Indicators, and similar apparatus. 177 illustrations.....$1.25

**Angell, J.**—Elements of Magnetism and Electricity, with Practical Instructions for the Performance of Experiments, and the construction of cheap apparatus. One hundredth thousand. 160 illustrations.....$1.00

**Atkinson, Philip.**—The Elements of Electric Lighting. Seventh edition, fully revised, and new matter added. 104 illustrations. 260 pages.....$1.50

**Atkinson, Philip.**—The Elements of Dynamic Electricity and Magnetism. 404 pages and 117 illustrations. Second edition.....$2.00

**Ayrton, W. E.**—Practical Electricity; a Laboratory and Lecture Course for First year Students of Electrical Engineering, based on the Practical Definitions of the Electrical Units. With numerous illustrations. Sixth edition.....$2.50

**Badt, Lieut. F. B.**—New Dynamo Tenders' Hand Book This is, as the name indicates, a **New Book**, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers, and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 226 pages, 140 illustrations, flexible cloth binding, size of type page 5½x3 inches.....$1.00

**Badt, Lieut. F. B.**—Incandescent Wiring Hand-book. A timely book containing full illustrations for incandescent wiring and complete information concerning methods of running wires, location of safety devices, splices, insulation, testing for faults, wire gauges, general electrical data, calculating sizes of wires, wiring fixtures, elevators, buildings, isolated and central station plants. The only book of the kind published. Type page 5½x3 inches, flexible cloth binding, 66 pages, 35 cuts and 5 tables, 3 of which are 12x18 inches.....$1.00

**Badt, Lieut. F. B.**—Bell Hangers' Hand-book. Just the book for people engaged in selling, installing or handling electric batteries, electric bells, elevators, house or hotel annunciators, burglar or fire alarms, electric gas lighting apparatus, electric heat apparatus. 106 pages, 97 illustrations, flexible cloth binding. Type page 5½x3 inches $1.00

**Badt, Lieut F. B.**—Electric Transmission Hand-book. First edition, three thousand copies. 97 pages, 22 illustrations, 27 original tables.....$1.00
Gives more *Practical* information on the subject than any work published to date. The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers and Motor Inspectors. With this book anybody may make estimates on the cost of Transmission Plants.

**Bedell, Fred'k and Albert C. Crehore.**—Alternating Currents; An Analytical and Graphical Treatment for Students and Engineers. Second edition. 112 illustrations.....$2.50

**Blakesley, T. H.**—Papers on Alternating Currents of Electricity for the use of Students and Engineers. Third edition, enlarged. 12mo, cloth.....$1.50

**Bonney, G. E.**—Electro-Plater's Hand Book. A Manual for Amateurs and Young Students on Electro-Metallurgy. 60 illustrations. 208 pages. 12mo, cloth.....$1.25

**Bottone, S. R.**—Electrical Instrument Making for Amateurs. A Practical Hand-book, with 48 illustrations. Fourth edition. Enlarged by a chapter on the Telephone.....$0.50

**Bottone, S. R.**—The Dynamo, How Made and How Used A Book for Amateurs. Eighth edition, with additional matter and 39 illustrations.....$1.00

**Bottone, S. R.**—Electro-Motors. How Made and How Used. A Handbook for Amateurs and Practical Men. Reduced to.....$0 50

**Bottone, S. R.**—How to Manage the Dynamo. A Hand-book for Ship Engineers, Electric Light Engineers and Electro-Platers.....$0.60

**Buckley, W. J.**—Electric Lighting Plants, their cost and operation. 275 pages, many illustrations and diagrams. Cloth.....$2.00
Paper..... 1.00

**Cox, Frank P.**—Continuous Current Dynamos and Motors. An Elementary Treatise for Students and Engineers. Illustrated.....$2 00

**Crocker, F. B., and Wheeler, S. S.**—The Practical Management of Dynamos and Motors. With a special chapter by H. A. Foster. Illustrated. Second edition, revised and enlarged.....$1.00

**Crosby, O. T., and Dr. Louis Bell.**—The Electric Railway in Theory and Practice. A Complete Treatise on the Construction and Operation of Electric Railways, Second edition, revised and enlarged. 183 illustrations.....$2.50

**Desmond, Chas.**—Electricity for Engineers. Part I. Constant Current A clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps Indicator and Measuring Instruments; also a full explanation of the electrical terms used in the work. Part II. Alternate Current Apparatus. Containing an explanation of the principles governing the generation of, and a description of the instruments and machinery used in connection with Alternate Electric Currents. Illustrated. Revised edition.....$2.50

**Dyer, A.**—Induction Coils. How Made and How Used. Third edition. Boards.....$0.50

**Fleming, J. A.**—Short Lectures to Electrical Artisans. A course of Experimental Lectures delivered to a Practical Audience. Fourth edition. 74 illustrations.....$1.50

**Fleming, J. A.**—The Alternate Current Transformer in Theory and Practice. Vol. I. The Induction of Electric Currents, 500 pages, fully illustrated and with copious index. Second edition.....$3.00
Synopsis of contents: Chapter 1. Introductory. 2. Electro-Magnetic Induction. 3. The Theory of Simple Periodic Currents. 4. Mutual and Self Induction. 5. Dynamical Theory of Current induction.
Vol. II. The Utilization of Induced Currents. 8vo. cloth. London, 1892.....$5.00

**Gore, G.**—The Art of Electro-Metallurgy, including all Known Processes of Electro Deposition. Fourth edition.....$2 00

**Gordon.**—School Electricity. Sources, Currents, Measurement, Telegraphy, Telephony, Lightning, Electrolysis, Induction, etc. 262 pages, with 140 illustrations.....$2.00

**Grier, Thos. G.**—Wiring for Motor Circuits. A handy little pamphlet containing tables for wiring and for motor service, arranged in convenient form for ready reference.$1.00

**Haskins, C. H.**—The Galvanometer and its Uses. A Manual for Electricians and Students. Fourth edition, revised..$1.50

**Haskins.**—Transformers. Their Theory, Construction and Application Simplified. 38 illustrations.....$1.25

**Hawkins, C. C. and F. Wallis.**—The Dynamo, its Theory, Design and Manufacture. 190 illustrations.....$3.00

**Hering.**—Practical Directions for Winding Magnets and Dynamos. 12mo, cloth, reprint without additions.....$1.25

**Hopkins, Geo. M.**—Experimental Science. Elementary, Practical and Experimental Physics, 650 Illustrations.$4 00

**Hopkinson.**—Original Papers on Dynamo Machinery and Allied Subjects. Illustrated.....$1.00

**Hopkinson, Dr. John.**—Dynamic Electricity; Its Modern Use and Measurement, chiefly in its Application to Electric Lighting and Telegraphy.....$0.50

**Hospitalier, E.**—Domestic Electricity for Amateurs, Translated from the French. With additions by C. J. Wharton. With illustrations.....$2 50

**Houston, Prof. E. J.**—A Dictionary of Electrical Words, Terms and Phrases. Third edition, re-written and greatly enlarged. Large 8vo. 562 pages, and 570 illustrations.....$5.00

**Kapp, Gisbert.**—Electric Transmission of Energy and its Transformation, Subdivison and Distribution. A practical handbook. Third edition.....$3.00

**Kapp, Gisbert.**—Alternate Current Machinery Illustrated.$0.50
[Vol. 96 Van Nostrand's Science Series.]

**Kapp, Gisbert.**—Alternating Currents of Electricity. Their Generation, Measurement, Distribution and Application. Authorized American ed. With an introduction by William Stanley, Jr. Illustrated.....$1.00

**Kapp, Gisbert.**—Dynamos, Alternators and Transformers. 138 illustrations.....$4.00

**Kempe, H. R.**—A Handbook of Electrical Testing. Fifth edition. 200 illustrations. 8vo. cloth. London, 1892....$7.25
In this edition there is a considerable amount of new matter; the old matter has been thoroughly revised.

**Kempe, H. R.**—The Electrical Engineer's Pocket Book. Modern Rules, Formulæ, Tables and Data. 32mo, leather.....$1.75

**Lockwood, T. D.**—Electricity, Magnetism and Electric Telegraphy. A Practical Guide and Handbook of General Information for Electrical Students, Operators and Inspectors. 376 pages, 152 Illustrations.....$2.50

**Lockwood, T. D.**—Electrical Measurement and the Galvanometer; its Construction and Use. Second edition... $1.50

**Lockwood, T. D.**—Practical Information for Telephonists. 12mo, cloth. N. Y.....$1 00

**Meadowcroft, W. H.**—The A. B. C. of Electricity. 36 Illustrations.....$0.50

**Martin, T. C.**—Inventions, Researches and Writings of Nikola Tesla. With special reference to his work in polyphase currents and high potential lighting. 500 pp. 300 Illustrations, second edition.....$4.00

**Martin, T. C. and Wetzler, J.**—The Electric Motor and its Applications. Third edition. With an Appendix on the Development of the Electric Motor since 1888. By Dr. L. Bell. 300 Illustrations.....$3.00

**Maver, and Davis, M. M.**—The Quadruplex. With Chapters on the Dynamo-Electric Machine in Relation to the Quadruplex. The Practical Working of the Duplex Telegraph Repeaters and the Wheatstone Automatic Telegraph. 63 illustrations.....$1.50

**McClure, J. B.**—Edison and his Inventions, with Full Explanations of the Telephone, Phonograph, Tasemeter, Electric Light and all his Principal Discoveries, etc..$1.00

**Niaudet, Alfred.**—Elementary Treatise on Electric Batteries. Translated from the French by L. M. Fishback. Illustrated.....$2.50

**Noll, Augustus.**—How to Wire Buildings. A manual of the art of interior wiring. Illustrated.....$1.50

**Pope, Franklin Leonard.**—Modern Practice of the Electric Telegraph. A technical Hand-book for Electricians, Managers and Operators. 185 illustrations. 14th edition, rewritten and enlarged.....$1.50

**Prindle, H. B.**—A Popular Treatise on the Electric Railway of to-day. Fully illustrated.....$0.25

**Russell, Stuart A.**—Electric Light Cables and Distribution of Electricity. 107 illustrations.....$2.25

**Salomons, Sir David.**—Electric Light Installations. Vol. 1. The Management of Accumulators. A Practical Handbook. 7th edition, revised and enlarged. With illustrations. 12 mo, cl. London, 1893.....$1.50

**Sloane, T. O'Conner.**—Electricity Simplified. The Practice and Theory of Electricity, including a Popular Review of the Theory of Electricity, with Analogies and Examples of its Practical Application in every-day life. Illustrated.....$1.00

**Sloane, T. O'Connor.**—The Standard Electrical Dictionary. A Popular Dictionary of Words and Terms used in the practice of Electrical Engineering, 350 illustrations.$3.00

**Sloane, T. O'Connor.**—Electric Toy Making for Amateurs, including Batteries, Magnets, Motors, Miscellaneous Toys.....$1 00

**Sloane, T. O'Connor.**—The Arithmetic of Electricity. A Manual of Electrical Calculations by Arithmetical Methods, including numerous rules, examples and tables in the field of practical electrical engineering and experimenting. Third edition, revised.....$1.00

**Tesla, Nikola.**—Experiments with Alternate Currents of High Potential and High Frequency. A lecture delivered before the Institution of Electrical Engineers, London. With a portrait and biographical sketch of the Author Illustrated.....$1 00

**Tesla, Nikola.**—Lectures on the Electro-Magnet. Illustrated,.....$1.00

**TESTIMONIALS.**

We submit among hundreds of others the following testimonials, and call attention to the fact that they are from expert electricians, managers of exchanges and superintendents of railroad telegraph.

"A whisper is distintly heard. We pronounce the Standard perfect." STEELE CO. (N. D.) TEL. CO.

"We talked to Rowell, 75 miles, through storm induction. Have discarded the Bell for Standard." PECOS IRRIGATION & IMP. CO., Eddy, New Mexico.

"Have used Cushman, Harrison and Bell, but consider the Standard far superior." C. A. ROOD, Reedsburg, Wis.

"I should recommend Standard to our people as against any other with which I am familiar. The test we gave was between St. Paul and Dickinson, 559 miles." O. C. GREENE, Supt. Telg. Northern Pacific Ry.

"Your instruments are working very nicely and every one exceedingly pleased with them. You will have all the business you can do." HOME TELEPHONE CO., Sioux City, Iowa.

"The Standard when known will knock out inferior instuments." U. J. FRY, Supt. Tel. C., M. & St. P. Ry.

"Better than any of the others we have." E. PENNINGTON, Supt. Tel. "Soo" Ry.

"Have given Standard extremely hard test where induction is heavy, with most satisfactory results. J. B. MICHAELS, Supt. Tel. St. Paul & Duluth Ry.

"The Standard will transmit a whisper or a shout with equal clearness." HUMPHREY JONES, Washington C. H., Ohio.

"Their efficiency and working is perfect. We shall use nothing but Standard." GALLAGHER BROS. Meridian, Miss.

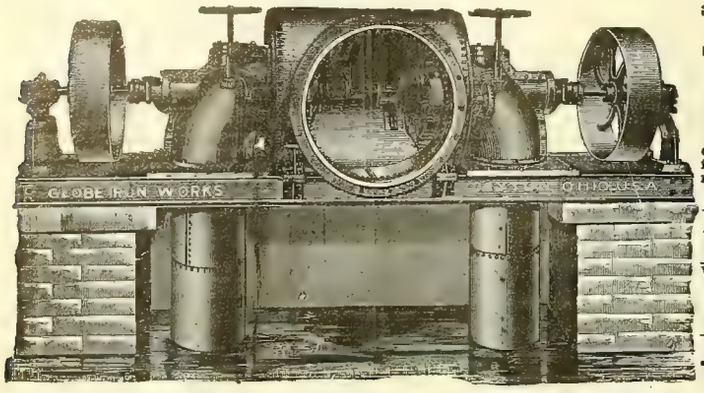
**6 Lakeside Building, CHICAGO.**



# Progress the Order of the Age.

## THE NEW AMERICAN LEADS.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Stockman, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

**Test of a 45-inch Wheel—July 9, 1894.**

| | Head. | Rev. per Min. | Cu. Ft. per Sec. | Horse Power. | P'r Cent |
|---|---|---|---|---|---|
| Whole Gate | 16.06 | 119.17 | 141.58 | 205.27 | 79.76 |
| ⅞ " | 16.42 | 122.00 | 127.18 | 195.19 | 82.55 |

## CALIFORNIA EXCURSIONS.

**PERSONALLY CONDUCTED.**

Leave Chicago via the Burlington Route (C. B. & Q. R. R.) every Wednesday at 6.35 p. m. Route via Denver, Denver & Rio Grande Ry. (the scenic line) and Salt Lake City. These excursions are accompanied by an experienced agent, of the Burlington Route, thoroughly familiar with California. The latest model of Pullman tourist sleeping cars are used. They are fitted with every comfort: carpets, upholstered seats, mattresses, pillows, bed linen, toilet rooms, etc. They lack onlysome of the expensive finish of the Pullmans run on the limited express trains, while the cost per berth is only about one-third. Ask your nearest ticket agent for particulars and descriptive folders, or write to T. A Grady, Manager Burlington Route Excursion Bureau, 211 Clark Street Chicago, Ill.

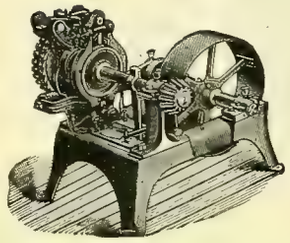
---

# Going to California.

The Burlington Route is the only railway running "Personally Conducted" Excursions via Denver to Colorado Springs, Salt Lake, Ogden, Sacramento, San Francisco, Stockton, Merced, Fresno, Bakersfield, and Los Angeles at the lowest rates and without change of cars.

Leave Chicago every Wednesday. Write or call on T. A. Grady, Excursion Manager, 211 Clark Street, Chicago

---



# WATER POWER.

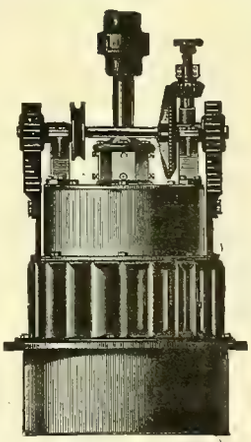
## GOVERNED FOR ELECTRICAL WORK.

The limit of government of water-power is often determined by the design and construction of plant. Consult us if possible before completing your plans.

With **REPLOGLE'S COMPOUND REGULATORS** we are prepared to undertake and **guarantee** the government of water-power for all purposes, including **Electric Railway, Power and Lighting Plants.** We make and sell all of Replogle's Electrical and Mechanical Governors and other devices for the government of water-power. Expert advice furnished on application. If results of your present system are not satisfactory, write us. Address all inquiries to

**THE REPLOGLE GOVERNOR WORKS,**
MARK A. REPLOGLE, Chief Engineer. **AKRON, OHIO.**

---



# THE McCORMICK TURBINE,

**On Vertical or Horizontal Shaft, Especially Adapted for Electric Work.**

**Gives more power as to diameter with a higher percentage of useful effect than any other water-wheel heretofore made.** All sizes, right and left hand, are built from patterns perfected under systematic tests in the Holyoke Testing Flume.

Parties having power plants which are unsatisfactory, and those contemplating the improvement of powers, will find it to their interest to confer with me, **as I am willing to guarantee results where others have failed, no matter what make of turbine has been in use. STATE REQUIREMENTS AND SEND FOR CATALOGUE.**

**S. MORGAN SMITH, York, Pa.**

**Estimates furnished for complete power plants and results guaranteed.**

---

**FUSE WIRE AND LINKS FOR ALL SYSTEMS.** } Correct Carrying Capacity. Absolutely Uniform.

# THOMSON

# ALTERNATING CURRENT

# ARC LAMP.

THE ONLY ARC LAMP SUCCESSFULLY MEETING THE REQUIREMENTS OF ALTERNATING CURRENT ARC LIGHT SERVICE. . . . . .

**WHAT USERS SAY:**

"We have carefully tested your Alternating Arc Lamp and find it gives better satisfaction than any other arc lamp on our circuits."

"We are satisfied that it is very economical and efficient, and its simplicity of construction makes it very desirable to manage and manipulate."

"We have tried other makes of alternating arc lamps and have returned them to the makers, finding that the T. H. is the best on the market."

"I find that it has a steady feed with large variation in voltage."

POSSESSES ALL THE ADVANTAGES OF THE **BEST ARC LAMPS** OPERATED BY DIRECT CURRENT.

## THE MINIMUM OF ENERGY

Absorbed in the Regulating Mechanism.

## THE MAXIMUM OF LIGHT

Radiated from the Arc.

ALMOST NOISELESS.
SIMPLE AND COMPACT.
RELIABLE AND EFFICIENT.

FOR INDOOR
OR OUTDOOR USE.

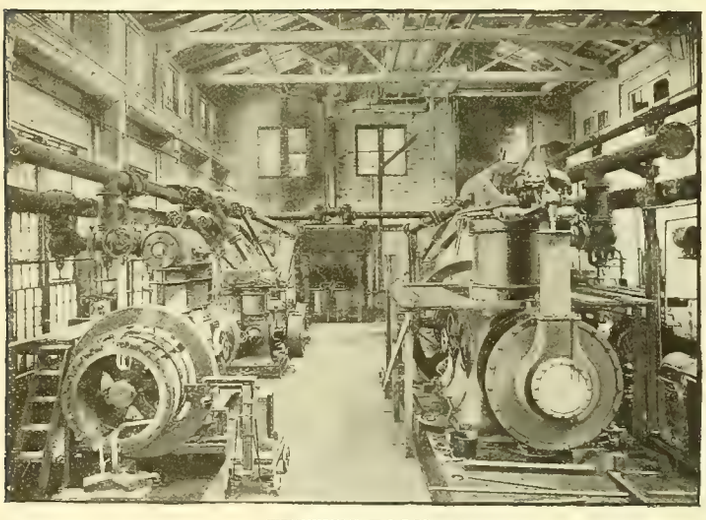
# Something About Westinghouse Engines.



TESTING ROOM.

....TESTING....

Every Westinghouse Engine, from the five horse-power Junior to the seven hundred horse-power Compound, is tested under full load before shipment. Ample facilities for testing the larger sizes of engines will be provided in our new shops, now approaching completion. Our present testing room has accommodations for nine engines at once. The piping is arranged so that the exhaust from any one engine can be turned into a surface condenser, condensed and weighed. The engines are loaded by means of a Prony Friction Brake. Every engine carries its full load from two to four days.

We make running tests on all Junior and Standard engines and economy tests on two engines taken at random from every shop order. We make a careful test of the steam consumption of every Compound engine we build. Reports of these tests with sample indicator cards are on file for every Compound engine ever built by us. This means that when you buy a Westinghouse engine you may be sure it is in perfect running order, its adjustments correct, its internal friction not excessive, and its steam consumption well within the limits of good economy. Further, it means that when we make a guarantee as to the economical performance of our engines, it is not a "bluff," but a fact which may be verified by our records, or by a test which the purchaser is free to make in our shops under the supervision of his own expert, and for which we will gladly furnish every facility. In this respect the Westinghouse Machine Company has no imitators. We cordially invite the most critical inspection of our product and methods of manufacture. Our shops are open at all times to engineers and others interested in steam power. If this subject is of interest we will send you a little circular which explains it more fully.

---

# THE CLASS GRADUATES.

It is hoped that thoroughly mastering the four preceding problems may result to our mutual advantage, and we will conclude with a review and one final problem.

## REVIEW.

Example I.—"O. K." weatherproof versus cheap line wire.
Example II.—The Packard Transformer versus the "Nondescript."
Example III.—The Packard Lamp versus the "advertised cheap" lamp.
Example IV.—Paranite Wire versus reclaimed rubber insulations(old rubber boots and shoes).

## FINAL EXAMPLE NUMBER V.

The serviceability of an Arc Lamp does not depend upon the extensiveness and intricacy of interior mechanism, nor yet upon the frills and furbelows of the exterior design. Some manufacturers depend upon one or both of these to sell their goods.

The Upton Arc Lamp is sold on the basis of its utility for the work for which it is made, the simplicity of its mechanism and its business-like appearance. Where we can get them in on trial we depend entirely on their readily apparent merit.

THE

# "CLARK" WIRE.

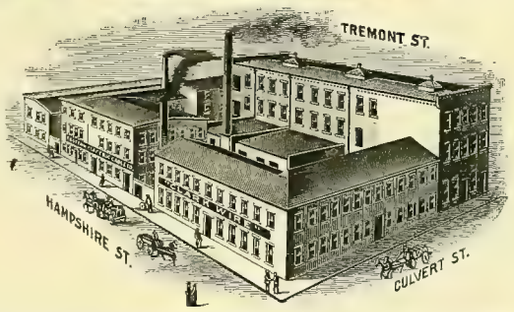
TRADE MARK.

For Switchboard, Railway and Motor use, we make all sizes of Stranded and Flexible Wire and Cables with Clark's Insulation.

The Clark Wire has been before the public and in use for the past nine years, and has met with universal favor. Thousands of miles of this wire have been sold, and are in use throughout the United States and Foreign Countries, and the demand for it is constantly increasing, because it always gives perfect satisfaction.

BRANCH OFFICE:

1649, 1650, 1651 MONADNOCK BLDG.,
CHICAGO, ILLINOIS.



In a Letter from the Inspector of the Boston Fire Underwriters' Union, he states: "A Thoroughly Reliable and Desirable Wire in every respect."

The Rubber used in insulating our Wires and Cables is especially chemically prepared, and will not deteriorate, oxidize or crack, and will remain flexible in extreme cold weather, and is not affected by heat.

We guarantee our Insulation wherever used, Aerial, Underground or Submarine, and our net prices are as low, if not lower, than any other first-class Insulated Wire.

We shall be pleased to mail Catalogues with Terms and Discounts for Quantities.

Of the City of Montreal, Canada, P. Q
In Liquidation.

The undersigned will sell by public auction, in three lots, at the office of Chas. Desmarteau, Liquidator, No. 1598 Notre-Dame St., Montreal, Canada, P. Q., on

*Thursday, the 19th of December 1895, at eleven o'clock in the forenoon,*

All the immovable properties and movable assets of the said company, consisting of:

1. All those tracts and parcels of land situated in St. Jean Baptiste Ward, in the City of Montreal, Province of Quebec, Dominion of Canada, described as follows:

*A.* The northeasterly parts of lots numbers 32 (thirty-two), 33 (thirty-three) and 34 (thirty-four), according to the official subdivision of lot number 10 (ten), of the official cadastre, of the village of St. Jean Baptiste, comprising an area of 4,970 (four thousand nine hundred and seventy) feet, more or less; and bounded toward the northeast by Montana Street, toward the southeast by Rachel Street, toward the northwest by lot number thirty-five of said official subdivision of said lot number ten, and toward the southwest by the remaining parts of said lots numbers thirty-two, thirty-three and thirty-four of said official subdivision of said lot number ten, with buildings and dependencies thereon erected.

*B.* Lots numbers 35 (thirty-five), 36 (thirty-six), 37 (thirty-seven), 38 (thirty-eight), 39 (thirty-nine), 40 (forty), 41 (forty-one) and 42 (forty-two) of said official subdivision of said lot number 10 (ten), comprising an area of 17,296 (seventeen thousand two hundred and ninety-six) feet, more or less; bounded toward the northeast by Montana Street, toward the southwest by lot number sixty-one (*a*) of said subdivision of lot number ten, toward the northwest by lot number forty-three, and toward the southeast by lot number thirty-four of said subdivision of said lot number ten, together with the right of passage in common with adjoining proprietors in the lane at the rear of said lots.

*C.* All engines, boilers, dynamos, tank (15 000 gallons), machinery, belting, shafts and general plant used for manufacturing and generating electricity, as well as the wires and posts, transmitters, meters, lamps etc., used for distributing and furnishing electric light to the citizens of Montreal and suburbs; the material and stock used for repairing the lines of the company, the whole amounting as per inventory to one hundred and forty-four thousand three hundred and seventy-one dollars ($144,371.00).

*D.* The franchise rights and privileges acquired by said company to plant poles in the streets of the City of Montreal.

2. The office furniture and fixtures, etc., amounting to $196 00.

3. The book debts amounting, as per list, to $3,456.00.

The purchaser of the immovable and dependencies described in paragraph 1 shall have to make a cash deposit of five thousand dollars currency ($5,000) at the time of adjudication.

The purchasers of movable assets described in paragraphs 2 and 3 shall have to make a cash deposit of ten per cent. at the time of adjudication.

## GREAT REDUCTION IN TIME TO CALIFORNIA.

Once more the North-Western Line has reduced the time of its trans-continental trains, and the journey from Chicago to California via this popular route is now made in the marvelously short time of three days. Palace Drawing-Room Sleeping cars leave Chicago daily, and run through to San Francisco and Los Angeles without change, and all meals en route are served in Dining cars. Daily Tourist Sleeping car service is also maintained by this line between Chicago and San Francisco and Los Angeles, completely equipped berths in upholstered Tourist Sleepers being furnished at a cost of only $6 00 each from Chicago to the Pacific Coast. Through trains leave Chicago for California at 6 p. m and 10:45 p. m. daily, after arrival of trains of connecting lines from the East and South.

For detailed information concerning rates, routes, etc, apply to ticket agents of connecting lines or address:

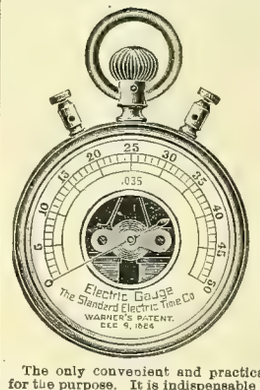
## THE ELECTRIC GAUGE.

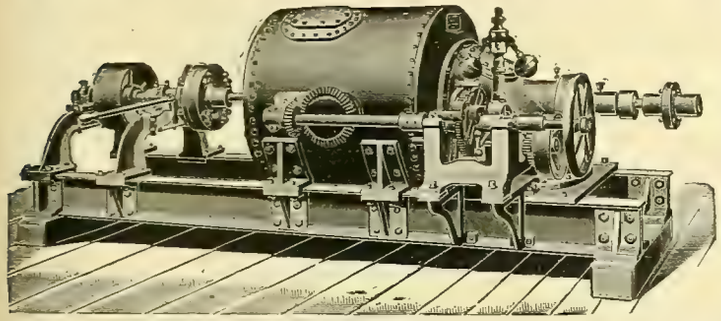


For Testing Batteries and the Strength of Battery Currents.

The only convenient and practical instrument for the purpose. It is indispensable to those using batteries and having the care of them. The Pocket Gauge is the size of an ordinary watch, and is very convenient for the use of linemen, inspectors, etc. Price, $8.00. Call for WARNER'S PATENT ELECTRIC GAUGE. Manufactured only by

The Standard Electric Time Co., Waterbury, Conn.

# VICTOR TURBINE WATER WHEEL.



Cylinder or Register Gate—Close Regulation and High Efficiency at Full and Partial Gate.

The attention of ELECTRIC COMPANIES is called to this **CELEBRATED WATER WHEEL** as particularly adapted to their use, on account of its **remarkably steady motion, high speed and great efficiency and large capacity** for its **diameter**, being **double the power** of most wheels of the same diameter. It is used by a number of the leading electric companies with great satisfaction. In the economical use of water it is without an equal, producing the highest per cent of useful effect **guaranteed.**

***SEND FOR CATALOGUE AND PARTICULARS.***

The accompanying engraving represents a single 10-inch Victor Turbine on horizontal shaft to develop 36 H. P. under 38 feet head. Arranged with 12-inch Worrell Friction Coupling at one end to disconnect pulley.

We are now prepared to furnish Victor Turbines, either single or in pairs, on horizontal shafts, and where the situation admits of their use we recommend them.

## DOMESTIC ELECTRICAL WORK.

Concise and Practical Explanations for Plumbers, Tinners and Hardware Dealers on How to Wire Buildings for Bells, Alarms, Annunciators, and for Gas Lighting from Batteries.

*Illustrated with Twenty-two Diagrams.*

By WILLIAM A. WITTBECKER.

**Price in Paper, 25 Cents.**
**Price in Cloth, 50 Cents.**

THE growing demand for simple electrical apparatus in dwelling houses, offices and workshops, and the need of plain instructions whereby any person without a previous knowledge of electricity may be enabled to undertake their successful installation, has prompted the publication of this little book. It is not intended for the amateur who seeks for nothing but experimental work, neither is it expected to enlighten the expert electrician; but to the person who is seeking for information that will assist him in increasing his daily earnings this little volume is addressed.

The information given is above all else practical, and with a close observance of the directions laid down anyone without the slightest knowledge of electricity should be able to do the work described

# An Excellent Series of Electrical Books.

BY T. O'CONNOR SLOANE.

FOR THE BEGINNER AS WELL AS THE STUDENT.

Profusely Illustrated. Practical. Necessary Adjuncts to every Library. Send in your Orders.

**ELECTRICIAN PUBLISHING COMPANY, 6 Lakeside Bldg., Chicago.**

# KNOWLEDGE IS POWER.

Everyone engaged in the electrical business should keep posted on the developments in the art by reading the latest books on the subject. We are headquarters in the West for electrical books and can fill orders for any work published, promptly on receipt of price. We call your special attention to the following standard books:

**Allsop, F. C.** Electrical Bell Construction; Treatise on the Construction of Electric Bells, Indicators, and similar apparatus. 177 illustrations.....$1.25

**Angell, J.**—Elements of Magnetism and Electricity, with Practical Instructions for the Performance of Experiments, and the construction of cheap apparatus. One hundredth thousand. 160 illustrations.....$1.00

**Atkinson, Philip.** The Elements of Electric Lighting. Seventh edition, fully revised, and new matter added. 104 illustrations. 260 pages.....$1.50

**Atkinson, Philip.**—The Elements of Dynamic Electricity and Magnetism. 406 pages and 117 illustrations. Second edition.....$2.00

**Ayrton, W. E.**—Practical Electricity; a Laboratory and Lecture Course for First-year Students of Electrical Engineering, based on the Practical Definitions of the Electrical Units. With numerous illustrations. Sixth edition.....$2.50

**Badt, Lieut. F. B.**—New Dynamo Tenders' Hand Book. This is, as the name indicates, a **New Book**, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers, and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 226 pages, 140 illustrations, flexible cloth binding, size of type page 6½x3 inches.....$1.00

**Badt, Lieut. F. B.**—Incandescent Wiring Hand-book. A timely book containing full illustrations for incandescent wiring and complete information concerning methods of running wires, location of safety devices, splices, insulation, testing for faults, wire gauges, general electrical data, calculating sizes of wires, wiring fixtures, elevators, buildings, isolated and central station plants. The only book of the kind published. Type page 6½x3 inches, flexible cloth binding, 66 pages, 35 cuts and 5 tables, 3 of which are 12x18 inches.....$1.00

**Badt, Lieut. F. B.**—Bell Hangers' Hand-ook. Just the book for people engaged in selling, installing or handling electric batteries, electric bells, elevators, house or hotel annunciators, burglar or fire alarms, electric gas lighting apparatus, electric heat apparatus. 106 pages, 97 illustrations, flexible cloth binding. Type page 5½x3 inches.$1.00

**Badt, Lieut. F. B.**—Electric Transmission Hand-book. First edition, three thousand copies. 97 pages, 22 illustrations, 27 original tables.....$1.00
Gives more *Practical* information on the subject than any work published to date. The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers and Motor Inspectors. With this book anybody may make estimates on the cost of Transmission Plants.

**Bedell, Fred'k and Albert C. Crehore.**—Alternating Currents; An Analytical and Graphical Treatment for Students and Engineers. Second edition. 112 illustrations.....$2.50

**Blakesley, T. H.**—Papers on Alternating Currents of Electricity for the use of Students and Engineers. Third edition, enlarged. 12mo, cloth.....$1.50

**Bonney, G. E.**—Electro-Plater's Hand Book. A Manual for Amateurs and Young Students on Electro-Metallurgy. 60 illustrations. 208 pages. 12mo, cloth.....$1.25

**Bottone, S. R.**—Electrical Instrument Making for Amateurs A Practical Hand-book, with 48 illustrations. Fourth edition. Enlarged by a chapter on the Telephone.....$0.50

**Bottone, S. R.**—The Dynamo, How Made and How Used. A Book for Amateurs. Eighth edition, with additional matter and 39 illustrations.....$1.00

**Bottone, S. R.**—Electro-Motors. How Made and How Used. A Handbook for Amateurs and Practical Men. Reduced to .....$0 50

**Bottone, S. R.**—How to Manage the Dynamo. A Hand-book for Ship Engineers, Electric Light Engineers and Electro-Platers.....$0.60

**Buckley, W. J.**—Electric Lighting Plants, their cost and operation. 275 pages, many illustrations and diagrams.
Cloth.....$2.00
Paper.....1.00

**Cox, Frank P.**—Continuous Current Dynamos and Motors. An Elementary Treatise for Students and Engineers. Illustrated.....$2 00

**Crocker, F. B., and Wheeler, S. S.**—The Practical Management of Dynamos and Motors. With a special chapter by H. A. Foster. Illustrated. Second edition, revised and enlarged.....$1.00

**Crosby, O. T., and Dr. Louis Bell.**—The Electric Railway in Theory and Practice. A Complete Treatise on the Construction and Operation of Electric Railways, Second edition, revised and enlarged. 183 illustrations.....$2.50

**Desmond, Chas.**—Electricity for Engineers. Part I. Constant Current A clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps Indicator and Measuring Instruments; also a full explanation of the electrical terms used in the work. Part II. Alternate Current Apparatus. Containing an explanation of the principles governing the generation of, and a description of the instruments and machinery used in connection with Alternate Electric Currents. Illustrated. Revised edition.....$2.50

**Dyer, A.**—Induction Coils. How Made and How Used. Third edition. Boards.....$0.50

**Fleming, J. A.**—Short Lectures to Electrical Artisans. A course of Experimental Lectures delivered to a Practical Audience. Fourth edition. 74 illustrations.....$1.50

**Fleming, J. A.**—The Alternate Current Transformer in Theory and Practice. Vol. I. The Induction of Electric Currents, 500 pages, fully illustrated and with copious index. Second edition.....$3.00
Synopsis of contents: Chapter 1. Introductory. 2. Electro-Magnetic Induction. 3. The Theory of Simple Periodic Currents. 4. Mutual and Self Induction. 5. Dynamical Theory of Current induction.
Vol. II. The Utilization of Induced Currents. 8vo, cloth. London, 1892.....$5.00

**Gore, G.**—The Art of Electro-Metallurgy, including all Known Processes of Electro Deposition. Fourth edition.....$2 00

**Gordon.**—School Electricity. Sources, Currents, Measurement, Telegraphy, Telephony, Lightning, Electrolysis, Induction, etc. 262 pages, with 140 illustrations.....$2.00

**Grier, Thos. G.**—Wiring for Motor Circuits. A handy little pamphlet containing tables for wiring and for motor service, arranged in convenient form for ready reference.$1.00

**Haskins, C. H.**—The Galvanometer and its Uses. A Manual for Electricians and Students. Fourth edition, revised ..$1.50

**Haskins.**—Transformers. Their Theory, Construction and Application Simplified. 38 illustrations.....$1.25

**Hawkins, C. C. and F. Wallis.**—The Dynamo, its Theory, Design and Manufacture. 190 illustrations.....$3.00

**Hering.**—Practical Directions for Winding Magnets and Dynamos. 12mo. cloth, reprint without additions.....$1.25

**Hopkins, Geo. M.**—Experimental Science. Elementary, Practical and Experimental Physics, 650 Illustrations.$4.00

**Hopkinson.**—Original Papers on Dynamo Machinery and Allied Subjects. Illustrated.....$1.00

**Hopkinson, Dr. John.**—Dynamic Electricity; Its Modern Use and Measurement, chiefly in its Application to Electric Lighting and Telegraphy.....$0.50

**Hospitalier, E.**—Domestic Electricity for Amateurs, Translated from the French. With additions by C. J. Wharton. With illustrations.....$2 50

**Houston, Prof. E. J.**—A Dictionary of Electrical Words, Terms and Phrases. Third edition, re-written and greatly enlarged. Large 8vo. 562 pages, and 570 illustrations.....$5.00

**Kapp, Gisbert.**—Electric Transmission of Energy and its Transformation, Subdivison and Distribution. A practical handbook. Third edition.....$3.00

**Kapp, Gisbert.**—Alternate Current Machinery Illustrated.$0.50
[Vol. 96 Van Nostrand's Science Series.]

**Kapp, Gisbert.**—Alternating Currents of Electricity. Their Generation, Measurement, Distribution and Application. Authorized American ed. With an introduction by William Stanley, Jr. Illustrated.....$1.00

**Kapp, Gisbert.**—Dynamos, Alternators and Transformers. 138 illustrations.....$4.00

**Kempe, H. R.**—A Handbook of Electrical Testing. Fifth edition. 200 illustrations. 8vo. cloth. London, 1892.....$7.25
In this edition there is a considerable amount of new matter; the old matter has been thoroughly revised.

**Kempe, H. R.**—The Electrical Engineer's Pocket Book. Modern Rules, Formulæ, Tables and Data. 32mo, leather.....$1.75

**Lockwood, T. D.**—Electricity, Magnetism and Electric Telegraphy. A Practical Guide and Handbook of General Information for Electrical Students, Operators and Inspectors. 376 pages, 152 Illustrations.....$2.50

**Lockwood, T. D.**—Electrical Measurement and the Galvanometer; its Construction and Use. Second edition... $1.50

**Lockwood, T. D.**—Practical Information for Telephonists. 12mo, cloth. N. Y.....$1.00

**Meadowcroft, W. H.**—The A. B. C. of Electricity. 36 Illustrations.....$0.50

**Martin, T. C.**—Inventions, Researches and Writings of Nikola Tesla. With special reference to his work in polyphase currents and high potential lighting. 500 pp. 300 Illustrations, second edition.....$4.00

**Martin, T. C. and Wetzler, J.**—The Electric Motor and its Applications. Third edition. With an Appendix on the Development of the Electric Motor since 1888. By Dr. L. Bell. 300 Illustrations.....$3.00

**Maver, and Davis, M. M.**—The Quadruplex. With Chapters on the Dynamo-Electric Machine in Relation to the Quadruplex. The Practical Working of the Duplex Telegraph Repeaters and the Wheatstone Automatic Telegraph. 63 illustrations.....$1.50

**McClure, J. B.**—Edison and his Inventions, with Full Explanations of the Telephone, Phonograph, Tasemeter, Electric Light and all his Principal Discoveries, etc..$1.00

**Niaudet, Alfred.**—Elementary Treatise on Electric Batteries. Translated from the French by L. M. Fishback. Illustrated.....$2.50

**Noll, Augustus.**—How to Wire Buildings. A manual of the art of interior wiring. Illustrated.....$1.50

**Pope, Franklin Leonard.**—Modern Practice of the Electric Telegraph. A technical Hand-book for Electricians, Managers and Operators. 185 illustrations. 14th edition, rewritten and enlarged.....$1.50

**Prindle, H. B.**—A Popular Treatise on the Electric Railway of to-day. Fully illustrated.....$0.25

**Russell, Stuart A.**—Electric Light Cables and Distribution of Electricity. 107 illustrations.....$2.25

**Salomons, Sir David.**—Electric Light Installations. Vol. 1. The Management of Accumulators. A Practical Hand-book. 7th edition, revised and enlarged. With illustrations. 12 mo, cl. London, 1893.....$1.50

**Sloane, T. O'Conner.**—Electricity Simplified. The Practice and Theory of Electricity, including a Popular Review of the Theory of Electricity, with Analogies and Examples of its Practical Application in every-day life. Illustrated.....$1.00

**Sloane, T. O'Connor.**—The Standard Electrical Dictionary. A Popular Dictionary of Words and Terms used in the practice of Electrical Engineering, 350 illustrations.$3.00

**Sloane, T. O'Connor.**—Electric Toy Making for Amateurs, including Batteries, Magnets, Motors, Miscellaneous Toys.....$1.00

**Sloane, T. O'Connor.**—The Arithmetic of Electricity. A Manual of Electrical Calculations by Arithmetical Methods, including numerous rules, examples and tables in the field of practical electrical engineering and experimenting. Third edition, revised.....$1.00

**Tesla, Nikola.**—Experiments with Alternate Currents of High Potential and High Frequency. A lecture delivered before the Institution of Electrical Engineers, London. With a portrait and biographical sketch of the Author Illustrated.....$1 00

**Tesla, Nikola.**—Lectures on the Electro-Magnet. Illustrated, .....$1.00

**Thurston, Prof. R. H.**—Stationary Steam Engines, especially adapted to Electric Lighting Purposes. Treating of the development of Steam Engines, the Principles of Construction and Economy, with description of Moderate and High Speed Engines. With many folding plates.....$1.50

**Thomson, Prof. Elihu.**—What is Electricity? Illustrated.$0.25

**Thompson, Sylvanus P.**—Dynamo-Electric Machinery. A Series of Lectures, with an introduction by Franklin L. Pope. 16mo. Numerous illustrations, fancy boards (Van Nostrand's Science Series, No. 66).....$0.50

**Thompson, Sylvanus P.**—Polyphase Electric Currents and Alternate-Current Motors. Mailed to any address in the world on receipt of.....$3.50

**Thompson, Sylvanus P.**—Recent Progress in Dynamo-Electric Machines, being a Supplement to Dynamo-Electric Machinery. 16mo. (Van Nostrand's Science Series, No. 75).....$0.50

**Thompson, Sylvanus P.**—Dynamo-Electric Machinery. Fourth edition, revised and rewritten. Numerous illustrations and 29 plates. 1,000 pages.....$6 00

**Trevert.**—How to Make Electric Batteries at Home. Illustrated.....$0.25

**Urquhart.**—Electro-Plating. A Practical Hand-book on the Deposition of Copper, Silver, Nickel, Gold, Aluminum, Brass, Platinum, etc. Second edition; carefully revised, with additions.....$2.00

**Walker, F.**—Practical Dynamo Building, for Amateurs. How to wind for any output. With numerous illustrations. 16mo, boards. (Van Nostrand's Science Series, No. 98).$0.50

**Webb, H. L.**—A practical Guide to the Testing of Insulated Wires and Cables. Illustrated.....$1.00

**Webb, Herbert Laws.**—Telephone Hand-book, Illustrated. 12mo, cloth. Chicago, 1895.....$1.00
The only complete work on the Telephone. All possible information for any one interested in Telephones and how to make and operate them.

We submit among hundreds of others the following testimonials, and call attention to the fact that they are from expert electricians, managers of exchanges and superintendents of railroad telegraph.

"A whisper is distintly heard. We pronounce the Standard perfect." STEELE CO. (N. D.) TEL. CO.

"We talked to Rowell, 75 miles, through storm induction. Have discarded the Bell for Standard." PECOS IRRIGATION & IMP. CO., Eddy, New Mexico.

"Have used Cushman, Harrison and Bell, but consider the Standard far superior." C. A. ROOD, Reedsburg, Wis.

"I should recommend Standard to our people, as against any other with which I am familiar. The test we gave was between St. Paul and Dickinson, 559 miles." O. C. GREENE, Supt. Telg. Northern Pacific Ry.

"Your instruments are working very nicely and every one exceedingly pleased with them. You will have all the business you can do." HOME TELEPHONE CO., Sioux City, Iowa.

"The Standard when known will knock out inferior instuments." U. J. FRY, Supt. Tel. C., M. & St. P. Ry.

"Better than any of the others we have." E. PENNINGTON, Supt. Tel. "Soo" Ry.

"Have given Standard extremely hard test where induction is heavy, with most satisfactory results. J. R. MICHAELS, Supt. Tel. St. Paul & Duluth Ry.

"The Standard will transmit a whisper or a shout with equal clearness." HUMPHREY JONES, Washington C. H., Ohio.

"Their efficiency and working is perfect. We shall use nothing but Standard." GALLAGHER BROS. Meridian, Miss.

## THE NEW AMERICAN LEADS.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickman, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

**Test of a 45-inch Wheel—July 9, 1894.**

| | Head. | Rev. per Min. | Cu. Ft. per Sec. | Horse Power. | P'r Cent |

## CALIFORNIA EXCURSIONS.

**PERSONALLY CONDUCTED.**

Leave Chicago via the Burlington Route (C. B. & Q. R. R.) every Wednesday at 6.35 p. m. Route via Denver, Denver & Rio Grande Ry. (the scenic line) and Salt Lake City. These excursions are accompanied by an experienced agent, of the Burlington Route, thoroughly familiar with California. The latest model of Pullman tourist sleeping cars are used. They are fitted with every comfort; carpets, upholstered seats, mattresses, pillows, bed linen, toilet rooms, etc. They lack onlysome of the expensive finish of the Pullmans run on the limited express trains, while the cost per berth is only about one-third. Ask your nearest ticket agent for particulars and descriptive folders, or write to T. A. Grady, Manager Burlington Route Excursion Bureau, 211 Clark Street Chicago, Ill.

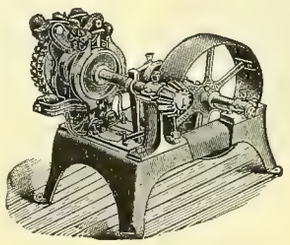
---

# Going to California.

The Burlington Route is the only railway running "Personally Conducted" Excursions via Denver to Colorado Springs, Salt Lake, Ogden, Sacramento, San Francisco, Stockton, Merced, Fresno, Bakersfield, and Los Angeles at the lowest rates and without change of cars.

Leave Chicago every Wednesday. Write or call on T. A. Grady, Excursion Manager, 211 Clark Street, Chicago.

---



# WATER POWER.

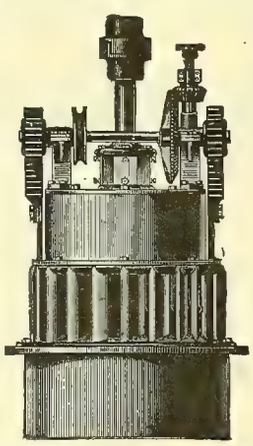
## GOVERNED FOR ELECTRICAL WORK.

The limit of government of water-power is often determined by the design and construction of plant. Consult us if possible before completing your plans.

With **REPLOGLE'S COMPOUND REGULATORS** we are prepared to undertake and **guarantee** the government of water-power for all purposes, including **Electric Railway, Power and Lighting Plants.** We make and sell all of Replogle's Electrical and Mechanical Governors and other devices for the government of water-power. Expert advice furnished on application. If results of your present system are not satisfactory, write us. Address all inquiries to

**THE REPLOGLE GOVERNOR WORKS,**
MARK A. REPLOGLE, Chief Engineer. **AKRON, OHIO.**

---



# THE McCORMICK TURBINE,

**On Vertical or Horizontal Shaft, Especially Adapted for Electric Work.**

**Gives more power as to diameter with a higher percentage of useful effect than any other water-wheel heretofore made.** All sizes, right and left hand, are built from patterns perfected under systematic tests in the Holyoke Testing Flume.

Parties having power plants which are unsatisfactory, and those contemplating the improvement of powers, will find it to their interest to confer with me, **as I am willing to guarantee results where others have failed, no matter what make of turbine has been in use. STATE REQUIREMENTS AND SEND FOR CATALOGUE.**

**S. MORGAN SMITH, York, Pa.**

**Estimates furnished for complete power plants and results guaranteed.**

# TRIUMPH

OF THE

# Tesla System.

That the **TESLA POLYPHASE SYSTEM,**

Operating Incandescent Lights, Arc Lamps, and the celebrated Tesla Motors, from the same circuits, is recognized to be the final solution of the problem of electrical distribution of power from Central Stations is evidenced by the fact that we are to-day selling

**POLYPHASE ALTERNATING CURRENT GENERATORS**

aggregating 3,000 H. P. for each 1,000 H. P. of Single-Phase Alternators.

# Notice Is Given

That induction motors operated by the so-called "Monocyclic" system, offered for sale by the General Electric Co., are, in fact, polyphase motors, and are broadly covered by the patents of Nikola Tesla, owned by the Westinghouse Electric & Manufacturing Co.

The motors and system of distribution advertised by the Stanley Electric Co., of Pittsfield, are also an infringement of the Tesla patents.

Suits have been brought against each of these companies, and are being pressed to a hearing as rapidly as possible.

It is the purpose of the Westinghouse Electric & Manufacturing Co. to bring suits against all users of apparatus infringing the Tesla Patents, in order that the rights of the Company may be enforced.

## SIEMENS & HALSKE ELECTRIC CO. OF AMERICA,

**Monadnock Block, - - CHICAGO.**

# The S. K. C. Two Phase Alternating Current System.

**THE FIRST AND ONLY COMPLETE AND PERFECTED SYSTEM BY WHICH LIGHT AND POWER CAN BE SUPPLIED FROM THE SAME GENERATOR AND CIRCUITS. POWER TRANSMISSION AND DISTRIBUTION MADE PRACTICAL AND COMMERCIALLY SUCCESSFUL.**

## POINTS OF SUPERIORITY:

Our system is much more simple and consequently more durable than any other, either direct or alternating.

Our generator is much more efficient than any other alternator, requires less attention and absolutely no supplies except lubricant for bearings.

It is practically self-regulating without the loss of energy involved by compounding or compensating. Other multiphase machines require a balance of load.

We have entirely eliminated from our generators the usual sources of trouble, expense and interruption of service: i. e., the revolving armature, commutator, collector rings, brushes, etc.

They can be built for any voltage from 110 for isolated lighting to the high voltages required for power transmission work; in latter case doing away with the expense and loss of step-up transformers; the usual central station machine can be connected at will for either 1,000 or 2,000 volts.

The motors excel in simplicity of construction; in starting torque and simplicity of starting device; in efficiency in the manner in which they take current in proportion to their load, and in uniformity of speed under different conditions of load.

Our transformers insure satisfactory service and the greatest economy. We are prepared to fill all orders promptly, and carry a full stock of transformers in Chicago.

**Patents**—**Our apparatus is novel, different from anything heretofore made, and covered by patents that fully protect us and our customers. We are not infringing patents belonging to others, and shall avail ourselves of the patents under which we operate to protect ourselves from piracy by other manufacturers.**

## STANLEY ELECTRIC MANUFACTURING CO., PITTSFIELD, .... MASS.

**Western Office, 305 Dearborn Street, Chicago, Ill.**

The Royal Electric Co., Montreal, Can., are exclusive licensees for the manufacture of the S. K. C. System in the Dominion of Canada.

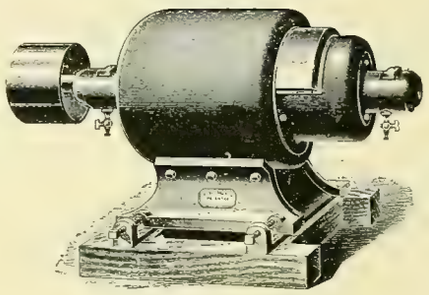
MENOMINEE, MICH.

---

## THE STOREY MOTOR.



. . MAIN OFFICE: . .

**The Storey Motor & Tool Co.,**

YORK AND SEDGELEY AVENUE,

PHILADELPHIA.

Iron Clad. Completely closed in.

DUST and Moisture Proof.

Specially adapted for direct driving machinery.

The application of Motors to machine tools a specialty.

Light weight. Slow and Medium speed.

No exterior magnetism.

CHICAGO OFFICE:

Metropolitan Electric Co.

NEW YORK OFFICE:

112 Liberty Street.

---

## Gordon Primary Battery

EXCELS IN

Long Life, Efficiency,
Economy, Adaptability.
It is Absolutely Non Freezing,
Labor Saving,
Free from Local Action,
Freedom from Gases and Odors.
Superior Generation of Energy.

These Batteries are in use by the most prominent Telephone, Fire Alarm and Railroad Companies of America.

Send for descriptive circular and price list.

We guarantee all our Cells.

MANUFACTURED BY

**The Gordon-Burnham Battery Co.,**

**82 West Broadway, New York.**

Care of WESTERN ELECTRICIAN.

## INSOLVENT NOTICE.

In the matter of
LA CIE ELECTRIQUE ST. JEAN-BAPTISTE
Of the City of Montreal, Canada, P. Q.
In Liquidation.

The undersigned will sell by public auction, in three lots, at the office of Chas. Desmarteau, Liquidator, No. 1598 Notre-Dame St., Montreal, Canada, P. Q., on

*Thursday, the 19th of December 1895,*
*at eleven o'clock in the forenoon,*

All the immovable properties and movable assets of the said company, consisting of:

1. All those tracts and parcels of land situated in St. Jean Baptiste Ward, in the City of Montreal, Province of Quebec, Dominion of Canada, described as follows:

*A.* The northeasterly parts of lots numbers 32 (thirty-two), 33 (thirty-three) and 34 (thirty-four), according to the official subdivision of lot number 10 (ten), of the official cadastre, of the village of St. Jean Baptiste, comprising an area of 4,970 (four thousand nine hundred and seventy) feet, more or less; and bounded toward the northeast by Montana Street, toward the southeast by Rachel Street, toward the northwest by lot number thirty-five of said official subdivision of said lot number ten, and toward the southwest by the remaining parts of said lots numbers thirty-two, thirty-three and thirty-four of said official subdivision of said lot number ten, with buildings and dependencies thereon erected.

*B.* Lots numbers 35 (thirty-five), 36 (thirty-six), 37 (thirty-seven), 38 (thirty-eight), 39 (thirty-nine), 40 (forty), 41 (forty-one) and 42 (forty-two) of said official subdivision of said lot number 10 (ten), comprising an area of 17,296 (seventeen thousand two hundred and ninety-six) feet, more or less; bounded toward the northeast by Montana Street, toward the southwest by lot number sixty-one (*a*) of said subdivision of lot number ten, toward the northwest by lot number forty-three, and toward the southeast by lot number thirty-four of said subdivision of said lot number ten, together with the right of passage in common with adjoining proprietors in the lane at the rear of said lots.

*C.* All engines, boilers, dynamos, tank (45 000 gallons), machinery, belting, shafts and general plant used for manufacturing and generating electricity, as well as the wires and posts, transmitters, meters, lamps, etc., used for distributing and furnishing electric light to the citizens of Montreal and suburbs; the material and stock used for repairing the lines of the company, the whole amounting as per inventory to one hundred and forty four thousand three hundred and seventy-one dollars ($144,371.00).

*D.* The franchise rights and privileges acquired by said company to plant poles in the streets of the City of Montreal.

2. The office furniture and fixtures, etc., amounting to $196 00.

3. The book debts amounting, as per list, to $3,456.00.

The purchaser of the immovable and dependencies described in paragraph 1 shall have to make a cash deposit of five thousand dollars currency ($5,000) at the time of adjudication.

The purchasers of movable assets described in paragraphs 2 and 3 shall have to make a cash deposit of ten per cent. at the time of adjudication.

## GREAT REDUCTION IN TIME TO CALIFORNIA.

Once more the North-Western Line has reduced the time of its trans-continental trains, and the journey from Chicago to California via this popular route is now made in the marvelously short time of three days. Palace Drawing-Room Sleeping cars leave Chicago daily, and run through to San Francisco and Los Angeles without change, and all meals en route are served in Dining cars. Daily Tourist Sleeping car service is also maintained by this line between Chicago and San Francisco and Los Angeles, completely equipped berths in upholstered Tourist Sleepers being furnished at a cost of only $6 00 each from Chicago to the Pacific Coast. Through trains leave Chicago for California at 6 p. m and 10:45 p. m. daily, after arrival of trains of connecting lines from the East and South.

For detailed information concerning rates, routes, etc , apply to ticket agents of connecting lines or address:

*Illustrated with Twenty-two Diagrams.*

By WILLIAM A. WITTBECKER.

**Price in Paper, 25 Cents.**
**Price in Cloth, 50 Cents.**

THE growing demand for simple electrical apparatus in dwelling houses, offices and workshops, and the need of plain instructions whereby any person without a previous knowledge of electricity may be enabled to undertake their successful installation, has prompted the publication of this little book. It is not intended for the amateur who seeks for nothing but experimental work, neither is it expected to enlighten the expert electrician; but to the person who is seeking for information that will assist him in increasing his daily earnings this little volume is addressed.

The information given is above all else practical, and with a close observance of the directions laid down anyone without the slightest knowledge of electricity should be able to do the work described

# KNOWLEDGE IS POWER.

Everyone engaged in the electrical business should keep posted on the developments in the art by reading the latest books on the subject. We are headquarters in the West for electrical books and can fill orders for any work published, promptly on receipt of price. We call your special attention to the following standard books:

**Allsop, F. C.**—Electrical Bell Construction; Treatise on the Construction of Electric Bells, Indicators, and similar apparatus. 177 illustrations....$1.25

**Angell, J.**—Elements of Magnetism and Electricity, with Practical Instructions for the Performance of Experiments, and the construction of cheap apparatus. One hundredth thousand. 160 illustrations....$1.00

**Atkinson, Philip.**—The Elements of Electric Lighting Seventh edition, fully revised, and new matter added. 104 illustrations. 260 pages....$1.50

**Atkinson, Philip.**—The Elements of Dynamic Electricity and Magnetism. 405 pages and 117 illustrations. Second edition....$2.00

**Ayrton, W. E.**—Practical Electricity; a Laboratory and Lecture Course for First-year Students of Electrical Engineering, based on the Practical Definitions of the Electrical Units. With numerous illustrations. Sixth edition....$2.50

**Badt, Lieut. F. B.**—New Dynamo Tenders' Hand Book. This is, as the name indicates, a **New Book**, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers, and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 226 pages, 140 illustrations, flexible cloth binding, size of type page 5½x3 inches....$1.00

**Badt, Lieut. F. B.**—Incandescent Wiring Hand-book. A timely book containing full illustrations for incandescent wiring and complete information concerning methods of running wires, location of safety devices, splices, insulation, testing for faults, wire gauges, general electrical data, calculating sizes of wires, wiring fixtures, elevators, buildings, isolated and central station plants. The only book of the kind published. Type page 5½x3 inches, flexible cloth binding. 66 pages, 35 cuts and 5 tables, 3 of which are 12x18 inches....$1.00

**Badt, Lieut. F. B.**—Bell Hangers' Hand-ook. Just the book for people engaged in selling, installing or handling electric batteries, electric bells, elevators, house or hotel annunciators, burglar or fire alarms, electric gas lighting apparatus, electric heat apparatus. 106 pages, 97 illustrations, flexible cloth binding. Type page 5½x3 inches.$1.00

**Badt, Lieut. F. B.**—Electric Transmission Hand-book. First edition, three thousand copies. 97 pages, 22 illustrations, 27 original tables....$1.00
Gives more *Practical* information on the subject than any work published to date. The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers and Motor Inspectors. With this book anybody may make estimates on the cost of Transmission Plants.

**Bedell, Fred'k and Albert C. Crehore.**—Alternating Currents; An Analytical and Graphical Treatment for Students and Engineers. Second edition. 112 illustrations....$2.50

**Blakesley, T. H.**—Papers on Alternating Currents of Electricity for the use of Students and Engineers. Third edition, enlarged. 12mo, cloth....$1.50

**Bonney, G. E.**—Electro-Plater's Hand Book. A Manual for Amateurs and Young Students on Electro-Metallurgy. 60 illustrations. 208 pages. 12mo, cloth....$1.25

**Bottone, S. R.**—Electrical Instrument Making for Amateurs. A Practical Hand-book, with 48 illustrations. Fourth edition. Enlarged by a chapter on the Telephone....$0.50

**Bottone, S. R.**—The Dynamo, How Made and How Used. A Book for Amateurs. Eighth edition, with additional matter and 39 illustrations....$1.00

**Bottone, S. R.**—Electro-Motors. How Made and How Used. A Handbook for Amateurs and Practical Men. Reduced to....$0.50

**Bottone, S. R.**—How to Manage the Dynamo. A Hand-book for Ship Engineers, Electric Light Engineers and Electro-Platers....$0.60

## THE STANDARD LONG DISTANCE AND EXCHANGE TELEPHONE,

MADISON, WIS.

EMPLOYING MILDE MICROPHONE.

Milde Battery Transmitter. No adjustment required. Will not pack or get out of order.

We invite competition with all other instruments, and send Phones for test to any part of the United States.

It is Absolutely Non-Infringing.
We Guarantee Protection to All Customers

TESTIMONIALS.

We submit among hundreds of others the following testimonials, and call attention to the fact that they are from expert electricians, managers of exchanges and superintendents of railroad telegraph.

"A whisper is distintly heard. We pronounce the Standard perfect." STEELE CO. (N. D.) TEL. CO.

"We talked to Rowell, 75 miles, through storm induction. Have discarded the Bell for Standard." PECOS IRRIGATION & IMP. CO., Eddy, New Mexico.

"Have used Cushman, Harrison and Bell, but consider the Standard far superior." C. A. ROOD, Reedsburg, Wis.

"I should recommend Standard to our people, as against any other with which I am familiar. The test we gave was between St. Paul and Dickinson, 559 miles." O. C. GREENE, Supt. Telg. Northern Pacific Ry.

"Your instruments are working very nicely and every one exceedingly pleased with them. You will have all the business you can do." HOME TELEPHONE CO., Sioux City, Iowa.

"The Standard when known will knock out inferior instuments." U. J. FRY, Supt. Tel. C., M. & St. P. Ry.

"Better than any of the others we have." E. PENNINGTON, Supt. Tel. "Soo" Ry.

"Have given Standard extremely hard test where induction is heavy, with most satisfactory results. J. R. MICHAELS, Supt. Tel. St. Paul & Duluth Ry.

"The Standard will transmit a whisper or a shout with equal clearness." HUMPHREY JONES, Washington C. H., Ohio.

"Their efficiency and working is perfect. We shall use nothing but Standard." GALLAGHER BROS. Meridian, Miss.

## THE NEW AMERICAN LEADS.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickman, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

| Test of a 45-inch Wheel—July 9, 1894. | | | | | |
|---|---|---|---|---|---|
| | Head. | Rev. per Min. | Cu. Ft. per Sec. | Horse Power. | P'r Cent |
| Whole Gate | 16.06 | 119.17 | 141.58 | 205.27 | 79 76 |
| ⅞ " | 16.42 | 122.00 | 127.18 | 195.19 | 82.58 |

**WINTER TOURS TO CALIFORNIA**

In Private Pullman Palace Cars.

The Burlington Route (C. B. & Q. R. R.) announces three personally conducted tours to California. Leave Chicago January 9, February 6 and March 5. The route will be via San Antonio, Tex., El Paso, Los Angeles, San Diego, Santa Barbara, San Francisco, Del Monte and San Jose. Returning via Salt Lake and Rio Grande Scenic Route through Colorado The price of a Ticket includes all necessary expenses. Railroad and sleeping car fare, hotel bills, carriage rides, side trips, etc. The service will be strictly first class in every respect. For pamphlet giving particulars, see any agent of the C. B. & Q. R. R., or write to T. A. Grady, Manager Tours Department, 211 Clark Street, Chicago.

---

**EXCURSION TO NEW YORK CITY.**

Only $18.00 to New York City and return via the Nickel Plate Road. Trains leave Chicago at 1:30 P. M. and 9:20 P.M. on Monday, Dec. 2d, 1895. No time in the year may a visit to the Metropolis be made to better advantage. All amusements at high tide and no discomforts incident to hot weather. Sleeping cars and day coaches through without change. Tickets and berths in sleeping cars may be secured in advance at 111 Adams St., Chicago, Ill. Memo. No. 104.

---

## CALIFORNIA EXCURSIONS.

**PERSONALLY CONDUCTED.**

Leave Chicago via the Burlington Route (C. B. & Q. R. R.) every Wednesday at 6.35 p. m. Route via Denver, Denver & Rio Grande Ry. (the scenic line) and Salt Lake City. These excursions are accompanied by an experienced agent, of the Burlington Route, thoroughly familiar with California. The latest model of Pullman tourist sleeping cars are used. They are fitted with every comfort; carpets, upholstered seats, mattresses, pillows, bed linen, toilet rooms, etc. They lack onlysome of the expensive finish of the Pullmans run on the limited express trains, while the cost per berth is only about one-third. Ask your nearest ticket agent for particulars and descriptive folders, or write to T. A Grady, Manager Burlington Route Excursion Bureau, 211 Clark Street Chicago, Ill.

# Heating by Exhaust Steam,
## WITHOUT BACK PRESSURE,
## BY THE VACUUM SYSTEM.

ADVANTAGES.

1st.—Can be attached to existing plants at little expense.

2nd.—Effects greatest efficiency from the heating surface by the removal of the water and air, preventing water hammer and stagnant circulation.

3rd.—Saves coal by removal of back pressure from engines; water of condensation, etc.

We are owners of the patent and have equipped the largest plants in the United States; over 500 now in use. Will visit your plant and tell you how much we can benefit you, if you so desire. Send for catalogue P.

# TRIUMPH

OF THE

# Tesla System.

That the **TESLA POLYPHASE SYSTEM,**

Operating Incandescent Lights, Arc Lamps, and the celebrated Tesla Motors, from the same circuits, is recognized to be the final solution of the problem of electrical distribution of power from Central Stations is evidenced by the fact that we are to-day selling

**POLYPHASE ALTERNATING CURRENT GENERATORS**

aggregating 3,000 H. P. for each 1,000 H. P. of Single-Phase Alternators.

# Notice Is Given

That induction motors operated by the so-called "Monocyclic" system, offered for sale by the General Electric Co., are, in fact, polyphase motors, and are broadly covered by the patents of Nikola Tesla, owned by the Westinghouse Electric & Manufacturing Co.

The motors and system of distribution advertised by the Stanley Electric Co., of Pittsfield, are also an infringement of the Tesla patents.

Suits have been brought against each of these companies, and are being pressed to a hearing as rapidly as possible.

It is the purpose of the Westinghouse Electric & Manufacturing Co. to bring suits against all users of apparatus infringing the Tesla Patents, in order that the rights of the Company may be enforced.

**Write to Our Nearest District Office.**

**THE ONLY**

## Reflector Plate Alternating Arc Lamp.

**The Helios Electric Company claims:**

That they have more alternating arc lamps in use than all other makes combined.

They guarantee 80 per cent. more available light than is obtained from any other alternating arc lamp.

They guarantee to give as much light as any direct current lamp using the same number of watts.

## Spencer's Improved Alternating Arc Lamp

**Possesses the following advantages:**

Minimum choke in the regulating coil.
Practically no energy absorbed in the regulating device.
Durability of all its parts; not liable to get out of order.
Can be used successfully on all periods.
Starts quickly.

## Spencer's Direct Current Constant Potential Lamp.

**Guaranteed not to see-saw.**

THE

# "CLARK" WIRE.

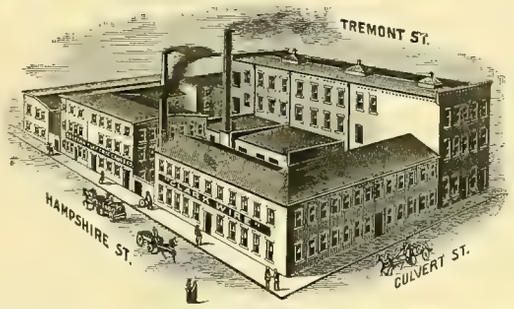
TRADE MARK.

For Switchboard, Railway and Motor use, we make all sizes of Stranded and Flexible Wire and Cables with Clark's Insulation.

The Clark Wire has been before the public and in use for the past nine years, and has met with universal favor. Thousands of miles of this wire have been sold, and are in use throughout the United States and Foreign Countries, and the demand for it is constantly increasing, because it always gives perfect satisfaction.

BRANCH OFFICE:

1649, 1650, 1651 MONADNOCK BLDG.,
CHICAGO, ILLINOIS.



In a Letter from the Inspector of the Boston Fire Underwriters' Union, he states: "A Thoroughly Reliable and Desirable Wire in every respect."

The Rubber used in insulating our Wires and Cables is especially chemically prepared, and will not deteriorate, oxidize or crack, and will remain flexible in extreme cold weather, and is not affected by heat.

We guarantee our Insulation wherever used, Aerial, Under ground or Submarine, and our net prices are as low, if not lower, than any other first-class Insulated Wire.

We shall be pleased to mail Catalogues with Terms and Discounts for Quantities.

## GREAT REDUCTION IN TIME TO CALIFORNIA.

Once more the North-Western Line has reduced the time of its trans-continental trains, and the journey from Chicago to California via this popular route is now made in the marvelously short time of three days. Palace Drawing-Room Sleeping cars leave Chicago daily, and run through to San Francisco and Los Angeles without change, and all meals en route are served in Dining cars. Daily Tourist Sleeping car service is also maintained by this line between Chicago and San Francisco and Los Angeles, completely equipped berths in upholstered Tourist Sleepers being furnished at a cost of only $6.00 each from Chicago to the Pacific Coast. Through trains leave Chicago for California at 6 p. m and 10:45 p. m. daily, after arrival of trains of connecting lines from the East and South.

For detailed information concerning rates, routes, etc, apply to ticket agents of connecting lines or address:

appeared on the scene with an application for a patent on a microphonic transmitter, and according to the rules of the Patent Office no patent could be issued to any of the three until it was determined whether the Drawbaugh claim was valid or not. This was finally decided against Drawbaugh, as it was proved that the Edison carbon transmitter had been in public use for more than two years before Drawbaugh made his application for a patent, and his application was thrown out. A patent was then issued to Berliner on the broad

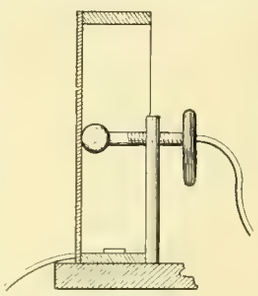

FIG. 44. BERLINER'S FIRST TRANSMITTER.

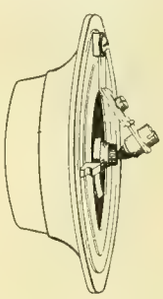

FIG. 45. BERLINER CARBON TRANSMITTER.

principle of the microphone transmitter in November, 1891. In May of the following year a patent was issued to Edison, so that both sides of the interference eventually got their patents—more than fourteen years after the filing of the original applications.

78. Both Berliner and Edison obtained in 1878 patents on special forms of transmitters designed in accordance with the principles laid down in their applications for the broad principle of battery telephones, and the Berliner transmitter especially has been modified out of all semblance to its original form. The broad claim in the Berliner patent is as follows: "The method of producing in a circuit electrical undulations similar in form to sound waves by caus-

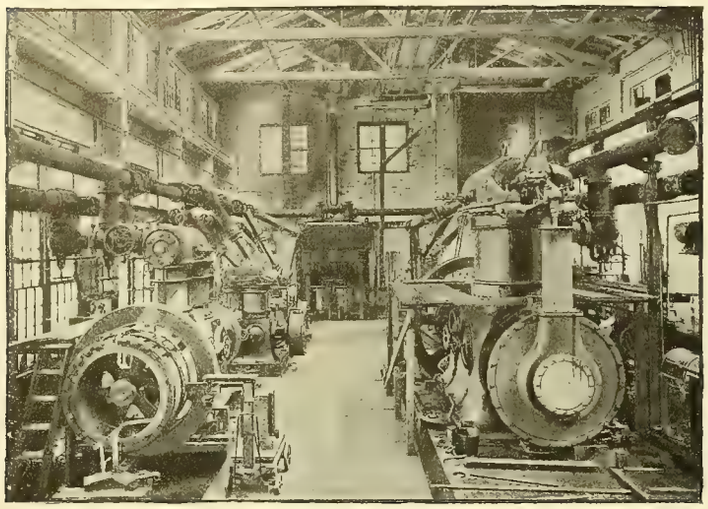
# Something About Westinghouse Engines.



TESTING ROOM.

....TESTING....

Every Westinghouse Engine, from the five horse-power Junior to the seven hundred horse-power Compound, is tested under full load before shipment. Ample facilities for testing the larger sizes of engines will be provided in our new shops, now approaching completion. Our present testing room has accommodations for nine engines at once. The piping is arranged so that the exhaust from any one engine can be turned into a surface condenser, condensed and weighed. The engines are loaded by means of a Prony Friction Brake. Every engine carries its full load from two to four days.

We make running tests on all Junior and Standard engines and economy tests on two engines taken at random from every shop order. We make a careful test of the steam consumption of every Compound engine we build Reports of these tests with sample indicator cards are on file for every Compound engine ever built by us. This means that when you buy a Westinghouse engine you may be sure it is in perfect running order, its adjustments correct, its internal friction not excessive, and its steam consumption well within the limits of good economy. Further, it means that when we make a guarantee as to the economical performance of our engines, it is not a "bluff," but a fact which may be verified by our records, or by a test which the purchaser is free to make in our shops under the supervision of his own expert, and for which we will gladly furnish every facility. In this respect the Westinghouse Machine Company has no imitators. We cordially invite the most critical inspection of our product and methods of manufacture. Our shops are open at all times to engineers and others interested in steam power. If this subject is of interest we will send you a little circular which explains it more fully.

## THE NEW AMERICAN LEADS.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickman, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

# TRIUMPH

## OF THE

# Tesla System.

That the **TESLA POLYPHASE SYSTEM,**

Operating Incandescent Lights, Arc Lamps, and the celebrated Tesla Motors, from the same circuits, is recognized to be the final solution of the problem of electrical distribution of power from Central Stations is evidenced by the fact that we are to-day selling

## POLYPHASE ALTERNATING CURRENT GENERATORS

aggregating 3,000 H. P. for each 1,000 H. P. of Single-Phase Alternators.

# Notice Is Given

That induction motors operated by the so-called "Monocyclic" system, offered for sale by the General Electric Co., are, in fact, polyphase motors, and are broadly covered by the patents of Nikola Tesla, owned by the Westinghouse Electric & Manufacturing Co.

The motors and system of distribution advertised by the Stanley Electric Co., of Pittsfield, are also an infringement of the Tesla patents.

Suits have been brought against each of these companies, and are being pressed to a hearing as rapidly as possible.

It is the purpose of the Westinghouse Electric & Manufacturing Co. to bring suits against all users of apparatus infringing the Tesla Patents, in order that the rights of the Company may be enforced.

**Write to Our Nearest District Office.**

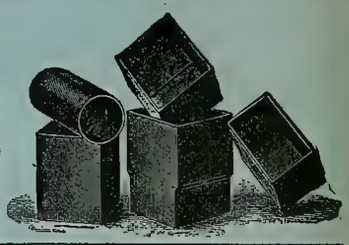
87 Summer St., Boston Mass.



# The S. K. C. Two Phase Alternating Current System.

THE FIRST AND ONLY COMPLETE AND PERFECTED SYSTEM BY WHICH LIGHT AND POWER CAN BE SUPPLIED FROM THE SAME GENERATOR AND CIRCUITS. POWER TRANSMISSION AND DISTRIBUTION MADE PRACTICAL AND COMMERCIALLY SUCCESSFUL.

## POINTS OF SUPERIORITY:

Our system is much more simple and consequently more durable than any other, either direct or alternating.

Our generator is much more efficient than any other alternator, requires less attention and absolutely no supplies except lubricant for bearings.

It is practically self-regulating without the loss of energy involved by compounding or compensating. Other multi-phase machines require a balance of load.

We have entirely eliminated from our generators the usual sources of trouble, expense and interruption of service: i. e., the revolving armature, commutator, collector rings, brushes, etc.

They can be built for any voltage from 110 for isolated lighting to the high voltages required for power transmission work; in latter case doing away with the expense and loss of step-up transformers; the usual central station machine can be connected at will for either 1,000 or 2,000 volts.

The motors excel in simplicity of construction; in starting torque and simplicity of starting device; in efficiency in the manner in which they take current in proportion to their load, and in uniformity of speed under different conditions of load.

Our transformers insure satisfactory service and the greatest economy. We are prepared to fill all orders promptly, and carry a full stock of transformers in Chicago.

**Patents**—Our apparatus is novel, different from anything heretofore made, and covered by patents that fully protect us and our customers. We are not infringing patents belonging to others, and shall avail ourselves of the patents under which we operate to protect ourselves from piracy by other manufacturers.

Send us your orders and they will be promptly filled.

## Electric Engineering & Supply Co.,

**SYRACUSE, N. Y.**

---

**THE ONLY**

## Reflector Plate Alternating Arc Lamp.

**The Helios Electric Company claims:**

That they have more alternating arc lamps in use than all other makes combined.

They guarantee 80 per cent. more available light than is obtained from any other alternating arc lamp.

They guarantee to give as much light as any direct current lamp using the same number of watts.

## Spencer's Improved Alternating Arc Lamp

**Possesses the following advantages:**

Minimum choke in the regulating coil.
Practically no energy absorbed in the regulating device.
Durability of all its parts; not liable to get out of order.
Can be used successfully on all periods.
Starts quickly.

## Spencer's Direct Current Constant Potential Lamp.

**Guaranteed not to see-saw.**

# YOU'RE ENTITLED TO THE WORTH OF YOUR MONEY.

Many purchasers of Electrical Machinery have made mistakes in buying machinery which only had the merit of being sold at a cheap price. Do you ever see any Kester Dynamos or Motors listed in the job lots of discarded second hand machinery? Ask your neighbor how he likes his Kester Motor, or your hotel or factory manager how he likes the Kester Dynamo. In all probability he has one of that make. They are in use in thirty-seven of the states. They are high, very high, in quality and you are entitled to see them demonstrate in actual service their superiority, before you pay your money. Yes, we will be pleased to send you printed matter.

Richards & Meacham, Sole Chicago Agents, 86 La Salle St., Chicago, Ill. KESTER ELECTRIC CO., Terre Haute, Ind.

## GREAT REDUCTION IN TIME TO CALIFORNIA.

Once more the North-Western Line has reduced the time of its trans-continental trains, and the journey from Chicago to California via this popular route is now made in the marvelously short time of three days. Palace Drawing-Room Sleeping cars leave Chicago daily, and run through to San Francisco and Los Angeles without change, and all meals en route are served in Dining cars. Daily Tourist Sleeping car service is also maintained by this line between Chicago and San Francisco and Los Angeles, completely equipped berths in upholstered Tourist Sleepers being furnished at a cost of only $6.00 each from Chicago to the Pacific Coast. Through trains leave Chicago for California at 6 p. m. and 10:45 p. m. daily, after arrival of trains of connecting lines from the East and South.

For detailed information concerning rates, routes, etc., apply to ticket agents of connecting lines or address:

## WINTER TOURS TO CALIFORNIA,

In Private Pullman Palace Cars.

The Burlington Route (C. B. & Q. R. R.) announce three personally conducted tours to California. Leave Chicago January 9, Feb 6, March 5. The route will be via San Antonio, Tex., El Paso, Los Angeles, San Diego, Santa Barbara, San Francisco, Del Monte and San Jose. Returning via Salt Lake and Rio Grande Scenic Route through Colorado. The price of a ticket includes all necessary expenses. Railroad and sleeping car fare, Hotel Bills, carriage rides, side trips, etc. The service will be strictly first class in every respect. For pamphlet giving particulars, see any agent of the C. B. & Q. R. R., or write to T. A. Grady, Manager Tours Department, 211 Clark St., Chicago.

THE SOLID THROUGH TRAINS of the Nickel Plate Road, equipped with the most modernly constructed day coaches and luxurious sleeping and dining cars, illuminated throughout with the famous Pintsch gaslights, and colored porters in charge of day coaches, are some of the features of this popular line that are being recognized by travelers seeking the lowest rates and fast time. J. Y. Calahan, Gen'l Agent, 111 Adams St., Chicago, Ill.

Memo No. 116.

# New Dynamo Tenders' Hand-Book.

By F. B. BADT.

**226 Pages, 140 Illustrations. Flexible Cloth Binding. Size of Type Page 5 1-2x3 inches. Price $1.00.**

This is, as the name indicates, a NEW BOOK, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers, and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 9,000 copies of the old Dynamo Tenders' Hand-Book sold, and over 5,000 of the new.

**Electrician Publishing Co.,**
**6 Lakeside Building, CHICAGO.**

# KNOWLEDGE IS POWER.

Everyone engaged in the electrical business should keep posted on the developments in the art by reading the latest books on the subject. We are headquarters in the West for electrical books and can fill orders for any work published, promptly on receipt of price. We call your special attention to the following standard books:

**Allsop, F. C.**—Electrical Bell Construction; Treatise on the Construction of Electric Bells, Indicators, and similar apparatus. 177 illustrations.....$1.25

**Angell, J.**—Elements of Magnetism and Electricity, with Practical Instructions for the Performance of Experiments, and the construction of cheap apparatus. One hundredth thousand. 160 illustrations.....$1.00

**Atkinson, Philip.**—The Elements of Electric Lighting. Seventh edition, fully revised, and new matter added. 104 illustrations. 260 pages.....$1.50

**Atkinson, Philip.**—The Elements of Dynamic Electricity and Magnetism. 406 pages and 117 illustrations. Second edition.....$2.00

**Ayrton, W. E.**—Practical Electricity; a Laboratory and Lecture Course for First-year Students of Electrical Engineering, based on the Practical Definitions of the Electrical Units. With numerous illustrations. Sixth edition.....$2.50

**Badt, Lieut. F. B.**—New Dynamo Tenders' Hand Book. This is, as the name indicates, a **New Book**, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers, and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 226 pages, 140 illustrations, flexible cloth binding, size of type page 5½x3 inches.....$1.00

**Badt, Lieut. F. B.**—Incandescent Wiring Hand-book. A timely book containing full illustrations for incandescent wiring and complete information concerning methods of running wires, location of safety devices, splices, insulation, testing for faults, wire gauges, general electrical data, calculating sizes of wires, wiring fixtures, elevators, buildings, isolated and central station plants. The only book of the kind published. Type page 5½x3 inches, flexible cloth binding, 66 pages, 35 cuts and 5 tables, 3 of which are 12x18 inches.....$1.00

**Badt, Lieut. F. B.**—Bell Hangers' Hand-ook. Just the book for people engaged in selling, installing or handling electric batteries, electric bells, elevators, house or hotel annunciators, burglar or fire alarms, electric gas lighting apparatus, electric heat apparatus. 106 pages, 97 illustrations, flexible cloth binding. Type page 5½x3 inches.$1.00

**Badt, Lieut. F. B.**—Electric Transmission Hand-book. First edition, three thousand copies. 97 pages, 22 illustrations, 27 original tables.....$1.00
Gives more *Practical* information on the subject than any work published to date The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers and Motor Inspectors. With this book anybody may make estimates on the cost of Transmission Plants.

**Bedell, Fred'k and Albert C. Crehore.**—Alternating Currents; An Analytical and Graphical Treatment for Students and Engineers. Second edition. 112 illustrations.....$2.50

**Blakesley, T. H.**—Papers on Alternating Currents of Electricity for the use of Students and Engineers. Third edition, enlarged. 12mo, cloth.....$1.50

**Bonney, G. E.**—Electro-Plater's Hand Book. A Manual for Amateurs and Young Students on Electro-Metallurgy. 60 illustrations. 208 pages. 12mo, cloth.....$1.25

**Bottone, S. R.**—Electrical Instrument Making for Amateurs. A Practical Hand-book, with 48 illustrations. Fourth edition. Enlarged by a chapter on the Telephone.....$0.50

**Bottone, S. R.**—The Dynamo, How Made and How Used. A Book for Amateurs. Eighth edition, with additional matter and 39 illustrations.....$1.00

**Bottone, S. R.**—Electro-Motors. How Made and How Used. A Handbook for Amateurs and Practical Men. Reduced to.....$0.50

**Bottone, S. R.**—How to Manage the Dynamo. A Hand-book for Ship Engineers, Electric Light Engineers and Electro-Platers.....$0.60

**Buckley, W. J.**—Electric Lighting Plants, their cost and operation. 275 pages, many illustrations and diagrams
Cloth.....$2.00
Paper.....1.00

**Cox, Frank P.**—Continuous Current Dynamos and Motors. An Elementary Treatise for Students and Engineers. Illustrated.....$2.00

**Crocker, F. B., and Wheeler, S. S.**—The Practical Management of Dynamos and Motors. With a special chapter by H. A. Foster. Illustrated. Second edition, revised and enlarged.....$1.00

**Crosby, O. T., and Dr. Louis Bell.**—The Electric Railway in Theory and Practice. A Complete Treatise on the Construction and Operation of Electric Railways, Second edition, revised and enlarged. 183 illustrations.....$2.50

**Desmond, Chas.**—Electricity for Engineers Part I. Constant Current. A clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps Indicator and Measuring Instruments; also a full explanation of the electrical terms used in the work Part II. Alternate Current Apparatus. Containing an explanation of the principles governing the generation of, and a description of the instruments and machinery used in connection with Alternate Electric Currents. Illustrated. Revised edition.....$2.50

**Dyer, A.**—Induction Coils. How Made and How Used. Third edition. Boards.....$0.50

**Fleming, J. A.**—Short Lectures to Electrical Artisans. A course of Experimental Lectures delivered to a Practical Audience. Fourth edition. 74 illustrations.....$1.50

**Fleming, J. A.**—The Alternate Current Transformer in Theory and Practice. Vol. I. The Induction of Electric Currents, 500 pages, fully illustrated and with copious index. Second edition.....$3.00
Synopsis of contents: Chapter 1. Introductory. 2. Electro-Magnetic Induction. 3. The Theory of Simple Periodic Currents. 4. Mutual and Self Induction. 5. Dynamical Theory of Current induction.
Vol. II. The Utilization of Induced Currents, 8vo. cloth. London, 1892.....$5.00

**Gore, G.**—The Art of Electro-Metallurgy, including all Known Processes of Electro Deposition. Fourth edition.....$2.00

**Gordon.**—School Electricity. Sources, Currents, Measurement, Telegraphy, Telephony, Lightning, Electrolysis, Induction, etc. 262 pages, with 140 illustrations.....$2.00

**Grier, Thos. G.**—Wiring for Motor Circuits. A handy little pamphlet containing tables for wiring and for motor service, arranged in convenient form for ready reference.$1.00

**Haskins, C. H.**—The Galvanometer and its Uses. A Manual for Electricians and Students. Fourth edition, revised ..$1.50

**Haskins.**—Transformers. Their Theory, Construction and Application Simplified. 38 illustrations.....$1.25

**Hawkins, C. C. and F. Wallis.**—The Dynamo, its Theory, Design and Manufacture. 190 illustrations.....$3.00

**Hering.**—Practical Directions for Winding Magnets and Dynamos. 12mo. cloth, reprint without additions.....$1.25

**Hopkins, Geo. M.**—Experimental Science. Elementary, Practical and Experimental Physics, 650 Illustrations $4.00

**Hopkinson.**—Original Papers on Dynamo Machinery and Allied Subjects. Illustrated.....$1.00

**Hopkinson, Dr. John.**—Dynamic Electricity; Its Modern Use and Measurement, chiefly in its Application to Electric Lighting and Telegraphy.....$0.50

**Hospitalier, E.**—Domestic Electricity for Amateurs. Translated from the French. With additions by C. J. Wharton. With illustrations.....$2.50

**Houston, Prof. E. J.**—A Dictionary of Electrical Words, Terms and Phrases. Third edition, re-written and greatly enlarged. Large 8vo. 562 pages, and 570 illustrations.....$5.00

**Kapp, Gisbert.**—Electric Transmission of Energy and its Transformation, Subdivison and Distribution. A practical handbook. Third edition.....$3.00

**Kapp, Gisbert.**—Alternate Current Machinery Illustrated.$0.50
[Vol. 96 Van Nostrand's Science Series.]

**Kapp, Gisbert.**—Alternating Currents of Electricity. Their Generation, Measurement, Distribution and Application. Authorized American ed. With an introduction by William Stanley, Jr. Illustrated.....$1.00

**Kapp, Gisbert.**—Dynamos, Alternators and Transformers. 138 illustrations.....$4.00

**Kempe, H. R.**—A Handbook of Electrical Testing. Fifth edition. 200 illustrations. 8vo. cloth. London, 1892.....$7.25
In this edition there is a considerable amount of new matter; the old matter has been thoroughly revised.

**Kempe, H. R.**—The Electrical Engineer's Pocket Book. Modern Rules, Formulæ, Tables and Data. 32mo, leather.....$1.75

**Lockwood, T. D.**—Electricity, Magnetism and Electric Telegraphy. A Practical Guide and Handbook of General Information for Electrical Students, Operators and Inspectors. 376 pages, 152 Illustrations.....$2.50

**Lockwood, T. D.**—Electrical Measurement and the Galvanometer; its Construction and Use. Second edition... $1.50

**Lockwood, T. D.**—Practical Information for Telephonists. 12mo, cloth. N. Y.....$1.00

**Meadowcroft, W. H.**—The A. B. C. of Electricity. 36 Illustrations.....$0.60

**Martin, T. C.**—Inventions, Researches and Writings of Nikola Tesla. With special reference to his work in polyphase currents and high potential lighting. 500 pp. 300 Illustrations, second edition.....$4.00

MANUFACTURERS OF THE

## Standard Loud-Speaking, Long-Distance and Exchange Telephone.

Perfect in Detail, of Highest Efficiency and Best Possible Electrical and Mechanical Construction.

Equipped with **Our New Magneto Bell** provided with specially powerful Generator having large field magnets of best quality of magnetic steel, laminated armatures with ample wire space, and combining the qualities of large quantity and high voltage; polarized bells with centrally pivoted armatures (the patent on same having now expired) and high co-efficient of self-induction in proportion to winding, the whole adapted to meet the most exacting requirements of service.

**Will ring bells on long lines of high resistance. Will ring a large number of bells in series on short lines. Will ring on a line various makes of bells with different windings. Will work with any make of switchboard. Will drop a shutter on long lines, etc., etc.**

Sole Licensees for sale of **Milde Battery Transmitter** in the United States. Patent granted April 17th, 1894. For simplicity, small dimensions, entire multi-contact, and powerful transmission, it has no equal. No adjustment required. Will not pack or get out of order.

## Standard Telephone Exchange Switchboards

Manufactured and controlled by us are the most rapid and efficient apparatus of the kind now before the public, embracing novel and original features possessed by no others; require where power generator is used but three moves to answer a subscriber's call, ring number wanted, and connect the lines. Estimates for complete equipment of exchanges and toll line systems promptly furnished.

## DOMESTIC ELECTRICAL WORK.

Concise and Practical Explanations for Plumbers, Tinners and Hardware Dealers on How to Wire Buildings for Bells, Alarms, Annunciators, and for Gas Lighting from Batteries.

*Illustrated with Twenty-two Diagrams.*

By WILLIAM A. WITTBECKER.

**Price in Paper, 25 Cents.**
**Price in Cloth, 50 Cents.**

THE growing demand for simple electrical apparatus in dwelling houses, offices and workshops and the need of plain instructions whereby any person without a previous knowledge of electricity may be enabled to undertake their successful installation, has prompted the publication of this little book. It is not intended for the amateur who seeks for nothing but experimental work, neither is it expected to enlighten the expert electrician; but to the person who is seeking for information that will assist him in increasing his daily earnings this little volume is addressed.

The information given is above all else practical, and with a close observance of the directions laid down anyone without the slightest knowledge of electricity should be able to do the work described

## THE NEW AMERICAN LEADS.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickman, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

**Test of a 45-in. Wheel—July 9, '94.**

| | Head | Rev. per Min. | Cu. Ft. per Sec. | H. P. | Per Cent. |
|---|---|---|---|---|---|
| Whole Gate | 16.16 | 119.17 | 141.58 | 205.27 | 79.76 |

# TRIUMPH

## OF THE

# Tesla System.

That the **TESLA POLYPHASE SYSTEM,**

Operating Incandescent Lights, Arc Lamps, and the celebrated Tesla Motors, from the same circuits, is recognized to be the final solution of the problem of electrical distribution of power from Central Stations is evidenced by the fact that we are to-day selling

## POLYPHASE ALTERNATING CURRENT GENERATORS

aggregating 3,000 H. P. for each 1,000 H. P. of Single-Phase Alternators.

# Notice Is Given

That induction motors operated by the so-called "Monocyclic" system, offered for sale by the General Electric Co., are, in fact, polyphase motors, and are broadly covered by the patents of Nikola Tesla, owned by the Westinghouse Electric & Manufacturing Co.

The motors and system of distribution advertised by the Stanley Electric Co., of Pittsfield, are also an infringement of the Tesla patents.

Suits have been brought against each of these companies, and are being pressed to a hearing as rapidly as possible.

It is the purpose of the Westinghouse Electric & Manufacturing Co. to bring suits against all users of apparatus infringing the Tesla Patents, in order that the rights of the Company may be enforced.
